

Niko Access Control - service unit for programming a complete access control system

10-870

4 year warranty

With the service unit, the entire installation can be very easily programmed by one person without requiring access to the individual residential units. You can also use the unit to analyse the installation and to detect errors.

Technical data

Niko Access Control - service unit for programming a complete access control system

to support the programming of a NACS bus installation - display of bus protocols via numerical codes - analysis and control of the bus protocols - change parameters for external and internal units - perform basic functions on the NACS bus - (de)activate call suppression - display of the current bus voltage - programme and delete bell push buttons - test speech connections - from the service telephone to the external unit - from the service telephone to the residential station - test the bus installation in service mode - (de)activate a programming lock - supports error analyzes - colour: grey - 3-wire technology required - input current (3-wire): $I(a) = 0.4\text{mA}$, $I(P) = 10\text{mA}$ in quiescent state - maximum input current: $I(P_{\text{max}}) = 13\text{mA}$ - allowed ambient temperature: 0 to 40°C - dimensions : H 200 x W 50 x D 50mm

- Marking: CE
