Production

The Walraven Group has production facilities in various countries, with modern machines which are often designed in-house. Each production company has its own speciality so that products can be manufactured in the most efficient manner.

Almost all of our tooling and moulds are produced in our own tool making facility. Walraven then manages the entire process - from product development to manufacture - and can quickly respond to developments in the market.

Innovation

The development of new products is always our priority. With our primary focus being on customer satisfaction. Think of comfort, time-saving during assembly and the highest degree of reliability when operational. A large number of innovations and patents is the result. Our innovation is not just limited to product development. Also our marketing is pushing the boundaries.

We develop and produce customer-specific or project-related products too. In addition, many of our standard products can be supplied in a special size or with a special surface treatment.

Quality

Our organization is ISO 9001:2015 certificated. This way we continuously improve operational processes, and thus the quality of the entire organization.

Our products meet the highest quality standards and are approved by many international institutes, such as:

kiwa

Our fire protection products meet the highest international quality standards and are approved by many European certification institutes.

CSTB

DIBt

Maximum allowed load:

From most of our products a maximum allowed load is included in the article tables. Stated values are determined by:

- a by Walraven developed measuring method
- the measuring method described in the testing prescriptions RAL-GZ 655, which is set up by the 'Gütegemeinschaft Rohrbefestigung'. If the product is provided with the 'RAL-Gütezeichen', the test results are checked by an independent testing institute.

For plastic clamps the breaking load is included.

Force directions (F) x, y and z (at 20 °C)

Fa = maximum allowed load

Fb = breaking load

Force directions Anchoring

V Rks = Characteristic resistance value in non cracked or cracked concrete (kN) shear load with standard embedment depth

N Rks = Characteristic resistance value in non cracked or cracked concrete (kN) tension load with standard embedment depth

Catenary Wire System for multiple applications

Dobygrip Infopage

Strong, simple and fast

The BIS DobyGrip catenary wire system is the quick and efficient alternative to threaded rods and chains. You can install it up to 6x faster.

The system is ideal for static objects which need to be hung in high areas. For example cable channels, suspended ceilings, air ducts and light fittings.

Suitable for use in multiple applications and markets including HVAC, electrical, displays, lighting, signage and vineyards.

Easy to use

- 1. Pass cable tail through BIS DobyGrip in the direction of the arrow on casing.
- 2. Pass cable tail through suspension point of supported item, pull cable back through BIS DobyGrip. Height can be easily adjusted by using external cable release, infinitely adjustable.

Lightweight

Assembly and handling on site are much simpler. Reduces the need for working at height with unwieldy fixing materials.

4 versions for 1001 purposes

The various versions make the system very flexible and widely applicable. Every type of BIS DobyGrip cable is available in various lengths. Reels of wire can also be supplied.

High safe working loads

The BIS DobyGrip cable is available in 2 different thicknesses and is suitable for both vertical and diagonal loads. Suspension with the BIS DobyGrip system is not only strong, but also reduces vibration.
