Repeater for use in RF installations with insufficient range

410-00535

4 year warranty

The repeater is used in installations with insufficient range and has two operating modes: cascade and defined mode.

When using up to three repeaters in cascade mode, the range can be extended by up to 3 times.

In defined mode, a maximum of 32 control points can be learned.

An indication LED flashes when a command is received or sent.

The repeater does not work for motor control and dimmers (because you have to press and hold the button for a long time).
