1 General

1.1 About this document

The language of the original operating instructions is French. All other languages of these instructions are translations of the original operating instructions.

These installation and operating instructions are an integral part of the product. They must be kept readily available at the place where the product is installed. Strict adherence to these instructions is a precondition for the proper use and correct operation of the product.

These installation and operating instructions correspond to the relevant version of the product and the underlying safety standards valid at the time of going to print.

EC declaration of conformity:

A copy of the EC declaration of conformity is a component of these operating instructions.

If a technical modification is made on the designs named there without our agreement, this declaration loses its validity.

2 Safety

These installation and operating instructions contain important information which must be adhered to during installation, operation and maintenance. For this reason, these instructions must, without fail, be read by the service technician and the responsible specialist/operator before installation and commissioning.

It is not only the general safety instructions listed under the main point "safety" that must be adhered to but also the special safety instructions with danger symbols included under the following main points.

2.1 Symbols and signal words in the operating instructions

Symbols:

General danger symbol

Danger due to electrical voltage

NOTE

Signal words:

DANGER!

Acutely dangerous situation.

Non-observance results in death or the most serious of injuries.

WARNING!

The user can suffer (serious) injuries. 'Warning' implies that (serious) injury to persons is probable if this information is disregarded.

ATTENTION!

There is a risk of damaging the product/unit. 'Caution' implies that damage to the product is likely if this information is disregarded.

NOTE: Useful information on handling the product. It draws attention to possible problems.

Information that appears directly on the product, such as.

- Direction of rotation arrow,
 - Marks identifying connections,
 - Rating plate,
 - Warning stickers,
- must be strictly complied with and kept in legible condition.

2.2 Personnel qualifications

The installation, operating and maintenance personnel must have the appropriate qualifications for this work. Area of responsibility, terms of reference and monitoring of the personnel are to be ensured by the operator. If the personnel are not in possession of the necessary knowledge, they are to be trained and instructed. This can be accomplished if necessary by the manufacturer of the product at the request of the operator.

2.3 Danger in the event of non-observance of the safety instructions

Non-observance of the safety instructions can result in risk of injury to persons and damage to the environment and the product/unit. Non-observance of the safety instructions results in the loss of any claims to damages. In detail, non-observance can, for example, result in the following risks:

- Danger to persons due to electrical, mechanical and bacteriological factors,
- Damage to the environment due to leakage of hazardous materials,
- Property damage,
- Failure of important product/unit functions,
- Failure of required maintenance and repair procedures.

2.4 Safety consciousness on the job

The existing directives for accident prevention must be adhered to.

Danger from electrical current must be eliminated. Local directives or general directives [e.g. IEC, VDE etc.] and instructions from local energy supply companies must be adhered to.

2.5 Safety instructions for the operator

This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.

Children should be supervised to ensure that they do not play with the appliance.

- If hot or cold components on the product/the unit lead to hazards, local measures must be taken to guard them against touching.
- Guards which protect personnel from coming into contact with moving components (e.g. the coupling) must not be removed while the product is in operation.

- Leakages (e.g. from the shaft seals) of hazardous fluids (which are explosive, toxic or hot) must be led away so that no danger to persons or to the environment arises. National statutory provisions are to be complied with.
- Danger from electrical current must be eliminated. Local directives or general directives [e.g. IEC, VDE etc.] and instructions from local energy supply companies must be adhered to.

2.6 Safety instructions for installation and maintenance work

The operator must ensure that all maintenance and installation work is carried out by authorised and qualified personnel, who are sufficiently informed from their own detailed study of the installation and operating instructions. Work on the product/unit must only be carried out when at a standstill. It is mandatory that the procedure described in the installation and operating instructions for shutting down the product/unit be complied with.

Immediately on conclusion of the work, all safety and protective devices must be put back in position and/or recommissioned.

2.7 Unauthorised modification and manufacture of spare parts

Unauthorised modification and manufacture of spare parts will impair the safety of the product/personnel and will make void the manufacturer's declarations regarding safety. Modifications to the product are only permissible after consultation with the manufacturer.

Original spare parts and accessories authorised by the manufacturer ensure safety. The use of other parts will absolve us of liability for consequential events.

2.8 Improper use

The operating safety of the supplied product is only guaranteed for conventional use in accordance with Section 4 of the operating instructions. The limit values must on no account fall under or exceed those values specified in the catalogue/data sheet.

3 Transport and intermediate storage

When you receive the equipment, check that it has not been damaged during transport. If you notice a fault, take all necessary action with the carrier within the time allowed.

- Unpack the lifting unit and recycle or dispose of the packaging in an environmentally responsible manner.
- Be sure to check the condition of the product upon delivery.

CAUTION! Storage environment may cause damage!

If the equipment is to be installed at a later date, store it in a dry place and protect it from impacts and any external stresses (humidity, frost etc.).

Temperature range for transport and storage: -30°C to +60°C.

Handle the system with care so as not to damage the product before installation.

4 Applications

This device is a compact lifting unit designed for draining wastewater coming from a toilet via horizontal drainage, from a washbasin, from a shower* or from a bidet*. (*: depending on the model).

This device complies with the standard EN 12050-3 and with the European standards for electrical safety and electromagnetic compatibility.

DANGER! Risk of explosion!

Do not use this system to lift flammable or explosive liquids.

5 Product information

5.1 Type key (Fig. 1)

Example: HiSewlift 3-I35	
HiSewlift	Version HiSewlift: Standard version
3	Product grade 1: Standard 3: Efficient 5: Premium
I	Front-wall installation I: Can be installed in a frame in front of the wall
3	Number of connections + toilet
5	Delivery head

5.2 Technical data

Hydraulic data	HiSewlift 3-15	HiSewlift 3-35	HiSewlift 3-I35
Maximum vertical delivery	5 m	5 m	5 m
Maximum Horizontal delivery	90 m	90 m	90 m
Maximum altitude	1000 m	1000 m	1000 m
DN of suction connection	DN40	DN40	DN40
DN of pressure connection	DN32-28-22	DN32-28-22	DN32-28-22
Number of connections	1 for toilet + 1	1 for toilet + 3	1 for toilet + 3
Temperature range			
Fluid temperature range	+5°C to +35°C	+5°C to +35°C	+5°C to +35°C
Ambient temperature	Max. +40°C	Max. +40°C	Max. +40°C
Electrical data			
Motor protection rating	IP 44	IP 44	IP 44
Insulation class	Class I	Class I	Class I
Frequency	50 Hz	50 Hz	50 Hz
Voltage	220/240 V	220/240 V	220/240 V
Rated current	1.9 A	1.9 A	1.9 A

5.3 Included in delivery

- Lifting system
- Operating manual

For HiSewlift 3-15: outlet elbow (x1), 3-outlet bushing (x1), clamp 32x55 (x4), clamp 25x40 (x1), clamp 20x32 (x1), hose (x1), Ty Wrap (x1), clamp 90x110 (x1), inlet elbow (x1), screw (x2), fixation strip (x2).

For HiSewlift 3-35: outlet elbow (x1), 3-outlet busching (x1), clamp 32x55 (x8), clamp 25x40 (x1), clamp 20x32 (x1), hose (x1), Ty Wrap (x1), clamp 90x110 (x1), inlet bushing (x3), lateral inlet bushing (x1), vis(x2), fixation strip(x2).

For HiSewlift 3-I35: outlet elbow (x1), 3 outlet bushing(x1), clamp 32x55 (x4), clamp 25x40 (x1), clamp 20x32 (x1), inlet bush (x1), lateral inlet plug (x2), screw (x2), fixation strip(x2).

5.4 Description

HiSewlift 3-15 and HiSewlift 3-35 (Fig. 2)

- 1 - Bushing
- 2 - Elbow
- 3 - 3-outlet bushing
- 4 - Plug
- 5 - Fixation strip (x2)
- 6 - Screw (x2)
- 7 - Screw clamp (x2 for each part number)
- 8 - Hose
- 9 - Ty-Wrap

HiSewlift 3-I35 (Fig. 3)

- 1 - Bushing
- 2 - Elbow
- 3 - 3-outlet bushing
- 4 - Plug
- 5 - Fixation strip (x2)
- 6 - Screw (x2)
- 7 - Foam foot (x4)
- 8 - Screw clamp (x2 for each part number)

6 Description and function

6.1 Description of the product (see figures)

Compact lifting unit for domestic wastewater which cannot flow naturally into the sewer or natural outfall.

6.2 Function of the product

Automatic collection and drainage of domestic wastewater.

7 Installation and connections

DANGER! Risk of fatal injury!

Any improper installation or improper electrical connection may have fatal consequences. Danger from electrical current must be eliminated.

- Installation and electrical connection work must always be carried out by qualified technical personnel and in accordance with the applicable regulations.
- Comply with accident prevention regulations.
- Follow the instructions of the local energy supply company!
- The comminutor must be in the same room as the toilet and the other sanitary installations connected.
- The device must be easily accessible for inspection, maintenance and repair.
- The installation and functioning of your device must comply with local regulations and the standard EN 12056-4.
- To make the most of the latest developments for noise reduction included in the design of this device, it is important to:
 - Install the tank so that it is not touching the walls of the room if possible,
 - Position the tank on a completely flat surface so as not to impair the function of the anti-vibration supports,
 - Secure the drainage piping correctly, avoiding distances greater than one metre between fixation points.
- HiSewlift 3-15 and HiSewlift 3-35 (Fig. 4 and 6)
- HiSewlift 3-I35 (Fig. 5 and 6)

7.1 Hydraulic connections

- HiSewlift 3-15 and HiSewlift 3-35 (Fig. 7)
- HiSewlift 3-I35 (Fig. 8)

General connection instructions

- Use flexible, braid-reinforced hose piping or rigid piping.
- The system must not bear the weight of the pipes.
- Seal the piping well using appropriate products.

NOTE: The air cushion in the connection pipe may cause problems with flow and blockage. To prevent any blockage, the inlet pipe should be purged at its highest point.

Installing the lifting unit before putting the cover back on the frame facilitates the installation and inspection of the connections.

Suction connection

- The diameter of the suction pipe must never be less than the port on the system.

7.2 Electrical connection (Fig. 9)

WARNING! Risk of electric shock!

Danger from electrical current must be eliminated.

- Have all electrical work carried out by a qualified electrician only!
- Before any electrical connection is made, the unit must be de-energised (switched off) and protected against unauthorised restarting.
- To ensure safe installation and operation, the unit must be earthed correctly with the earth terminals of the power supply.

ATTENTION! risk of damaging the product/unit!

An error in the electrical connection will damage the motor.

The power cable must never touch the piping or the system, and must be kept away from any moisture.

- Do not switch on the power supply until the electrical connections have been fully completed.
- When positioning the device, make sure that the mains power plug is accessible.
- The power supply circuit of the device must be earthed (class I) and protected by a high sensitivity residual-current device (30 mA).
- The connection must be used solely to supply power to the device.
- If the cable of this device is damaged, it must be replaced by the manufacturer or the manufacturer's customer service.
- Observe the requirements of the standard applicable in the country of use (in France, for example: NF C 15-100) governing electrical safety zones in bathrooms.

8 Commissioning

- Flush the toilet several times. The toilet bowl outlet must be free of leaks.
- Switch on the power supply to the system.
- Check that there are no leaks at the connections to the sanitary devices connected to the lifting unit.
- Check that the current consumed is less than or equal to the rated current.

9 Maintenance

All maintenance work must be carried out by authorised and qualified personnel!

WARNING! Risk of electric shock!

Danger from electrical current must be eliminated.

Before any electrical work, the unit must be DE-ENERGISE (switched off) and protected against unauthorised restarting.

In the event of prolonged absence, be sure to cut off the mains water supply to the house and protect the installation from freezing.

Cleaning/descaling

To descale and clean the lifting unit, regularly use a descaling agent specially designed to remove scale without damaging the internal components of your device.

10 Faults, causes and remedies

WARNING! Risk of electric shock!

Before any work on the system, DE-ENERGISE the unit by disconnecting the electrical supply to the system, and prevent unauthorised restarting. The indicator light being off does not mean that the pump is de-energised.

Faults	Causes	Remedies
The motor will not start	Device is not plugged in	Plug in the device
	Faulty power supply	Check the power supply
	Problem with motor or control system	Contact an approved repair technician
The motor is running with a rattling noise or is humming but not running	Motor blocked by a foreign object	Remove the foreign object
	Problem with motor or control system	Contact an approved repair technician
The device keeps stopping and starting	The connected sanitary devices are leaking	Check the upstream installations
	The non-return valve is leaking	Clean or replace the non-return valve.
The motor is running correctly but does not stop or runs for a very long time	The height or length of the drain is too great (friction loss)	Review the installation
	Hydraulic problem (clogging)	Contact an approved repair technician
The device has stopped	The device was running for too long (high temperature cut-out)	Wait for reset, then contact an approved repair technician if necessary
The motor is running jerkily and the water in the toilet bowl is going down slowly	The vent in the cover is blocked up	Unblock the vent hole
	Motor problem	Contact an approved repair technician
Turbid water flowing back into the shower (device with lateral inlets)	Shower connected too low relative to the comminutor	Review the installation
	Flaps on lateral inlets clogged	Clean the flaps, then contact an approved repair technician if necessary

If you cannot remedy the fault, please contact Wilo customer service.

11 Spare parts

All spare parts should be ordered directly from WILO customer service.

To prevent errors, always quote the data on the pump's rating plate when making an order.

The spare parts catalogue is available at: www.wilo.com.

Subject to technical modifications.

Deutsch

Auf Basis der neuen Verordnung (EU) Nr. 305/2011 des Europäischen Parlaments und des Rates vom 9. März 2011 zur Festlegung harmonisierter Bedingungen für die Vermarktung von Bauprodukten und zur Aufhebung der Richtlinie 89/106/EWG - kurz Bauproduktenverordnung (BPV) - wird der Umfang der CE-relevanten Dokumentation erhöht.

Mit Erhalt dieser CE-Dokumentation:

- erhalten Sie die CE-Kennzeichnung für das Produkt nach der BPV.
- erhalten Sie den Downloadlink für die Leistungserklärung nach der BPV:
