# **Product Environmental Profile**

Powerpact™ L-frame molded case circuit breaker with micrologic™ trip unit

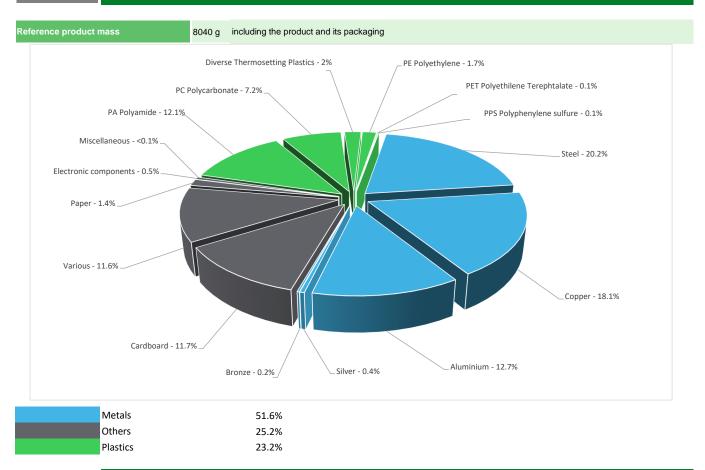

#### General information

| Reference product          | Powerpact™ L-frame molded case circuit breaker with micrologic™ trip unit - LLL36600U31X   |
|----------------------------|--|
| Description of the product | The main purpose of the PowerPact™ L-Frame Molded Case Circuit Breaker with Micrologic™ Trip Unit is to protect electrical systems from damages caused by overloads and short circuits.  |
| Description of the range   | Single product   |
| Functional unit            | Protect the installation from overloads and short circuits in a circuit with rated voltage Ue, rated current In, with Np poles, a rated breaking capacity Icu, and, if applicable, the specific specifications, in the Industrial application area, according to the appropriate use scenario, and during the reference service life of the product of 20 years.   |
| Specifications are:        | Protect during 20 years the installation against overloads and short-circuits in circuit with assigned voltage 600 V and rated current 600 A. This protection is ensured in accordance with the following parameters:  Ue = Rated operating voltage (V) - 600V In = Rated current (A) - 600A Np = Number of poles / number of protected poles - 3 NOS Icu: Rated breaking capacity (A) - 50 kA Current type - AC |

## Constituent materials

Substance assessment

Details of ROHS and REACH substances information are available on the Schneider-Electric website <a href="https://www.se.com">https://www.se.com</a>

### Additional environmental information

Recyclability potential:

59%

The recyclability rate was calculated from the recycling rates of each material making up the product based on REEECY'LAB tool developed by Ecosystem, for components/materials not covered by the tool, data from the EIME database and the related PSR was taken. If no data was found a conservative assumption was used (0% recyclability).

### **Environmental impacts**

| Reference service life time      | 20 years  |   |   |  |  |  |  |  |  |  |  |
|----------------------------------|---|---|---|--|--|--|--|--|--|--|--|
| Product category                 | Circuit-breakers - Industrial   |   |   |  |  |  |  |  |  |  |  |
| Life cycle of the product        | The manufacturing, the distribution, the installation, the use and the end of life were taken into consideration in this study  |   |   |  |  |  |  |  |  |  |  |
| Electricity consumption          |   | The electricity consumed during manufacturing processes is considered for each part of the product individually, the final assembly generates a negligable consumption and is not considered in the analysis. |   |  |  |  |  |  |  |  |  |
| Installation elements            | The product does not require any installation ope   | rations & end of life instructions  | s of packaging is considered in                       | nstallation phase.                             |  |  |  |  |  |  |  |
| Use scenario                     | Use time rate: 30% of RLT  The energy consumption of the product is 113.4 W on full time load by confirmed from designer. According to PSR0005, load rate: 50 % of In; Use time rate: 30% of the RLT as 28.35 W  The end user must refer to maintenance guide of the product in order to do the appropriate maintenance operations. The MODULE T - U31 UL 3P 600A (3P3T MICROLOGIC 3.3 600A TRIP UNIT) and VISI-TRIP HANDLE C2 MODULE to be replaced every 10 years and the battery (Lithium Coin) every 5 years. |   |   |  |  |  |  |  |  |  |  |
| Time representativeness          | The collected data are representative of the year   | The collected data are representative of the year 2025  |   |  |  |  |  |  |  |  |  |
| Technological representativeness | The modules of technologies such as material production, manufacturing processes and transport technology used in the PEP analysis (LCA EIME in the case) are similar and representative of the actual type of technologies used to make the product.   |   |   |  |  |  |  |  |  |  |  |
| Geographical                     | Final assembly site Use phase End-of-life   |   |   |  |  |  |  |  |  |  |  |

<sup>\*</sup> represents less than 0.01% of the total life cycle of the reference flow

Life cycle assessment performed with EIME version v6.2.5-6, database version 2024-01 in compliance with ISO14044, EF3.1 method is applied, for biogenic carbon storage, assessment methodology -1/1 is used

Please note that the values given above are only valid within the context specified and cannot be used directly to draw up the environmental assessment of an installation.
