Specific Part

1 Technical description of the product

The fischer Bolt Anchor FAZ II Plus dynamic is an anchor made of galvanised steel (FAZ II Plus dynamic) or stainless steel (FAZ II Plus dynamic R) which is placed into a drilled hole and anchored by torque-controlled expansion.

The fastener consists of an fischer Bolt Anchor FAZ II Plus with cone bolt, expansion clip, washer and hexagon nut and a Dynamic set with filling conical washer, spherical washer and lock nut.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the fastener is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the fastener of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic (static, quasi-static loading and seismic)	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annexes C 1, C 5, C 6
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C 2
Displacements (static and quasi-static loading)	See Annex C 9
Characteristic resistance and displacements for seismic performance categories C1 and C2	See Annexes C 7 to C 9

Essential characteristic (fatigue loading, Linearized function - Assessment method C)	Performance		
Characteristic fatigue resistance under cyclic tension loading			
Characteristic steel fatigue resistance $\Delta N_{Rk,s,0,n}$ ($n = 1$ to $n = \infty$)			
Characteristic concrete cone, pull-out, splitting and blow out fatigue resistance $\Delta N_{Rk,c,0,n}$ $\Delta N_{Rk,sp,0,n}$ $\Delta N_{Rk,cb,0,n}$ $(n$ = 1 to n = ∞)	See Annexes C 10 and C 11		
Characteristic pull- out fatigue resistance $\Delta N_{Rk,p,0,n}$ $(n$ = 1 to n = ∞)			

European Technical Assessment ETA-20/0897

Page 4 of 22 | 22 May 2023

English translation prepared by DIBt

Essential characteristic (fatigue loading, Linearized function - Assessment method C)	Performance		
Characteristic fatigue resistance under cyclic shear loading			
Characteristic steel fatigue resistance $\Delta V_{Rk,s,0,n}$ (n = 1 to n = ∞)			
Characteristic concrete edge fatigue resistance $V_{Rk,c,0,n}$ ($n = 1$ to $n = \infty$)	See Annexes		
Characteristic concrete pry out fatigue resistance $\Delta V_{Rk,cp,0,n}$ (n = 1 to n = ∞)	C 10 and C 11		
Characteristic fatigue resistance under cyclic combined tension and shear	loading		
Characteristic steel fatigue resistance a_s (n = 1 to n = ∞)	See Annexes C 10 and C 11		
Load transfer factor for cyclic tension and shear loading			
Load transfer factor ψ_{FN}, ψ_{FV}	See Annexes C 10 and C 11		

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C 3 and C 4

3.3 Aspects of durability

Essential characteristic	Performance
Durability	See Annex B 1

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with European Assessment Document No. 330250-00-0601, the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

Issued in Berlin on 22 May 2023 by Deutsches Institut für Bautechnik

Dipl.-Ing. Beatrix Wittstock Head of Section beglaubigt: Stiller

Cone bolt manufactured by cold - forming: 2 Cone bolt manufactured by turning: 5 Radial: Axial: 1 Expansion sleeve 2 Cone bolt (cold – formed or turned) 3 Filling adapter 4 Filling conical washer (various versions) (5) Spherical washer 6 Washer Angular: 7 Hexagon nut 8 Lock nut

fischer Bolt Anchor FAZ II Plus dynamic	
Product description Materials	Annex A 3

Specifications of intended use								
Fastenings subject to:								
Size	FAZ II Plus dynamic, FAZ II Plus dynamic R							
OIZC	M16	M20	M24					
Hammer drilling with standard drill bit								
Hammer drilling with hollow drill bit with automatic cleaning		✓						
Static and quasi-static loading in cracked and uncracked concrete		✓						
Seismic actions category C1 and C2 – not in combination with fatigue loading		✓						
Fire exposure – not in combination with fatigue loading		✓						
Fatigue load in cracked and uncracked concrete – not in combination with seismic- or fire exosure		✓						

Base materials:

- Compacted reinforced and unreinforced normal weight concrete without fibres (cracked and uncracked) according to EN 206:2013+A2:2021
- Strength classes C20/25 to C50/60 according to EN 206:2013+A2:2021

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (FAZ II Plus dynamic, FAZ II Plus dynamic R)
- For all other conditions according to EN 1993-1-4:2006 + A1:2015 corresponding to corrosion resistance class CRC III: for FAZ II Plus dynamic R

Design:

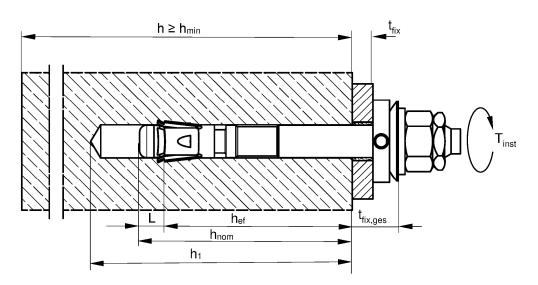

- Fastenings are to be designed under the responsibility of an engineer experienced in fastenings and concrete work
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The
 position of the fastener is indicated on the design drawings (e.g. position of the fastener relative to reinforcement
 or to supports, etc.)
- Design of fastenings according to EN 1992-4:2018 and EOTA Technical Report TR 061: 2020-08 "Design method for fasteners in concrete under fatigue cyclic loading"
- Fastenings in stand-off installation according to EN 1992-4:2018, 6.2.2.3 are not covered by this European Technical Assessment
- Fatigue design cannot be done in combination with seismic- or fire exposure

 $^{^{1)}}$ For the application without drill hole cleaning: $h_{1,nc} = h_1 + 15 \text{ mm}$

 h_{ef} = Effective embedment depth

 t_{fix} = Thickness of the fixture

 $t_{fix,ges}$ = Thickness of the fixture and the filling set

 h_1 = Depth of drill hole to deepest point

 $h_{1,nc}$ = Depth of drill hole to deepest point witout cleaning

h = Thickness of the concrete member
h_{min} = Minimum thickness of concrete member

 h_{nom} = Overall fastener embedment depth in the concrete

 T_{inst} = Required setting torque

L = Length from hef to end of cone bolt

(Fig. not to scale)

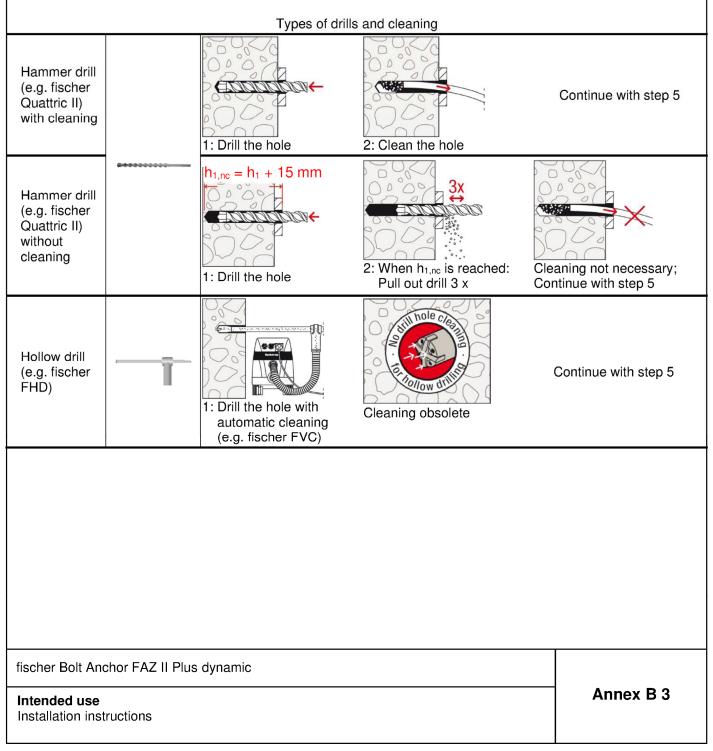

fischer Bolt Anchor FAZ II Plus dynamic	
Intended use Installation parameters	Annex B 2

Installation instructions:

- Fastener installation carried out by appropriately qualified personnel according to the design drawings and under the supervision of the person responsible for technical matters on the site
- · Use of the fastener only as supplied by the manufacturer without exchanging the components of the fastener
- Hammer- or hollow drilling according to Annex B 2
- Drill hole created perpendicular +/- 5° to concrete surface, positioning without damaging the reinforcement
- In case of aborted hole: new drilling at a minimum distance twice the depth of the aborted drill hole or smaller distance if the aborted drill hole is filled with high strength mortar and if under shear or oblique tension load it is not in the direction of load application

Installation instructions: Drilling and cleaning the hole

Installation instructions: Installation of the fastener								
	5: Check the position of the conical washer							
	6: Set the fastener. E.g. with fischer FA-ST II setting tool:							
Tinst	7: Apply T _{inst}							
	8: Tighten lock nut manually, then use wrench to give another quarter turn							
	9: The gap between anchor and fixture (annular gap) must be filled with mortar (compressive strength ≥ 50 N/mm² e.g. fischer FIS HB, FIS V Plus, FIS EM Plus or FIS SB) via the fillable conical washer.							
t _{fix} ,ges	10: Correctly installed fastener

Determination of A_{sp,ef} for each existing free edge

Splitting failure applied for minimum edge distance and spacing in depending on her

Definition Index:

cal = calculatory

Example for different anchor plates: For considering all free edges the direction 1 and 2 must be swaped.

General formulation for each free edge: $A_{sp,ef} = (c_2 + s_{cal} + c_3) \cdot h_{cal} \ge (n/2) \cdot A_{sp,reg}$

with:

Edge distance c₁: c_{min} ≤ c₁

Edge distance c_2 : $c_{min} \le c_2 \le 1.5 \cdot c_1$

Edge distance c_3 : $c_{min} \le c_3 \le 1,5 \cdot c_1$

Calculation spacing, distance between outer anchors s_{cal} : $s_{min} \le s_{cal} \le 3,0 \cdot c_1$

Distance between group of anchors a: For $a \ge 3.0$ c₁ no influence between the anchor groups is taken into account.

Number of anchors n of an anchor plate as well close and parallel to the edge

Effective member thickness h_{cal} : $h_{min} \le h$; $h_{cal} \le h$; $h_{cal} \le (h_{ef} + 1.5 \cdot c_1)$

c₁, c₂, c₃, h and s_{cal} have to be set in way that the requirement is fullfiled

For the calculation of minimum spacing and minimum edge distance of fasteners in combination with different embedment depths and thicknesses of concrete members the following equation shall be fulfilled:

$$A_{sp,req} < A_{sp,ef}$$

A_{sp,req} = required splitting area (according to Annex C 5)

 $A_{sp,ef}$ = effective splitting area

(Fig. not to scale)
