

BI-2016: Internal Bending spring 20x2 I=50

Commercial information

We recommend using a bending spring to make bends in a multilayer pipe. This will prevent kinks in the pipe when bending. That is why the bending spring is placed in the pipe before bending. It is a steel spiral spring; the thin spiral form allows you to easily make any bends. For a 90° bend, an elbow fitting is recommended

| Basic unit dimensions | | |
|---------------------------------------|--|--|
| Height | 15 mm | |
| Length | 500 mm | |
| Width | 15 mm | |
| Net weight | 0.286 kg | |
| Certificates | | |
| Applications | | |
| Potable water, Heating, Cooling, C | compressed air, Underfloor Heating, Gas, Sanitary | |
| Solutions | | |
| Building installations, Industry, Und | derfloor heating, Oil & gas, Utility, Shipbuilding | |

Technical characteristics

| Suitable for aluminium tube | ✓ | Tube diameter | |
|-----------------------------------|---|---------------|--|
| Suitable for plastic tube | ✓ | | |
| Suitable for copper tube | × | | |
| Suitable for steel tube | × | | |
| Suitable for stainless steel tube | × | | |
| Suitable for other tube materials | × | | |
| With inner cable | × | | |
