

BI-2620: Internal Bending spring 26x3 l=100

Commercial information

We recommend using a bending spring to make bends in a multilayer pipe. This will prevent kinks in the pipe when bending. That is why the bending spring is placed in the pipe before bending. It is a steel spiral spring; the thin spiral form allows you to easily make any bends. For a 90° bend, an elbow fitting is recommended

Basic unit dimensions

Height	18 mm
Length	1,000 mm
Width	18 mm
Net weight	0.400 kg

Certificates

Applications

Potable water, Heating, Cooling, Compressed air, Gas, Sanitary

Solutions

Building installations, Industry, Oil & gas, Utility, Shipbuilding

Technical characteristics

Suitable for aluminium tube	✓	Tube diameter	26 26 Millimetre
Suitable for plastic tube	✓		
Suitable for copper tube	✗		
Suitable for steel tube	✗		
Suitable for stainless steel tube	✗		
Suitable for other tube materials	✗		
With inner cable	✗
