# Before first use

Before getting started with this product, it is advisable to check the order completeness and any damage. If this is the case, please contact Tronix Lighting.

# Description

These sturdy decorative snowflakes from Tronix are not only very beautiful, but also very handy. Each ball comes with a two-piece plug, allowing you to easily make a connection towards the power supply.
This allows you to easily create very atmospheric combinations.

**Features**

* To be combined with pro-system modular 230V;
* Steel construction;
* Foldable design for easy storage and transportation;
* Various light colors, light types and sizes for perfect ambience experience.

60 cm
# Installation

1. Turn off the power and remove the product and associated parts from the packaging.
2. Pull the wiring using the purchased PS230 cables;
3. Then place one or more motifs on this set and attach them securely using the metal loop on the motif;
4. Check the complete installation. Should this be in order, you can reactivate the power.

## Safety

Safety is a top priority at Tronix Lighting. Therefore, we heartily recommend that you follow the following steps closely:

- Keep this manual carefully for future reference;
- Choose a qualified electrician while installing, maintaining or inspecting this product;
- Never look directly into a light source to avoid possible eye damage;
- Ensure that the respective power group is always on non-active when the product is connected;
- Use only recommended combinations (LED drivers, controllers or dimmers) to avoid injury or damage to the product;
- The light sources of this motif is not replaceable. Because of this, you need to replace the entire fixture towards the end of its life and it is not recommended to open it.

## Technical problems and repair

Should a product not work properly after installation, or if the product exhibits problems over time, it is advisable to check the following elements:

- Check the wiring and installation of your product;
- Check for the presence of interfering elements such as dust, water or other electronics;
- If possible, try disconnecting the product and testing it in another location to rule out a problem at the location;
- Should you be dealing with a WIFI-based product, check and reset your router's settings.

Should the product still not work after testing, it is recommended to send it in for inspection and/or repair. To do so, please contact Tronix Lighting using nearby details and proof of purchase (packing slip).
