

Montage- u. Bedienungsanleitung für Raumtemperaturregler

(D)

Dieses Gerät darf nur durch einen Fachmann gemäß dem Schaltbild im Gehäusedeckel installiert werden. Dabei sind die bestehenden Sicherheitsvorschriften zu beachten.

wird durch entsprechenden Einbau (nach VDE 0100) und der Montage auf einen ebenen, nichtleitenden und nichtbrennbaren Untergrund erfüllt.

Dieser unabhangig montierbare elektronische oder elektromechanische Raumtemperaturregler dient zur Regelung der Temperatur ausschließlich in trockenen und geschlossenen Räumen mit üblicher Umgebung. Außerdem ist er gemäß VDE 0875 bzw. EN 55014 funktionsstabil und arbeitet nach der Wirkungsweise 1 C.

Die Möglichkeit der Anwendung und Dimensionierung, sowie die technischen Daten ergeben sich aus unseren Prospektangaben.

Beim Drehen des Temperaturreinstellknopfes liegt der Schaltpunkt tiefer als beim selbstständigen Regeln des Temperaturreglers. Die Schalt punktgenauigkeit ist erst nach ca. 1-2 Stunden Betriebsdauer erreicht.

Zul. rel. Raumfeuchte: max 95%, nicht kondensierend

Bemessungsstoßspannung 2,5 KV

Temperatur für die Kugeldruckprüfung 75°C

Spannung und Strom für Zwecke der 230V, 10 A / 16 A

EMV-Störaussendungsprüfungen

U 468 931 002 195-04

Mounting and operating instructions for room thermostats

(GB)

This unit must be mounted by an expert, according to the wiring diagram inside the housing cover. The existing safety regulations must be observed.

Will be met by corresponding installation (acc. to VDE 0100) and by fitting on smooth and non-conductive and non-flammable surface.

This electronic or electromechanical room temperature controllers which can be mounted independently is for controlling normal ambient temperature in dry, enclosed rooms only. It has radio interference suppression in accordance with VDE 0875 or EN 55014 and operates to efficiency 1 C. Information about applications, dimensions as well as technical data can be found in our catalogues.

The switching point is lower when temperature control knob is turned than in automatic operation. The exact switching point is reached only after a climatisation period of approx. 1-2 hours.

Relative humidity max. 95% without condensation

Rated impulse voltage 2,5 KV

Brinell test temperature 75°C

Voltage and current for EMC emitted 230 V, 10 A / 16 A

interference testing

Instrucciones de montaje y uso para termostatos

(E)

Este termostato debe ser instalado únicamente por personal cualificado según el esquema de conexión en el interior de la tapa, observando las normas de seguridad existentes.

Se cumple cuando está correctamente empotrado (según VDE 0100) y montado sobre una base plana no conductora y no inflamable.

Estos reguladores de temperatura ambiente electrónicos o electromecánicos sirve exclusivamente para la regulación de la temperatura en locales cerrados y secos con un ambiente normal. Además se cumple la normativa VDE 0875 de protección de interferencias, ó EN 55014 y trabaja de acuerdo al modo 1 C.

Las aplicaciones y condiciones así como los datos técnicos están descritos en nuestros folletos.

Al girar manualmente el mando de ajuste de temperatura et punto de conexión es más bajo que de regulación por el mismo termostato. La precisión de la comutación solo se alcanzará después de 1 a 2 horas de funcionamiento.

La humedad relativa admisible: máx. 95%, sin condensar

Tensión de corriente asignada 2,5 KV

Temperatura para ensayo de dureza Brinell 75°C

Tensión y corriente para control de 230V, 10 A / 16 A

compatibilidad electromagnética

Istruzioni per l'installazione e l'uso dei termostati ambienti

(I)

L'apparecchio deve essere installato da tecnico qualificato secondo lo schema elettrico riportato all'interno del coperchio della scatola. Devono essere rispettate le norme di sicurezza in vigore.

si ottiene con una adeguata installazione (secondo le norme VDE 0100) ed il montaggio su superficie piana, non conduttrice e non infiammabile.

Questo regolatore di temperatura ambiente elettronici o elettromeccanici deve essere impiegato esclusivamente in locali chiusi e non umidi ed è protetto contro le radio interferenze secondo le norme VDE 0875 o EN 55014 con grado di efficienza 1 C.

Ulteriori informazioni circa le applicazioni, dimensioni e dati tecnici sono riportate nei nostri cataloghi.

Il differenziale è più elevato quando si ruota manualmente la manopola della temperatura rispetto all'operazione in automatico. Il punto di intervento esatto si raggiunge dopo 1-2 ore di impiego.

Umidità relativa 95% max, senza condensa

Tensione nominale impulsiva 2,5 KV

Temperatura per la verifica di durezza alla sfera 75°C

Tensione e corrente per le verifiche 230 V, 10 A / 16 A

di compatibilità elettromagnetica

Notice de montage et d'utilisation des thermostats

(F)

Cet appareil ne peut être installé que par un professionnel selon le schéma à l'intérieur du couvercle et en respectant les règles de l'art.

est garantie par un montage encastré conforme (VDE 0100) et par un montage sur un fond plat, non conducteur et non inflammable.

Ce régulateur de température ambiante électroniques ou électromécaniques, est destiné à réguler la température de locaux secs, fermés dans un environnement normal. Il est anti-parasite selon la norme VDE 0875, EN 55014, et fonctionne selon le mode 1 C.

Le domaine d'utilisation, les dimensions ainsi que les caractéristiques techniques se trouvent dans nos prospectus.

Le point de déclenchement est inférieur lorsqu'on tourne le bouton que lors du fonctionnement automatique. Le point de déclenchement correct n'est atteint qu'à bout d'une à deux heures de fonctionnement.

Humidité relative max. 95% sans condensation

Surtension transitoire dimensionnée 2,5 KV

Température d'essai Brinell 75°C

Tension et courant de contrôle de 230 V, 10 A / 16 A

compatibilité électromagnétique

Information om användelsesmuligheter, dimensioner och tekniska data finns i vårt katalog.

Skiftepunktet er lavere når knappen dreies manuelt enn under normal drift når termostaten skifter automatisk. Det korrekte skiftepunktet oppnås etter 1-2 timers drift.

Relativ fugtighet maks. 95% uten kondens

Nominales töstspänning 2,5 KV

Brinell prøvetemperatur 75°C

Spennin og strøm for EMC-prøving 230 V, 10 A / 16 A

forbindelse med elektromagnetisk kompatibilitet

Information om användelsesmuligheter, dimensioner och tekniska data finns i vårt katalog.

Montering- og betjeningsvejledning
for rumsterostater

(DK)

Rumsterostaterne skal installeres af en autoriseret el-installator i henhold til forbindelsesdiagrammer på indersiden af termostatens låg og under hensyn til det gældende stærkstrømsreglement.

Vir til indbygning og montering på et lige, ikke ledende og bændhammede underlag opfyldt VDE 0100.

Elektronisk eller elektromekanisk rumsterostat bruges til regulering i torre rom med normale driftsforhold. Kravene til radiostrøm er opfyldt i henhold til VDE 0875 og EN 55014-1.

Innstiller temperatur er noe lavere når reguleringssrattet dreies manuelt enn ved automatisk drift. Nøyaktig koplingspunkt oppnås etter 1 - 2 driftstimer. Tekniske opplysninger og bruksinformasjon fremgår av våre kataloger.

Relativ fuktighet maks. 95% RH (uten kondensering)

Nominell støtspenning 2,5 KV

Brinell prøvetemperatur 75°C

Spennin og strøm for EMC-prøving 230 V, 10 A / 16 A

Návod k použití pro termostaty série

(CZ)

Pozor!!

Přístroj smí být instalován pouze odborníkem podle schématu zapojení v krytu přístroje. Při instalaci musí být dodrženy stávající normy a bezpečnostní předpisy.

Lze dosáhnout splněním podmínek (VDE 0100) při instalaci a montáži na rovný, nevodivý a nehořlavý podklad.

Tento elektronický nebo elektromechanický regulátor teploty v místnosti slouží k regulaci teploty v suchých, uzavřených prostoroch s normálním prostředím. Odůvodu odpovídá norma EN 55014 v kategorii 1 C.

Při otáčení regulacním knoflíkem leží bod spináni níže než při vlastní regulaci. Udávaná přesnost regulace je dosažena asi po 1-2 hodinách provozu.

Max. rel. vlhkost 95% - nekondenzující voda

Domezovací rázové napětí 2,5 KV

Teplota pro kontrolu kulkového tisku: 75°C

Napětí a proud pro účely kontroly různých 230V, 10 A / 16 A

vysílání elektromagnetické kompatibility

Informace musí být zamontovane przez osobę doswiadczoną zgodnie ze schematem polacjnym znajdującym się wewnątrz obudowy. Wszystkie obwodzące przepisy bezpieczeństwa muszą być zachowane.

Wymaga dodatkowej instalacji (zgodnie z VDE 0100), umocowanej na gładkiej, nie przewodzącej i nie palnej powierzchni.

Ten elektronické lub elektromechanické regulátor teploty v místnosti slouží k regulaci teploty v suchých, uzavřených prostoroch s normálním prostředím. Odůvodu odpovídá norma EN 55014 v kategorii 1 C.

Informace co do zastosowania, wymogów jak i danych technicznych można znaleźć w naszych katalogach.

Kiedy kołekregulatora obraca się w systemie automatycznym, stopień przełączenia jest niższy. Dokładny stopień przełączenia zostanie osiągnięty wtedy, gdy czas klimatyzacji osiągnie 1 do 2 godzin.

Odpowiedni stopień wilgotności maksimum 95 % bez kondensacji

Pomiary napięcia uderzeniowego 2,5 KV

Temperatura kontroli ciśnienia kulkowego 75°C

Napięcie i prąd dla celów EMV-kontroli 230V, 10 A / 16 A

zgodliwości zaktuacji elektromagnetycznych

Инструкция по монтажу регулятора температуры, ус- танавливаемого в помещениях

(R)

Проведение работ по установке данного прибора должно осуществляться только специалистом в соответствии с электросхемой, приведенной на внутренней стороне крышки корпуса. При этом следует соблюдать имеющиеся правила безопасности.

обеспечивается соответствующим мон-
тажом (согласно VDE 0100) и установ-
кой на ровной, непроводящей и несго-
раемой поверхности.

Данный электронный или землемеханический регулятор температуры в помещении, который можно устанавливать в любом месте, предназначен для регулирования температуры исключительно в сухих и закрытых помещениях в условиях обычной окружающей среды. Кроме того, он защищен от радиопомех согласно VDE 0875, соответственно, EN 55014 и работает по принципу действия 1 C.

Область применения, размеры, а также технические характеристики указаны в наших проспектах.

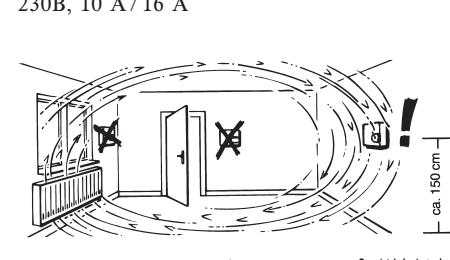

При вращении кнопки настройки/регулировки температуры точка переключения располагается ниже, чем при автоматическом регулировании температуры. Точность точки переключения достигается только через 1-2 часа работы прибора.

Допускаемая влажность в помещениях: макс. 95%, конденсация не допускается.

Расчетное импульсное напряжение: 2,5 кВ

Температура для определения твердости вдавливанием шарика: 75°C

Напряжение и ток для целей испытаний на электромагнитную совместимость: 230V, 10 A / 16 A
