Eaton is a leading power management company, providing energy efficient solutions that help customers use electrical, fluid and mechanical power more reliably, efficiently, safely and sustainably.

This document contains reference projects where Eaton’s fire and emergency lighting products have been installed.

Keeping employees safe during an emergency has become more challenging for organisations today than ever before. Eaton is a market leader in Emergency Lighting and Fire notification and has a long history of expertise in the life safety industry. Its products can help detect, notify, evacuate and protect against a range of traditional threats, such as fire, power outages, extreme weather and crime, as well as non-traditional threats like terrorism and public disorder.

Fire notification

Emergency lighting

Voice alarms and communications

Education

Build a cohesive system that is connected and integrated, meets and exceeds safety standards, improving student and teacher productivity and security.

University of Leipzig (Leipzig, Germany)

The University of Leipzig was founded in 1409 and looks back on a long tradition. Today, the University has a brand-new campus benefiting from state-of-the-art equipment. More than 28,000 students from Germany and across the world have found a second home at the University. Eaton's centrally powered emergency lighting is installed at the site.

University of Zurich (Zurich, Switzerland)

Eaton's emergency lighting products have been in use at Switzerland's largest University for nearly three decades. A wide range of central battery systems are installed across the University's 150 buildings. The campus also benefits from the CG Vision software monitoring system to maintain the large scale installation.

University of Manchester (Manchester, United Kingdom)

A highly respected center of teaching excellence with outstanding facilities. Eaton has been a fire systems partner for over 15 years. A network of CF3000 panels can be found throughout the campus.

Dortmund Technical University (Dortmund, Germany)

A prestigious University with 30,000+ students and 6,000+ staff. Eaton's centrally powered safety and escape sign luminaires help protect building occupants in emergency situations.

Spring Mews - major multi-use building development

Location

London, United Kingdom

Overview

Fire safety system for a major London building development, which includes a luxury hotel, student accommodation, retail stores and leisure facilities.

Products used

- 14 x CF3000 addressable fire panels
- 1,200 detectors
- 1,000 fire alarm sounders
- 80 manual call points
- Emergency Voice Communication System (EVCS)

Background

Completed in September 2014 and developed by CLS Holdings plc, the Spring Mews development provides luxurious lodging to more than 400 students, granting them excellent social, leisure and academic facilities on site, such as a cinema, gym, swimming pool, laundry facilities and study/games areas. The development also includes a contemporary 93-bed suite hotel and various retail spaces. CLS Holdings tasked ABCA Systems, a specialist electrical systems installer, with providing a top quality fire alarm and disability refuge system throughout Spring Mews.

"Health and safety is our main priority, and with an Eaton fire system in place we can rest assured that our students, guests and visitors are well taken care off."

Philip Miller, ABCA Systems

Challenge

To provide for the safety of students, guests and visitors, as well as the premises itself in the new development. The Spring Mews project required a bespoke fire alarm solution with a sophisticated range of cause-and-effect programming to meet the differing detection and alarm requirements for each of its facilities, including permanent or temporary accommodation, retail units and business premises.

Solution

ABCA Systems chose to install 14 CF3000 high specification intelligent addressable fire alarm control panels throughout the new facilities as an ideal solution to the demands stemming from the diversity of the multiple use premises.

In addition to the panels, an array of fire ancillaries were also installed, including a 'bell tone' electronic sounder that was developed specifically for the Spring Mews project.

Results

Following the completion of the Spring Mews site, Eaton has ensured maximum protection for all students and visitors, through the use of the CF3000 addressable control panel which allows for the pinpointing of any tripped fire alarms. The implementation of a bespoke fire alarm solution has provided Spring Mews with a system to guarantee business continuity and safety.

Retail

Create an aesthetically inviting space that enhances the visitor experience, while remaining flexible for changing layout needs.

Apple Stores (United Kingdom)

A range of Eaton fire systems can be seen in the biggest names in retail throughout the UK. Many Apple stores in the country's largest shopping complexes are fitted with Eaton fire systems.

Dubai Mall (Dubai, United Arab Emirates)

One of the largest shopping malls in the world with almost 100 million visitors per year. 6,000 of Eaton's GuideLED emergency luminaires light the exit ways; our service and commissioning teams keep things compliant and efficient.

Disney Stores (United Kingdom)

Protecting people and property, a range of Eaton fire products can be found in Disney stores throughout the UK.

Karstadt Leipzig (Leipzig, Germany)

A historic department store that underwent major renovations and a new building extension in 2006. The five storeys of the building are equipped with our safety and exit sign luminaires, helping to ensure the safe evacuation of customers in a hazard or emergency.

Commercial office, government and mixed-use buildings

Keep your people and reputation well protected with a design that emphasises functionality, well being and productivity, achieves more efficient operations and reduces your overall energy consumption.

Hungarian Parliament (Budapest, Hungary)

One of Europe's oldest buildings and a notable landmark, Hungary's parliamentary home is equipped with a centrally powered emergency lighting system and LED luminaires.

Caglayan Court of Justice (Istanbul, Turkey)

A network of 20 addressable fire panels, installed in 2011, provide a comprehensive safety solution to Europe's largest courthouse. At over 300,000m², the site utilises Graphpack software that provides on-site alarm management and a clear graphical user interface to pinpoint any alarm.

Burj Khalifa Tower (Dubai, United Arab Emirates)

Amassing a number of world records, such as 'tallest building in the world' and 'tallest service elevator', the megatall Burj Khalifa tower is an awe-inspiring feat of science. The frameless SpiritLED luminaire and 72 compact central battery panels met the aesthetic requirements and technical challenges of this impressive project.

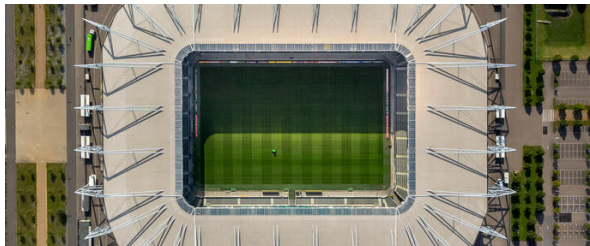

Stadia

Design and build the best-in-class facility that showcases your brand and keeps people safe in an unfamiliar environment.

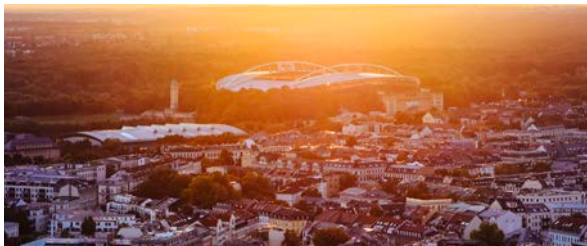

Mugello Circuit (Tuscany, Italy)

The 15 turns that make up the Mugello Moto GP circuit are famous for wowing thousands of spectators every year. The new viewing gallery is situated at the heart of the action and required clear escape route lighting. Installed at up to 14m high, a range of Eaton luminaires were used to meet the challenging requirements; a service contract provides future reassurance.

Borussia-Park Stadium (Mönchengladbach, Germany)

Opened in 2004, the home stadium of Borussia Mönchengladbach has a capacity of 54,014 spectators. In hazard situations our emergency lighting systems indicate direct routes to the outside and reliably provide safety.

Red Bull Arena (Leipzig, Germany)

The Red Bull Arena stadium was inaugurated as long ago as 1956. Over the years, the stadium has been modified several times and currently has a total capacity of 42,959 seats.

Since the last refurbishment in 2015 which included extensions to the VIP and press areas, our GuideLed safety and escape sign luminaires provide safety and highlight evacuation routes throughout the stadium.

Emirates Stadium - supporting life safety at Arsenal Football Club

Location

London, United Kingdom

Overview

Support the safe evacuation of visitors (max. capacity: 60,432) to one of the world's top stadia developments.

Products used

- 42 x static inverters (LP Star)
- EasiCheck testing and monitoring system

Background

Home to Arsenal Football Club, the Emirates Stadium is renowned as a first-class sporting venue. When the stadium was being designed and built, crowd safety was the paramount concern.

Challenge

A reliable, high quality, emergency lighting system was needed to ensure large crowds could leave safely in the event of an emergency.

After review, a central battery system was the most practical and economical solution for powering the emergency lighting. As well as providing inherent long-term cost benefits in such a large venue, a central battery system offers high light output and reduced maintenance requirements, both of which are significant advantages due to the high mounting heights of some of the emergency luminaires.

Solution

After a competitive tender, market leader Eaton was chosen to supply a system comprising of 42 individual static inverters.

Installed at various locations throughout the stadium, the static inverters are connected to hundreds of Eaton's emergency luminaires and to any mains luminaires designated for emergency use.

Each static inverter includes a bespoke Easichk testing system, which minimises maintenance by automatically carrying out the requisite testing of the unit's batteries to comply with legal requirements.

In addition to the emergency lighting system, Eaton also supplied a wide variety of luminaires from its range of mains lighting products.

Results

The use of a reliable static inverter based emergency lighting system has helped to ensure the safety of all football supporters visiting the Emirates Stadium. By employing sophisticated charging techniques, battery life in the static inverters is expected to be at least 10 years. When replacement does eventually become necessary, this will be a quick and simple process carried out away from public areas.

Hospitality and leisure facilities

Ensure a great visitor experience through an aesthetically pleasing environment, while maintaining a round-the-clock, cost effective operation that reduces energy costs and meets regulatory requirements.

Go Air (Cardiff, United Kingdom)

The developers behind the largest trampoline park in Wales, UK chose Eaton for Fire, Emergency and Mains lighting systems. The 120 trampolines, 6 foam pits and dodgeball arena are protected by a BiWire Ultra fire system alongside high performing Alfalux Highbay LED emergency luminaires.

Burj Al Arab (Dubai, United Arab Emirates)

Considered to be the world's most luxurious hotel, its stunning sail shape is internationally recognisable. Guests and staff across its 56 floors and 202 rooms can be reassured by a combination of 4,500+ luminaires and 130 emergency lighting panels.

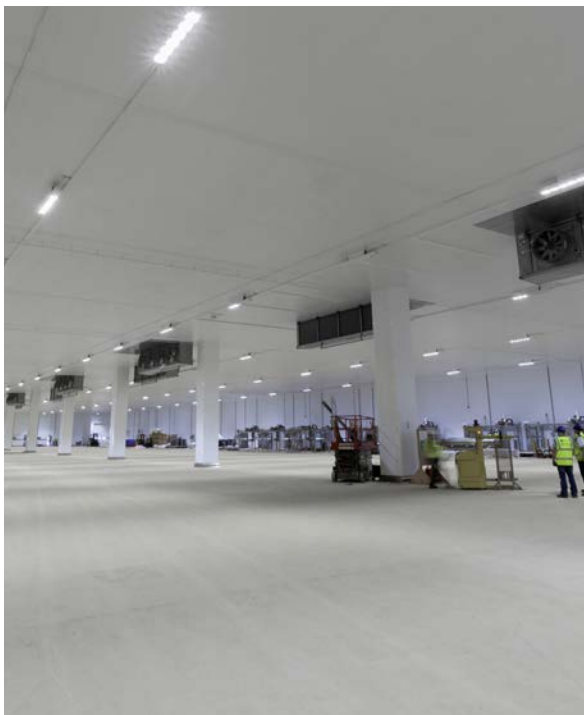

New Modern Art Museum (Bolzano, Italy)

The carefully designed Brilliant Edge emergency luminaires suit the interior of this modern art museum on Italy's Austrian border perfectly. Commissioned by Eaton, the centrally powered emergency lighting system allows visitors to the site to focus on the exhibits in safety.

Industrial and warehouses

Maximise the functional use of the space to increase productivity and manage operational risk, while achieving greater energy efficiency.

Arla Foods (Aylesbury, United Kingdom)

The world's largest fresh milk dairy processing plant included a number of challenging installation considerations, such as cold conditions and high ceilings. A range of centrally powered emergency lighting solutions were chosen for this large project, including the robust Litex high-bay luminaire, i-P65 LED and Micropoint 2 escape lighting.

Ferrari F1 Racing Team (Maranello, Italy)

Ferrari is the oldest and most famous contender in Formula 1 racing. When refurbishing their headquarters, Eaton's centrally powered emergency lighting system was selected to protect people and property due to its reliability and flexibility.

Airports, rail and infrastructure facilities

Reduce downtime, increase availability and enhance safety and security to drive profitability, while meeting customer expectations and government regulations.

Bangkok Airport (Bangkok, Thailand)

Bangkok airport is one of Asia's busiest airports, handling in excess of 50 million passengers every year. 60+CG2000 group battery systems and nearly 2,000 luminaires help meet the complex safety challenges of the site.

Schiphol Airport (Amsterdam, Netherlands)

Schiphol is the third busiest airport in Europe, serving over 63 million passengers a year. The airport includes 3 departure halls, 8 concourses and 142 gates leading to 6 runways. Approximately 30 Eaton Euro ZB and ZB-S central battery systems and 3,000 bespoke luminaires for emergency lighting are in use throughout the airport.

Eurotunnel (Folkestone, UK / Calais, France)

Since its first opening in 1994, more than 366 billion passengers have travelled through the channel tunnel. Eaton was the original provider of emergency lighting to Eurotunnel and still supports the 50km railway operation today. In 2013 Eaton supplied thousands of new Emergency Lighting LED luminaires specifically developed to ease maintenance demands.

Frankfurt airport - Protecting one of Europe's largest airports

Location

Frankfurt/ Main, Germany

Products used

- CG testing and monitoring system
- 64,000 emergency luminaires across the site
- Integrated to in-house management software

Overview

Provide a reliable, easy to maintain Emergency Lighting system that works alongside existing safety systems and procedures.

Background

Frankfurt Airport is the third largest airport in Europe, with a passenger volume of over 59 million (2014). In terms of cargo, it carries an annual freight volume of roughly two million tonnes (2014), which is the highest in Europe. Fraport AG, the airport operator, has been using Eaton's CEAG solutions for many years to provide effective emergency lighting.

Challenge

To implement and manage an automatic, cost-effective emergency lighting system.

There are very few buildings where safety is a bigger priority than at an airport. In the event of a power outage or outbreak of panic, the lighting system will show occupants the way to exit the building safely. In the case of such an extensive facility as Frankfurt Airport, particular importance is attached to having the simplest, most convenient installation and continuous operation and monitoring of the system.

Solution

CG technology from Eaton is used as the basis for conveniently monitoring the emergency lighting system at Frankfurt Airport. It provides an automated test system for every single luminaire. Status changes are saved in a test log, with the information being forwarded to a master monitoring system.

Visualisation software provides a detailed view of the entire system at Frankfurt Airport. For instance, a fault with a luminaire is displayed centrally on a screen in the control room locating it and the fault is quickly identified by displaying the luminaires and systems in floor plans.

The power consumption of Eaton escape signs is roughly 70 per cent less than that of luminaires with fluorescent lamps. In addition, the LEDs' long service life of 50,000 hours reduces the amount of maintenance required.

Results

At Frankfurt Airport six decentralised monitoring software units are used for the individual areas of the airport. These units constantly monitor all of the system's 64,000 light points. They communicate with a master PC in the control of the airport's risk management room department and trigger the alert for the 24-hour on-call service in the event of priority errors.

The request to link the monitoring software to the in-house SAP system posed a particular challenge. This was achieved using a special interface which converts the fault report automatically into a maintenance order.
