FR1 mounting instructions

Step 1.

Lift the drive out from the carton and remove the packaging. The magnetic cores and cable ties are only included in EMI version drive.

Step 2.

Screw mounting: Attach the drive to the mounting plate with two M5x20 (or 3/16 in.) screws and two M5 (or 3/16 in.) nuts. The opening dimension on the mounting plate should follow required dimension (refer to the dimension drawing in Table 1 of this document).

DIN Rail mounting: Lift the drive at an angle about 30 degrees. Align the top hooks of drive DIN rail mounting slot with DIN rail top edge. Push down and rotate the drive to clip the bottom hooks on the bottom DIN rail edge.

Step 3. (EMI version only):

The input wires (including 3 line wires and 1 input grounding wire) should run through the input magnetic core before connecting to input terminal block and grounding hole. Use a cable tie to tie the input magnetic cores to the input wires. The output wires (only 3 motor wires) should run through the output magnetic core before connecting to output terminal block.

The output grounding wire should not run through the output magnetic core. Use a cable tie to tie the output magnetic cores to the output wires. The maximum distance between input / output magnetic cores top surface and drive bottom surface is 100 mm (3.94 in.). The input magnetic core and output magnetic core are the same for FR1.

FR2 mounting instructions

Step 1.

Lift the drive out from the carton, remove the packaging. The magnetic cores and cable ties are only included in EMI version drive.

Step 2.

Screw mounting: Attach the drive to the mounting plate with four M5X20 (or 3/16 in.) screws and four M5 (or 3/16 in.) nuts. The opening dimension on the mounting plate should follow required dimension (refer to the dimension drawing in the instruction leaflet).

DIN Rail mounting: Lift the drive at an angle about 30 degrees. Align the top hooks of drive DIN rail mounting slot with DIN rail top edge. Push down and rotate the drive to clip the bottom hooks on the bottom DIN rail edge.

Step 3. (EMI version only):

The input wires (including 3 line wires and 1 input grounding wire) should run through the input magnetic core before connecting to input terminal block and grounding hole. Use a cable tie to tie the input magnetic cores to the input wires. The output wires (only 3 motor wires) should run through the output magnetic core before connecting to output terminal block.

The output grounding wire should not run through the output magnetic core. Use a cable tie to tie the output magnetic cores to the output wires. The maximum distance between input / output magnetic cores top surface and drive bottom surface is 100 mm (3.94 in.). The height of input magnetic core is bigger than output magnetic core for 3 phase FR2 EMI version, but they are the same for 1 phase FR2 EMI version.

FR3 mounting instructions

Step 1.

Lift the drive out from the carton, remove the packaging. The magnetic cores and cable ties are only included in EMI version drive.

Step 2.

Screw mounting: Attach the drive to the mounting plate with four M5X20 (or 3/16 in.) screws and four M5 (or 3/16 in.) nuts. The opening dimension on the mounting plate should follow required dimension (refer to the dimension drawing in the instruction leaflet).

DIN Rail mounting: Lift the drive at an angle about 30 degrees. Align the top hooks of drive DIN rail mounting slot with DIN rail top edge. Push down and rotate the drive to clip the bottom hooks on the bottom DIN rail edge.

Step 3. (EMI version only):

The input wires (including three line wires and one input grounding wire) should run through the input magnetic core before connecting to input terminal block and grounding hole. Use a cable tie to tie the input magnetic cores to the input wires.

For 3-phase FR3 EMI version, the output wires (only three motor wires) should run through the output magnetic core before connecting to output terminal block. The output grounding wire should not run through the output magnetic core. Use a cable tie to tie the output magnetic cores to the output wires. For 1-phase FR3 EMI version, there is no output magnetic core. The motor wires and output grounding wire can be connected to corresponding terminals directly.

The maximum distance between input / output magnetic cores top surface and drive bottom surface is 100 mm.

The input magnetic core and output magnetic core are the same for 3-phase FR3 EMI version.

FR4 mounting instructions

Step 1.

Lift the drive out from the carton, remove the packaging. The magnetic cores and cable ties are only included in EMI version drive.

The output grounding wire should not run through the output magnetic core. Use a cable tie to tie the output magnetic cores to the output wires. The maximum distance between input / output magnetic cores top surface and drive bottom surface is 100 mm (3.94 in.). The height of input magnetic core is bigger than output magnetic core for FR4. .

Step 2.

Screw mounting: Attach the drive to the mounting plate with four M5x20 (or 3/16 in.) screws and four M5 (or 3/16 in.) nuts. The opening dimension on the mounting plate should follow required dimension (refer to the dimension drawing in the instruction leaflet).

Step 3. (EMI version only):

The input wires (including 3 line wires and 1 input grounding wire) should run through the input magnetic core before connecting to input terminal block and grounding hole. Use a cable tie to tie the input magnetic cores to the input wires. The output wires (only 3 motor wires) should run through the output magnetic core before connecting to output terminal block.

Mounting instruction for option cards

Step 1.

For enclosed type:

Remove the front cover (1) from NEMA 1 kit then remove the terminal cover (2) from drive.

For open type:

Only remove the terminal cover.

Step 2.

Remove the option card port label and four snap covers from the drive.

Step 3.

Connect the cable to option card connector (3) and MCU board connector (4).

Step 4.

Clamp the cable with the optional card port. Mount the option card to the drive by inserting the four snaps into the slots on drive.

Step 5.

For enclosed type:

Install the terminal cover (1) to the drive then install the front cover (2) to NEMA 1 kit.

For open type:

Only install the terminal cover to the drive.

Notes:

① Line and motor cable size is selected according to UL 508C Table 40.3 for copper conductor rated 75°C. Use only with copper wire rated 75°C here. Size requirements for other different wire types are defined in the National Electrical Code®, ANSI/NFPA® 70.

② Earthing conductor size is determined by the maximum overcurrent device rating used ahead of the drive according to UL 508C Table 6.4.

③ If power cubes or bypass are used, a UL listed Class RK5, J, T or equivalent fuse is recommended.

Notes:

- ① Line and motor cable size is selected according to IEC 60364-5-52:2009 Table B.52.4 for copper conductor with PVC insulation with a wiring condition of ambient temperature 30°C in air and an installation method of "B2" (cables in conduit and cable trunking systems). For other wiring conditions, please refer to the standard of IEC 60364-5-52:2009 for suitable cable sizes.
- ② Earthing conductor size is determined by the cross-sectional area of phase conductors according to IEC/EN 61800-5-1:2007 Table 5. So if phase conductor size is changed, earthing conductor size should also be changed accordingly.
- ③ If power cubes or bypass are used, a Class gG/gL fuse is recommended.

Notes:

The above wiring demonstrates a SINK configuration. The SW2 position 1 is set to ON. If a SOURCE configuration is desired, wire 24 V to CMA and close the inputs to ground. When using the +10 V for AI1, SW2 position 2 set to ON.

① AI1+ support 10 K potentiometer.

UL cautions, warnings, and instructions

Wiring warnings for electrical practices and wire sizes

The Cautions, Warnings, and Instructions in this section summarize the procedures necessary to ensure an inverter installation complies with Underwriters Laboratories® guidelines.

(en)

Warning!

Use 60/75°C Cu wire only or equivalent.

(en)

Warning!

Open type equipment.

(en)

Warning!

Suitable for use on a circuit capable of delivering not more than 5,000 rms symmetrical amperes:

- 240 V maximum for DM1-32 models
- 500 V maximum for DM1-34 models
- 600 V maximum for DM1-35 models

Circuit breaker and fuse sizes

The adjustable frequency drive's connections to input power must include UL listed inverse time circuit breakers with 600 V rating, or UL listed fuses.

Wire connectors

(en)

Warning!

Field wiring connections must be made by a UL listed and CSA certified ring lug terminal connector sized for the wire gauge being used. The connector must be fixed using the crimping tool specified by the connector manufacturer.

Motor overload protection

DM1 adjustable frequency drives provide solid-state motor overload protection, which depends on the proper setting of the following parameter: P5.1.2 "current limit."

"The setting range is (0.2 * rated current) to (2 * rated current).

(en)

Warning!

When two or more motors are connected to the inverter, they cannot be protected by the electronic overload protection. Install an external thermal relay on each motor.

The crossed-out wheeled bin symbol indicates that waste electrical and electronic equipment should not be discarded together with un-separated household waste, but must be collected separately. The product should be handed in for recycling in accordance with the local environmental regulations for waste disposal.

By separating waste electrical and electronic equipment, you will help reduce the volume of waste sent for incineration or land-fills and minimize any potential negative impact on human health and environment.
