

xEffect - Industrial Switchgear Range

Catalog

Powering Business Worldwide

We make what matters work.*

At Eaton, we believe that power is a fundamental part of just about everything people do. That's why we're dedicated to helping our customers find new ways to manage electrical, hydraulic and mechanical power more efficiently, safely and sustainably. To improve people's lives, the communities where we live and work, and the planet our future generations depend upon. Because this is what really matters. And we're here to make sure it works.

Powering Business Worldwide

We make what matters work.

MCBs and RCCBs for North American market UL certified for eOEMs who acting worldwide providing power distribution systems for Power Plants in North America.

High frequency TL lighting is often used in agricultural industry applications (such as barns). Conventional circuit breakers appear to sometimes fail spontaneously, which is very undesirable in barns. Consider a failure of the ventilation systems, feeding systems, manure and egg collection in poultry barns. By using the new digital circuit breaker from Eaton, the problem of undesired switch off can be minimized.

B+ type RCCB for enhanced fire protection and where DC leakage currents occur – data centers,

High safety relevant applications e.g. hospitals where digital RCCBs are used in the distribution system,

Data center

Hospital

Digital protection switches – the new era has begun.

Better security with proactive communication!

The digital RCCB from Eaton’s xEffect series are capable to do more than just switch off: They monitor electrical installations and issue advance warnings of critical current flows. Thanks to short time delay and optimized tripping threshold, briefly occurring malfunctions do not induce the digital protection switch to shut down.

When a fault current crops up, the information is reported to the security center of the industrial plant right away and troubleshooting can start before a plant failure occurs. Thus the cause of the fault current can be determined precisely and the system can be serviced easily.

That way, system availability increases and service is crucially improved by the convenient remote control.

Numerous advantages at a glance

- The difference between harmless and critical fault currents is detected
- Precise switching and reduction of nuisance tripping
- Continuous monitoring of plant/factory status – prompt warning of a change in status quo
- Convenient troubleshooting by precise location of the malfunction
- As easy to install as a conventional RCCB
- Longer intervals between servicing
- Ideal for system monitoring thanks to preventive information
- Warning of tripping at leakage current
- Clear status display of the fault current problem with tri-colored LEDs
- Real contact position indicator
- Indicator for fault current tripping
- Comprehensive range of accessories available
- Can be integrated in several bus systems

Highly qualified controllers offer their services

PROMOTION

Allow us to introduce ourselves: **FRCdM** and **FRBdM** would like to work in your switchbox. We're two highly qualified control robots from the famous EATON talent factory – the first of the new digital generation.

It's not only that I work completely reliably as a Residual Current Operated Circuit Breaker with integrated Overcurrent Protection (RCBO), but I also display the cause and extent of the flowing fault current. This enables to take fast actions in order to maintain system availability.

And since I'm the RCCB a fault current protection switch, I don't wait until the tripping threshold is reached; I check the present status and register any possible failures, and send this information by remote warning immediately to the central control system. This increases system safety, application availability and minimizes maintenance costs.

Hire us – and experience finally communication at eye level!

The LEDs set off an alarm when fault currents or a shutdown are coming. This makes the troubleshooting faster and much easier. The service mode of the RCBO quickly indicates the extent of the flowing fault current in milliamp increments. By pushing the service button, the blinking LED identifies the area where the fault current is located in. The potential-free contact which is integrated in the RCCB offers a connection to a monitoring system.

- Residual current protection and additional protection with other digital functions
- Auto-reclosure is possible

Red

When the red LED lights up, the leakage current is already higher than 50 percent of the nominal fault current. Therefore the system is in a critical status – the digital RCCB only trips when the fault current continues to increase.

Yellow

The yellow LED shows a residual current in the ambit of 30 to 50 percent of the nominal fault current. Before the system is shut down, professional countermeasures can be taken.

Green

If the current flow in the system to ground is in the ambit from 0 to 30 percent of the nominal fault current, the green LED indicates the proper status.

FRBdM and FRCdM offer several other advantages

The LED enables a fault current display directly on site. In the service mode, malfunction causes can be determined quickly and without complication.

Digital RCBO Type A

Protects against special forms of residual pulsating DC which have not been smoothed.

Digital RCBO Type F

Sensitive to pulsating DC residual current and detection of multifrequency residual currents up to 1 kHz

- Increased protection due to the detection of mixed frequencies
- Higher load rating with DC residual currents up to 10 mA
- Reduction of nuisance tripping thanks to time delayed tripping and increased current withstand capability of 3 kA

The digital display facilitates real-time diagnostics directly at the switch. By means of the LEDs, the system status can be checked anytime, and with one glance.

All models have at least a short time delay to prevent from nuisance tripping due to transient disruptions (lightning, engine start).

Digital RCCB Type A

Protection in case of sinusoidal AC fault currents and pulsating currents with DC components up to 6 mA.

Digital RCCB Type F

These types are capable of sensing pulsating residual currents, residual currents up to 1 kHz and are not negatively affected by a DC overlay of up to 10 mA. They replace the obsolete Type U due to improvements in standardization as well as technical design.

Digital RCCB Type B

In addition to fault currents in the AC and pulse current range, type B also detects smooth DC fault currents which can occur in frequency inverter controls, photovoltaic systems and increases safety considerably.

Digital RCCB Type B+

Complies with the standard VDE 0664-400 (formerly VVDEV 0664-110) for superior fire protection as required by the Association of German Insurance Companies. The type B+ detects high frequency currents up to 20 kHz and the tripping level is limited to max. 420 mA over the defined frequency range.

Digital RCCB Type Bfq

The type Bfq complies with the requirements of the type B. The tripping curve is extended and allows the defection of high frequency currents up to 50 kHz. The adjusted frequency behaviour (insensitive to higher frequencies) prevents nuisance tripping errors in industrial plants with powerful frequency inverter controllers.

Residual Current Devices Type F

Benefits:

- Reliable protection for machines with 1phase frequency converters and 3phase frequency converters if no type B is needed
- Increased protection due to
 - detection of mixed frequencies
 - higher load rating with DC residual currents up to 10 mA
- Reduction of nuisance tripping thanks to
 - time delayed tripping
 - high current withstand capability

Definition

The type F RCD is defined according to IEC/EN 62423. It provides safe and reliable protection against sinusoidal residual currents and pulsating DC fault currents (like type A devices). It is also capable of handling residual currents with mixed frequencies of up to 1 kHz (10, 50, 1000 Hz) in accordance with the IEC 62423 standard.

Type F RCDs can accept smooth DC residual currents of up to 10 mA without affecting their standard functionality, have

a time delayed tripping and distinguish themselves from other devices thanks to their high resistance to power surges: this ensures minimal false tripping and a high degree of safety.

They are available as RCCBs (2-pole or 4-pole up to 100 A) as well as RCBOs (1N up to 40 A). With three versions for different protection levels (30 mA, 100 mA and 300 mA), the type F functionality is voltage independent and can be used for fault and additional protection. As a result,

the recommendations for installations including variable frequency drives have been modified.

Eaton also offers a digital version of the type F RCBO and RCCB. These devices display fault currents in real time.

Field of Application

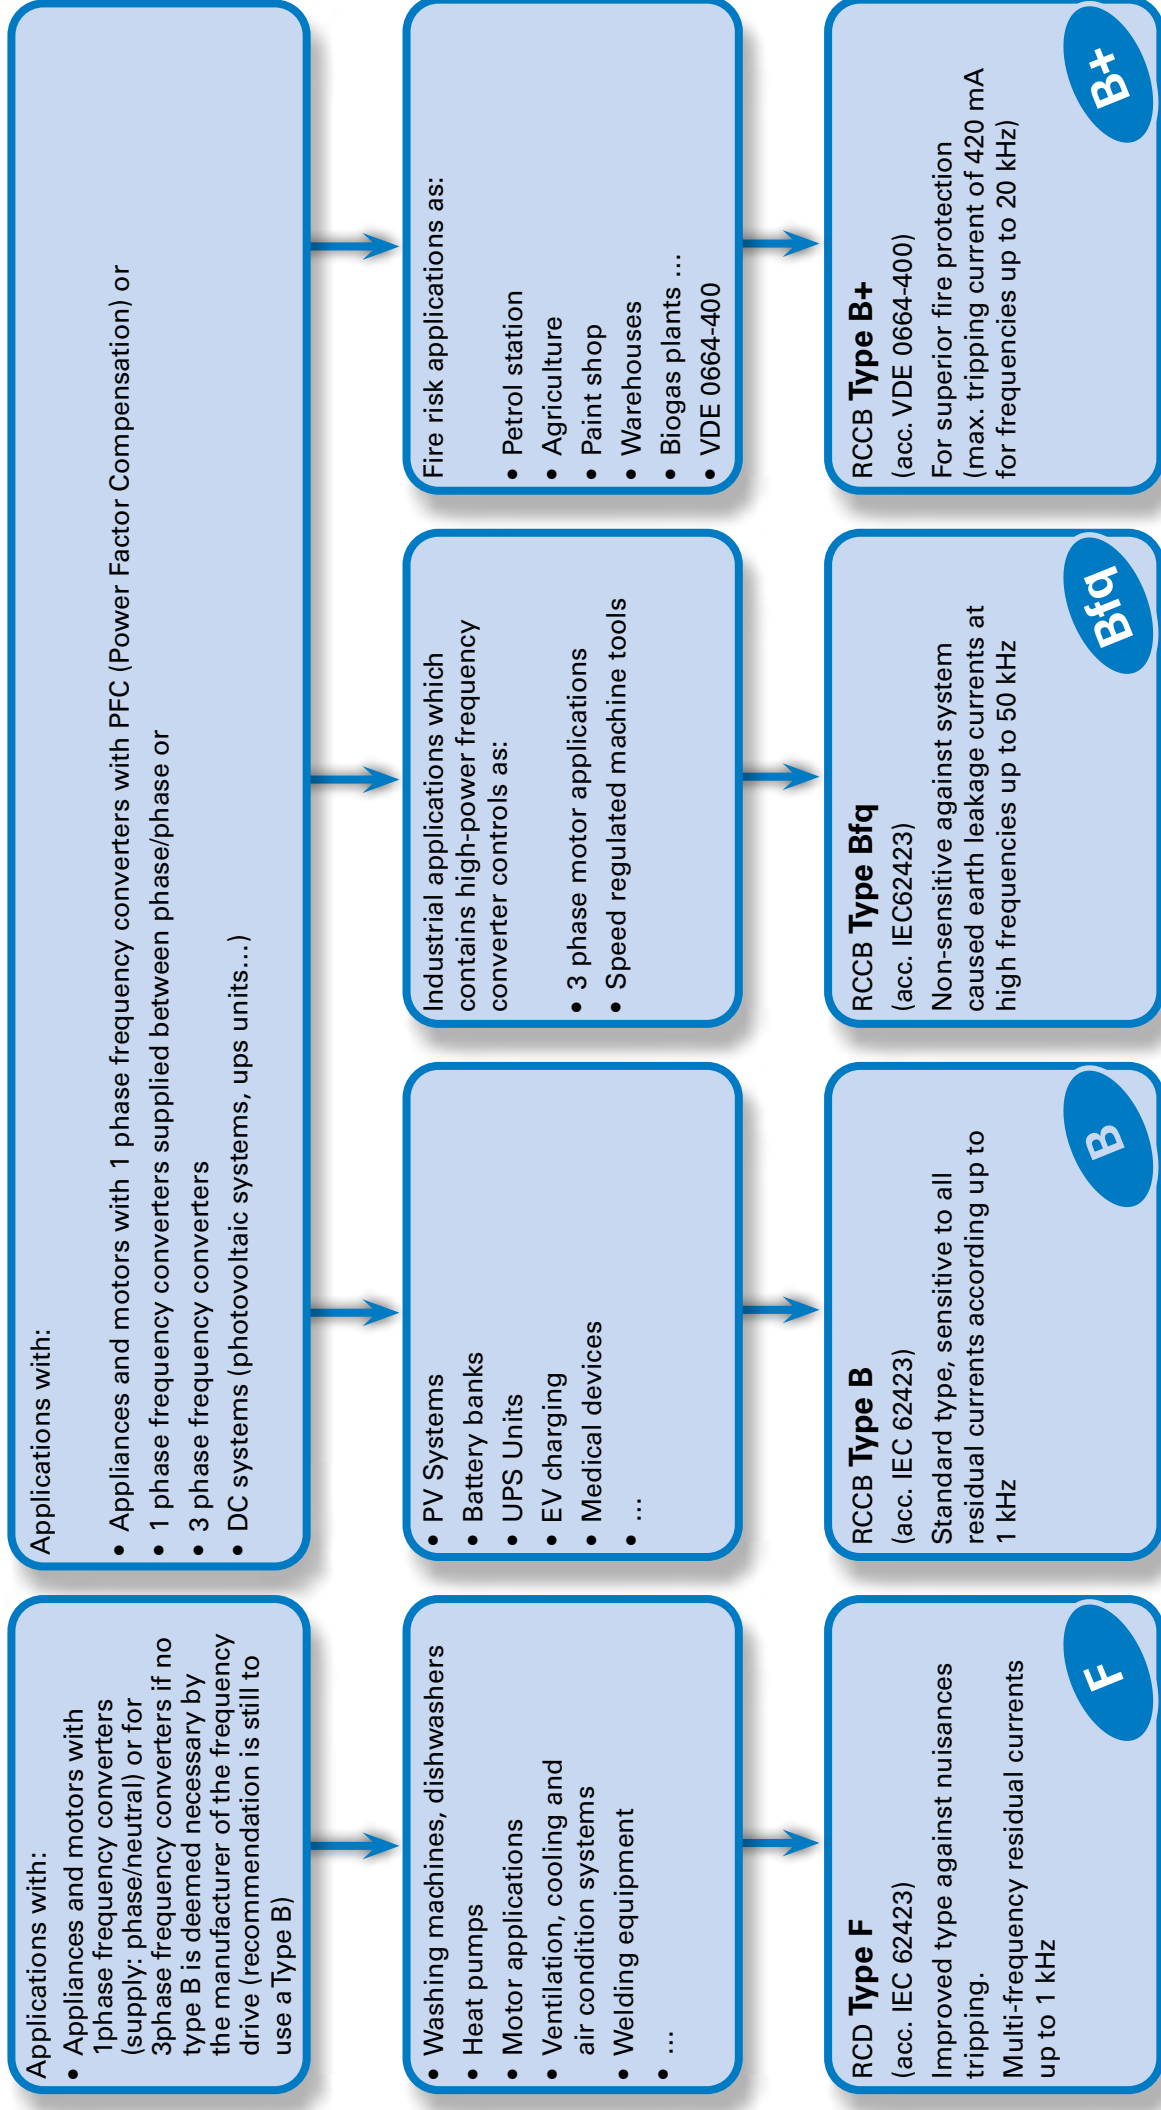

Type F residual current devices are designed specifically for use in applications with single phase frequency converters such as pumps, welding units, vibrators or hammer drills. They are also highly recommended for 3phase frequency converter applications where no Type B is necessary. In this type of application, residual currents with mixed frequencies can arise which residual current devices type AC and A are unable to cope with.

The detection of mixed frequencies and the higher load rating with DC residual currents up to 10 mA enables the RCD type F to provide excellent protection for humans and the system in all applications which contain appliances and motors with single phase frequency converters.

The time delayed tripping and the high current withstands capability support in addition avoiding nuisance tripping. Overall, the RCD type F enables machine builders and plant manufacturers to develop equipment that is extremely reliable while ensuring high safety levels for the operator and maintenance staff.

Selection help RCDs Type F / Type B

Lean connectivity for protective devices (MCBs, RCCBs, RCBOs)

- Permanent information of the system
- Decrease system downtime/Increase system uptime
- Direct connection to the SmartWire-DT line
- Reduction of installation time, wiring and costs

The SmartWire-DT MCB module allows a fast and easy connection of protective devices as MCBs, RCCBs and RCBOs to the SmartWire-DT line.

This gives machinery builders and installers the possibility to integrate protective devices comfortably in the Lean automation.

The status (on, off, tripped) of the protective devices is so implemented in the control or monitor system of the machinery or the power distribution and supports the service and maintenance teams permanently with information about the system and helps to react immediately in case of problems to keep the system downtime as short as possible.

A further big benefit is also the direct connection on the SmartWire-DT line. This makes the additional I/O level and wiring redundant and machinery builders can reduce so installation time and costs.

Example: Savings in every step of the life cycle

Eaton help you build better and safer trains

Compliance

Eaton is offering leading products that guarantee the highest levels of safety and performance according to specific standards such as IEC 61373 (Rolling stock equipment - Shock and vibration tests) or EN 45545-2 (Fire protection on railway vehicles).

Eaton products comply with the usual electrical standards (IEC and UL) for a worldwide usage.

With a unique mix of products, Eaton possesses industry-recognized safety products that are specifically designed for the railway's harsh and hazardous environment.

Competitiveness

Eaton is providing a large range of standard products covering the major electrical components used in rolling stock, and which are designed to reduce the level of maintenance required even when operating in harsh environmental conditions.

You can optimize your total cost of ownership by reducing the maintenance cost with our proven long life-time products.

Our innovation center and engineering teams are designing customized solutions that enhance productivity. Our engineering services help to optimize investment cost.

Expertise and Partnerships

With our rail competency center and a network of application engineers, we ensure that new and refurbished trains offer high levels of reliability and help to reduce total cost of ownership.

Legacy of innovation

With 30 years of experience in rail, our innovative portfolio has grown, including solutions from:

| | |
|--------------|--------------|
| Heinemann | Cooper |
| Bussmann | Walterscheid |
| Moeller | Vickers |
| Martek Power | Aeroquip |

Protect your passengers and equipment

Applications

Protection of electrical equipment such as:

- Motors
- HVAC systems
- Power outlets
- Door control
- Lighting
- Signaling
- Battery box

Your challenges

- Fire safety
- Harsh environmental conditions
- Long life cycle
- Long cables
- Temperature variation

Our solutions

Eaton has an unique offer of power protection devices, including:

- Miniature Circuit Breakers (MCB)
- Residual Current Devices (RCD)
- Electronic protection modules (PXS)

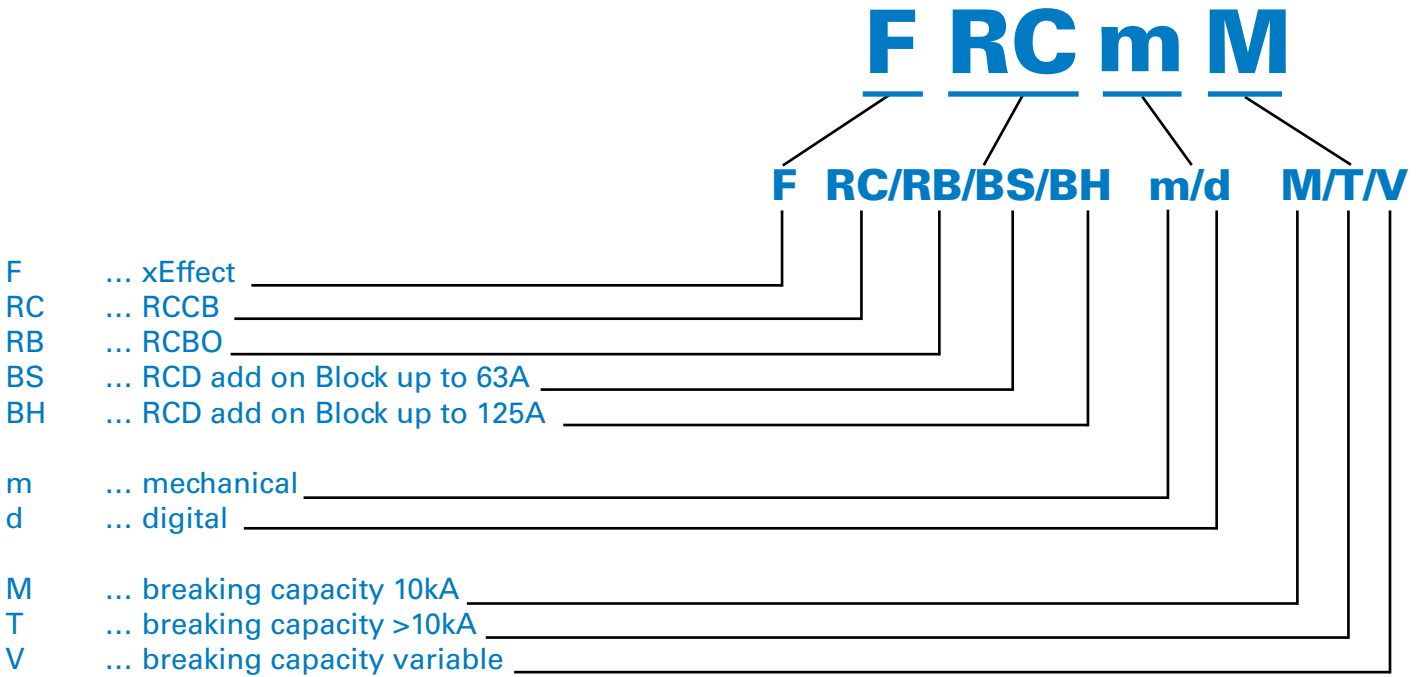

Benefits

- Rail certified MCBs & RCDs from one hand
- Electronic protection modules for safe and reliable protection of 24 VDC circuits
- Special characteristics to avoid nuisance tripping
- Digital RCDs to increase system availability
- RT MCBs & RCDs for safe & reliable electrical connections
- IEC 61373 (Shock & Vibration)
- EN 45545 (Smoke & Fire)

Safe & reliable connections

- Eaton's xEffect portfolio contains also special RT MCB & RCD ranges.
- The xEffect RT ranges are especially designed for the use with ring cable lugs.
- These ensure the highest safety and reliability for electrical connections.
- The PXS24 electronic protection modules are equipped with push-in terminals, another very reliable type of connection.

Description type designation RCD's

Description type designation MCB's

- FAZ ... MCBs up to 63A
- FAZT ... MCBS up to 40A with braking capacity >10kA
- AZ ... MCBs up to 125A

General definitions

- RCD ... Residual Current operated Device (umbrella term for RCCB and RCBO)
- RCCB ... Residual Current Circuit Breaker
- RCBO ... Residual Current Operated Circuit Breaker with Overcurrent Protection
- MCB ... Miniature Circuit Breaker

Residual Current Devices - General Data

Short description of the most important RCD types

| Symbol | Description |
|---|---|
|  | Eaton standard. Suitable for outdoor installation (distribution boxes for outdoor installation and building sites) up to -25° C. |
|  | Conditionally surge-current proof (>250 A, 8/20 μs) for general application. |
|  | Type AC: AC current sensitive RCCB |
|  | Type A: AC and pulsating DC current sensitive RCCB, not affected by smooth DC fault currents up to 6 mA |
|  | Type F: AC and pulsating DC current sensitive RCCB, trips also at frequency mixtures (10 Hz, 50 Hz, 1000 Hz), min. 10 ms time-delayed, min. 3 kA surge current proof, higher load capacity with smooth DC fault currents up to 10 mA |
|  | Frequency range up to 20 kHz |
|  | Trips also at frequency mixtures (10 Hz, 50 Hz, 1000 Hz) |
|  | Type B: All-current sensitive RCD switchgear for applications where DC fault currents may occur. Non-selective, non-delayed. Protection against all kinds of fault currents. |
|  | Type B+: All-current sensitive RCD switchgear for applications where DC fault currents may occur. Non-selective, non-delayed. Protection against all kinds of fault currents. Provides enhanced fire safety. |
|  | RCD of type G (min 10 ms time delay) surge current-proof up to 3 kA. For system components where protection against unwanted tripping is needed to avoid personal injury and damage to property. Also for systems involving long lines with high capacitive reactance. Some versions are sensitive to pulsating DC. Some versions are available in all-current sensitive design. |
|  | RCD of type S (selective, min 40 ms time delay) surge current-proof up to 5 kA. Mainly used as main switch, as well as in combination with surge arresters. This is the only RCD suitable for series connection with other types if the rated tripping current of the downstream RCD does not exceed one third of the rated tripping current of the device of type S. Some versions are sensitive to pulsating DC. Some versions are available in all-current sensitive design. |

Kind of residual current and correct use of RCD Types

| Kind of current | Current profile | Correct use / application field of RCCB types | | | | | | Tripping current |
|--|---|---|---|---|---|---|---|---|
| | | AC | A | F | B | / B+ | | |
| Sinusoidal AC residual current |  |  |  |  |  |  |  | 0.5 to 1.0 $I_{\Delta n}$ |
| Pulsating DC residual current (positive or negative half-wave) |  | - |  |  |  | | | 0.35 to 1.4 $I_{\Delta n}$ |
| Cut half-wave current |  | - |  |  |  | | | Lead angle 90°: 0.25 to 1.4 $I_{\Delta n}$ Lead angle 135°: 0.11 to 1.4 $I_{\Delta n}$ |
| Half-wave with smooth DC current of 6 mA |  | - |  |  |  | | | max. 1.4 $I_{\Delta n}$ + 6 mA |
| Half-wave with smooth DC current of 10 mA |  | - | - |  |  | | | max. 1.4 $I_{\Delta n}$ + 10 mA |
| Smooth DC current |  | - | - | - |  | | | 0.5 to 2.0 $I_{\Delta n}$ |

Tripping time

Break time and non-actuating time for alternating residual currents (r.m.s. values) for type AC and A RCCB

| Classification | $I_{\Delta n}$ mA | | $I_{\Delta n}$ | $2xI_{\Delta n}$ | $5xI_{\Delta n}$ | $5 x I_{\Delta n}$ or 0.25A | 500A |
|---|-------------------|--|----------------|------------------|------------------|-----------------------------|--------------|
| Standard RCD Conditionally surge current-proof 250 A | ≤30 | Max. tripping time (s) | 0.3 | 0.15 | | 0.04 | 0.04 |
| Standard RCD Conditionally surge current-proof 250 A | >30 | Max. tripping time (s) | 0.3 | 0.15 | 0.04 | | 0.04 |
| RCCB Type G (Short-time-delay) Surge current-proof 3 kA | 30 | Min. non actuating time(s) Max. tripping time (s) | 0.01 0.3 | 0.01 0.15 | | 0.01 0.04 | 0.01 0.04 |
| RCCB Type G (Short-time-delay) Surge current-proof 3 kA | >30 | Min. non actuating time(s) Max. tripping time (s) | 0.01 0.3 | 0.01 0.15 | 0.01 0.04 | | 0.01 0.04 |
| RCCB Type S (Selective) Surge current-proof 5 kA | >30 | Min. non actuating time(s) Max. tripping time (s) | 0.13 0.5 | 0.06 0.2 | 0.05 0.15 | | 0.04 0.15 |

Break time for half-wave pulsating residual currents (r.m.s. values) for type A RCCB

| Classification | $I_{\Delta n}$ mA | | $1.4xI_{\Delta n}$ | $2xI_{\Delta n}$ | $2.8xI_{\Delta n}$ | $4xI_{\Delta n}$ | $7 x I_{\Delta n}$ 0.35 A | 0.5 A | 350A |
|---|-------------------|------------------------|--------------------|------------------|--------------------|------------------|---------------------------|-------|------|
| Standard RCD Conditionally surge current-proof 250 A | <30 | Max. tripping time (s) | | 0.3 | | 0.15 | | 0.04 | 0.04 |
| Standard RCD Conditionally surge current-proof 250 A | 30 | Max. tripping time (s) | 0.3 | | 0.15 | | 0.04 | | 0.04 |
| Standard RCD Conditionally surge current-proof 250 A | >30 | Max. tripping time (s) | 0.3 | | 0.15 | | 0.04 | | 0.04 |
| RCCB Type G (Short-time-delay) Surge current-proof 3 kA | 30 | Max. tripping time (s) | 0.3 | | 0.15 | | 0.04 | | 0.04 |
| RCCB Type G (Short-time-delay) Surge current-proof 3 kA | >30 | Max. tripping time (s) | 0.3 | | 0.15 | | 0.04 | | 0.04 |
| RCCB Type S (Selective) Surge current-proof 5 kA | >30 | Max. tripping time (s) | 0.5 | | 0.2 | | 0.15 | | 0.15 |

Tripping Characteristics (IEC/EN 61008)

Tripping characteristics, tripping time range and selectivity of instantaneous, surge current-proof „G“ and surge current-proof - selective „S“ residual current devices.

IEC 60364-4-41 deals with additional protection: The use of RCDs with a rated residual operating current not exceeding 30 mA, is recognized in a.c. systems as additional protection in the event of failure of the provision for basic protection and/or the provision for fault protection or carelessness by users.

This means when using RCDs for fault current/residual current protection two RCDs must be connected in series.

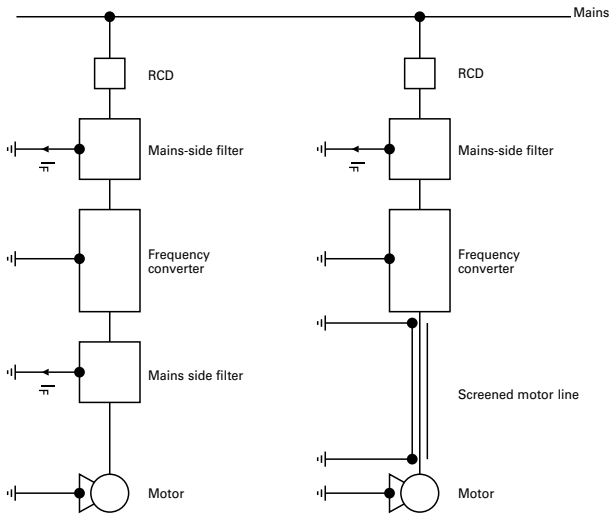

Testing:

RCDs with tripping time delay (Types -G and -S) may be function tested with conventional testing equipment which must be set according to the instructions for operation of the testing device. Due to reasons inherent in the measuring process, the tripping time determined in this way may be longer than expected in accordance with the specifications of the manufacturer of the measuring instrument.

However, the device is ok if the result of measurement is within the time range specified by the manufacturer of the measuring instrument.

Applications with frequency converters:

Due to the currents flowing off through the filters (designated IF), the sum of currents through the RCD is not exactly zero, which causes unwanted tripping.

Frequency converters are used in a wide variety of systems and equipment requiring variable speed, such as lifts, escalators, conveyor belts, and large washing machines. Using them for such purposes in circuits with conventional residual current devices causes frequent problems with unwanted tripping.

The technical root cause of this phenomenon is the following: Fast switching operations involving high voltages cause high interference levels which propagate through the lines on the one hand, and in the form of interfering radiation on the other. In order to eliminate this problem, a mains-side filter (also referred to as input filter or EMC-filter) is connected between the RCD and frequency converter. The anti-interference capacitors in the filters produce discharge currents against earth which may cause unwanted tripping of the RCD due to the apparent residual currents. Connecting a filter on the output side between frequency converter and 3-phase AC motor results in the same behaviour.

Tripping characteristic

This sample tripping characteristic of a 100 mA RCD and a 300 mA RCD shows the following: In the frequency range around 50 Hz, the RCDs trip as required (50 - 100 % of the indicated $I_{\Delta n}$). In the range shown hatched in the diagram, i. e. from approx. 100 to 300 Hz, unwanted tripping occurs frequently due to the use of frequency converters. Type F RCCBs are designed to reliably sense higher frequency residual currents, which leads to an enormous increase in the reliability and availability of electrical systems.

Therefore, we recommend to use RCDs designed for applications with frequency converter!

These special residual current devices can be recognised by an extension of the type designation („-F“). They meet the requirements of compatibility between RCDs and frequency converters with respect to unwanted tripping.

Eaton stands for highest availability of your system also in applications where frequency drives are used. Therefore a full suite of Type F RCCBs (mechanical and digital assisted) are available in all feasible ratings to assist you in your application needs.

Our RCDs of type „-F“ are characterized by:

- Improved capabilities of reliably sensing residual currents up to 1 kHz
- Improved capabilities of withstanding 10 mA DC offset
- 10 ms short time delay minimum (G/F)
- Surge current proofness of 3 kA (G/F) and 5 kA (S/F)

wa_sg08020_1

Description

- Line voltage independent RCCB for fault protection, additional protection as well as fire protection
- Additional digital functionality for improved system availability as well as system monitoring
- Live status of the system communicated through an integrated auxiliary contact as well as on the device itself
- Digital assisted sensing of residual current to achieve highest levels of system availability
- FRCdM reduces running costs due to a yearly test interval
- Fault current tripping indicator enables to determine the tripping reason
- Comprehensive accessories available
- Suitable to be put into rail rolling stock applications due to additional certification

Specifications | Residual Current Devices FRCdM

Description

Design

- Digital Residual Current Circuit Breakers (RCCBs)
- Designed and suitable to be put into an xEffect-System
- Twin-purpose terminal (lift/open-mouthed) above and below
- Contact position indicator red - green
- Tripping indicator white - blue
- Additional safety due:
 - possibility to seal the toggle
 - possibility to lock the toggle
- The device functions irrespective of the position of installation

Accessories

- Busbar positioning optionally above or below
- Free terminal space despite installed busbar
- Auxiliary contacts to be mounted onto the device:
 - Universal tripping signal switch, also suitable for FAZ, FRBmM-1N
 - Auxiliary switch Z-HK can be mounted subsequently

Additional information for the application

- Delayed types suitable for being used with standard fluorescent tubes with or without electronical ballast
 - 30mA-RCCBs: 30 units per phase conductor
 - 100mA RCCBs: 90 units per phase conductor

Note: Depending on the fluorescent lamp manufacturer, partly more units possible. Symmetrical allocation of the fluorescent lamp ballasts on all phases favorably. Please still consider the technical data provided by the manufacturer of the lamps.
- Tripping is line voltage independent (VI) and therefore suitable for all BA-classes.

The RCD is suitable for fault protection, additional protection, fire protection within the regulations of the applicable wiring regulations (e.g.: IEC/EN 60364)
- Independent supply side except applications according to connection diagram (2)
- The 4-pole device can also be used for 3-pole and 2 pole applications. Please refer to published connection diagrams

Test Button

- The test button "T" must be pressed once every 12 months. The system operator must be informed of this obligation and his responsibility in a way that can be proven.

Under special conditions (e.g.: damply and/or dusty environments, environments with polluting and/or corroding conditions, environments with large temperature fluctuations, installations with a risk of overvoltage due to switching of equipment and/or atmospheric discharges, portable equipment, ...), it's recommended to test in monthly intervals. Regulations according IEC/EN 60364 or wiring regulations still apply.

If red and yellow LED are present simultaneously, please press the test button and follow the instruction stated in the instruction leaflet.
- The test button "T" tests the function of the RCCB itself. This test does not measure a "suitable" fault loop or if requirements of such are kept. Testing your fault loop (earth rod resistance, continuity of fault loop,...) requires special tests performed separately.

Status Indication of digital RCCB

- System status as seen on the RCCB:
 - The green LED becomes active at 0-30% I_{Δn}
 - The yellow LED becomes active at 30-50% I_{Δn}, as well as the integrated auxiliary contact
 - The red LED becomes active at >50% I_{Δn}
 - Tolerance of system status indication: ± 5%

- The internal potential-free auxiliary contact (NO, terminals 13/14) for external communication is actuated starting at 30 I_{Δn}. The contact will stay "active" even after the breaker trips

The integrated auxiliary contact provides basic insulation from the main terminals of the RCCB. Without any additional protective measures (eg.: isolation transformer 1:1 according to IEC/EN 60664) the integrated auxiliary contact may only be supplied from the terminals 2, 4, 6, N. See also connection diagrams (2) and (3) for further details

- **Type A:** These types are capable of sensing pulsating residual currents and are not negatively affected by a DC overlay of up to 6mA. These devices (depending on the range) are also available as:
 - G/A short time delayed devices which are surge current proof up to 3kA. These devices enable a reliable and safe installation with increased system availability
 - S/A selective RCCBs with improved surge current capabilities up to 5kA. These devices are selective (conditions apply) to other RCDs and enable special applications and root installations.
- **Type F:** These types are capable of sensing pulsating residual currents, residual currents up to 1kHz and are not negatively affected by a DC overlay of up to 10mA. They also offer improved availability of your system. These devices (depending on the range) are also available as:
 - G/F short time delayed devices which are surge current proof up to 3kA. These devices enable a reliable and safe installation with increased system availability
 - S/F selective RCCBs with improved surge current capabilities up to 5kA. These devices are selective (conditions apply) to other RCDs and enable special applications and root installations.
- **Type G:** G Types offer a 10ms time delayed tripping curve and surge current proof capabilities up to 3kA and are highly recommended to be used for applications and installations where system availability is an important factor. Since "G" states a tripping curve and not a sensitivity, these devices (depending on the range) will be found as
 - AC sensitive devices (-G)
 - A Type RCCBs (-G/A)
 - F Type RCCBs (-G/F)
 - B/Bfq/B+ Type RCCBs (-G/B(fq/+))
- **Type S:** S Types offer a 40ms time delayed tripping curve and surge current proof capabilities up to 5kA and are known as "selective" types. These devices are mainly used in root applications with additional RCDs deployed in series in the system. Since "S" states a tripping curve and not a sensitivity, these devices (depending on the range) will be found as:
 - AC sensitive devices (-S)
 - A Type RCCBs (-S/A)
 - F Type RCCBs (-S/F)
 - B/Bfq/B+ Type RCCBs (-S/B(fq/+))

Local status indication provided by the digital RCCB

| LED signals | | red / yellow / green |
|------------------------|---|---|
| Permanent light green |  | Normal operation |
| Permanent light yellow |  | The currently measured residual current is higher than 30% I Δ n. The system is currently drawing a fault current, and actions should be taken accordingly. |
| Permanent light red |  | The currently measured residual current is higher than 50% I Δ n. The system is currently drawing a critical amount of fault current, and actions should be taken immediately. |
| Flashing yellow/red |  | Please press the test button (T). If the LEDs are still present, please refer to the instruction leaflet. |

Remotely communicated status indication provided by the digital RCCB

Integrated contact for use in control circuits. Please adhere to the electrical limits of the NO contacts (0,25A ohmic load @ 240V). Without any additional protective measures (eg.: isolation transformer 1:1 according to IEC/EN 60664) the integrated auxiliary contact may only be supplied from the terminals 2, 4, 6, N. See also connection diagrams (2) and (3) for further details.

Technical Data

| | | FRCdM |
|---|-------------------------|---|
| Electrical | | |
| Design according to | | IEC/EN 61008 Type G (G/A, G/F,...) acc. to ÖVE 8601 |
| Classified according to | | Type F acc. to IEC/EN 62423 |
| Current test marks as printed onto the device | | IEC 61373, EN 45545-2 |
| Tripping | | instantaneous |
| Type G , R | | 10 ms delay |
| Type S | | 40 ms delay - with selective disconnecting function |
| Rated voltage | U_n | 240/415 V AC, 50 Hz |
| Limits of operation voltage digital functions | | 50 – 264V AC |
| Limits of operation voltage test circuit | | |
| Rated tripping current | $I_{\Delta n}$ | 30, 100, 300 mA |
| Sensitivity | | AC and pulsating DC |
| Rated insulation voltage | U_i | 440 V |
| Rated impulse withstand voltage | U_{imp} | 4 kV (1.2/50 μ s) |
| Rated short circuit capacity | I_{cn} | 10 kA with back-up fuse |
| Peak withstand current | | |
| Type G (G/A, G/F) | | 3 kA (8/20 μ s) surge current-proof |
| Type S (S/A, S/F) | | 5 kA (8/20 μ s) selective + surge current-proof |
| Rated breaking capacity or rated fault breaking capacity | I_m $I_{\Delta m}$ | |
| $I_n = 25-40$ A | | 500 A |
| $I_n = 63$ A | | 630 A |
| $I_n = 80$ A | | 800 A |
| Endurance | | |
| electrical components | | $\geq 4,000$ operating cycles |
| mechanical components | | $\geq 20,000$ operating cycles |
| Mechanical | | |
| Frame size | | 45 mm |
| Device height | | 80 mm |
| Device width | | 70 mm (4MU) |
| Mounting | | quick fastening with 2 lock-in positions on DIN rail IEC/EN 60715 |
| Degree of protection, built-in | | IP40 |
| Degree of protection in moisture-proof enclosure | | IP54 |
| Upper and lower terminals | | open mouthed/lift terminals |
| Terminal protection | | finger and hand touch safe, DGUV VS3, EN 50274 |
| Terminal capacity | | 1.5 - 35 mm ² single wire 2 x 16 mm ² multi wire |
| Terminal screw | | M5 (with slotted screw acc. to EN ISO 4757-Z2, Pozidriv PZ2) |
| Terminal torque | | 2 - 2.4 Nm |
| Busbar thickness | | 0.8 - 2 mm |
| Operation temperature | | -25°C to +40°C (for higher values see table on ambient temperature) |
| Storage- and transport temperature | | -35°C to +60°C |
| Resistance to climatic conditions | | acc. to IEC/EN 61008 |
| Contact position indicator | | red / green |
| Tripping indicator | | white / blue |
| Internal contact | | |
| Rated breaking capacity @ 30 V DC (resistive load) | | 2 A |
| Rated breaking capacity @ 240 V AC (resistive load) | | 0.25 A |
| Maximum switching power (resistive load) | | 60 W |
| Maximum switching voltage DC | | 220 V |
| Maximum switching voltage AC | | 240 V |
| Maximum switching current | | 2 A |
| Minimum switching capacity (reference value) | | 10 μ A, 10 mV DC |
| Endurance | | |
| Electrical (at 20 cpm) 2 A 30 V DC resistive load) | | $>10^5$ |
| Electrical (at 20 cpm) 1 A 30 V DC resistive load) | | $>5 \times 10^5$ |
| Terminal capacity | | 0.25 - 1.5 mm ² |

Connection diagram

4-poles

① Without use of auxiliary contact line/load side free selectable

4-poles

② Signalisation without Isolation Transformer 1:1 (IEC/EN 60664)

4-poles

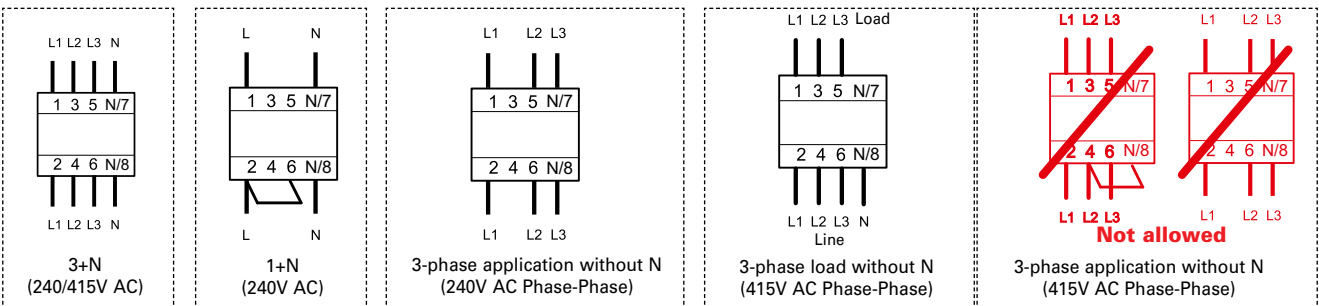

③ Signalisation with Isolation Transformer 1:1 (IEC/EN 60664)

Dimensions (mm)

Correct connection

30, 300mA Types:

Electronic works within 50-264V AC!

- Disconnect load side of the switch gear, if you make a insulation test of the installation!

Internal Resistance FRCdM

At room temperature (single pole)

| In [A] | Z* [mΩ] |
|--------|---------|
| 25 | 0.66 |
| 40 | 0.64 |
| 63 | 0.64 |
| 80 | 0.62 |

* 50Hz

Power Loss at In FRCdM

(entire unit)

| In [A] | P* [W] |
|--------|--------|
| 25 | 2.2 |
| 40 | 3.8 |
| 63 | 8.5 |
| 80 | 12.9 |

* 50Hz

Impact of ambient temperature on the maximum permanent current allowed (A) FRCdM type A and F

| Ambient temperature | 25A | 40A | 63A | 80A |
|---------------------|-----|-----|-----|-----|
| | 4p | 4p | 4p | 4p |
| 40° | 25 | 40 | 63 | 80 |
| 45° | 25 | 35 | 55 | 71 |
| 50° | 25 | 30 | 47 | 63 |
| 55° | 23 | 28 | 38 | 54 |
| 60° | 20 | 25 | 30 | 45 |
| 65° | - | - | - | - |
| 70° | - | - | - | - |
| 75° | - | - | - | - |

Note: Please make sure that these values are not exceeded and that any upstream thermal overload protection switches off in time.

Max. back-up fuse FRCDM

| Rating In [A] | Fuses | | MCB's (Characteristic B/C) | |
|------------------|-------------------|--------------|----------------------------|--------------|
| | Short Circuit [A] | Overload [A] | Short Circuit [A] | Overload [A] |
| 25 | 63 gG/gI | 25 gG/gI | FAZ-C40 | FAZ-C25 |
| 40 | 63 gG/gI | 40 gG/gI | FAZ-C40 | FAZ-C40 |
| 63 | 63 gG/gI | 63 gG/gI | FAZ-C40 | FAZ-C40 |
| 80 | 80 gG/gI | 80 gG/gI | - | - |

Important:

In the case that the maximal possible operating current of the electrical installation don't exceed the rated current of the RCD only short circuit protection must be implemented. Overload protection must be implemented in the case if the maximal possible operating current of the electrical installation can exceed the rated current of the RCD.

wa_sg04320_1

Description

- All current sensitive RCCBs to fulfil highest safety standards
- Line voltage independent 2 and 4 pole RCCB for fault protection, additional protection as well as fire protection
- As also stated in IEC/EN 62423, the B sensitivity relies on line voltage
- Additional digital functionality for improved system availability as well as system monitoring
- Live status of the system communicated through an integrated auxiliary contact as well as on the device itself
- Digital assisted sensing of residual current to achieve highest levels of system availability
- FRCDM reduce running costs due to a yearly test interval
- Fault current tripping indicator enables to determine the tripping reason
- Comprehensive accessories available
- Suitable to be put into rail rolling stock applications due to additional certification
- B+ types also meet the requirements of superior fire-protection systems according to VDE 0664-400

Specifications | Residual Current Devices FRCDM - digital, Type B, Bfq and B+

Description

Design

- Digital Residual Current Circuit Breakers (RCCBs)
- Designed and suitable to be put into an xEffect-System
- Twin-purpose terminal (lift/open-mouthed) above and below
- Contact position indicator red - green
- Tripping indicator white - blue
- Additional safety due:
 - possibility to seal the toggle
 - possibility to lock the toggle
- The device functions irrespective of the position of installation

Accessories

- Busbar positioning optionally above or below. (Please adhere to the supply side of the RCCB)
- Free terminal space despite installed busbar
- Auxiliary contacts to be mounted onto the device:
 - Universal tripping signal switch, also suitable for FAZ, FRBmM-1N
 - Auxiliary switch Z-HK can be mounted subsequently

Additional information for the application

- Delayed types suitable for being used with standard fluorescent tubes with or without electronical ballast
 - 30mA-RCCBs: 30 units per phase conductor
 - 100mA RCCBs: 90 units per phase conductor

Note: Depending on the fluorescent lamp manufacturer, partly more units possible. Symmetrical allocation of the fluorescent lamp ballasts on all phases favorably. Please still consider the technical data provided by the manufacturer of the lamps.
- Tripping is line voltage independent (VI) and therefore suitable for all BA-classes.

The RCD is suitable for fault protection, additional protection, fire protection within the regulations of the applicable wiring regulations (e.g.: IEC/EN 60364)
- Independent supply side except applications according to connection diagram (2)
- The 4-pole device can also be used for 3-pole and 2 pole applications. Please refer to published connection diagrams

Test Button

- The test button "T" must be pressed once every 12 months. The system operator must be informed of this obligation and his responsibility in a way that can be proven.

Under special conditions (e.g.: damply and/or dusty environments, environments with polluting and/or corroding conditions, environments with large temperature fluctuations, installations with a risk of overvoltage due to switching of equipment and/or atmospheric discharges, portable equipment, ...), it's recommended to test in monthly intervals. Regulations according IEC/EN 60364 or wiring regulations still apply.

If red and yellow LED are present simultaneously, please press the test button and follow the instruction stated in the instruction leaflet.

- The test button "T" tests the function of the RCCB itself. This test does not measure a "suitable" fault loop or if requirements of such are kept. Testing your fault loop (earth rod resistance, continuity of fault loop,...) requires special tests performed separately.

Status Indication of digital RCCB

- System status as seen on the RCCB:
 - The green LED becomes active at 0-30% I_{Δn}
 - The yellow LED becomes active at 30-50% I_{Δn}, as well as the integrated auxiliary contact
 - The red LED becomes active at >50% I_{Δn}
 - Tolerance of system status indication: ± 5%

- The internal potential-free auxiliary contact (NO, terminals 13/14) for external communication is actuated starting at 30 I_{Δn}. The contact will stay "active" even after the breaker trips

The integrated auxiliary contact provides basic insulation from the main terminals of the RCCB. Without any additional protective measures (eg.: isolation transformer 1:1 according to IEC/EN 60664) the integrated auxiliary contact may only be supplied from the terminals 2, 4, 6, N. See also connection diagrams (2) and (3) for further details.

- **Type B (fq, +):** These types offer the highest safety levels in electrical systems due to their all-current sensitivity and best in class reliability and system availability. Special type B from Eaton are available:
 - B+ limit the possibility of electrical ignited fires and should be considered for fire hazard applications as also mentioned in VDE-0664-400
 - Bfq are capable of reliably sensing residual currents up to 50 kHz
- **Type G:** G Types offer a 10 ms time delayed tripping curve and surge current proof capabilities up to 3 kA and are highly recommended to be used for applications and installations where system availability is an important factor. Since "G" states a tripping curve and not a sensitivity, these devices (dependent on the range) will be found as:
 - B/Bfq/B+ Type RCCBs (-G/B(fq/+))
- **Type S:** S Types offer a 40ms time delayed tripping curve and surge current proof capabilities up to 5kA and are known as "selective" types. These devices are mainly used in root applications with additional RCDs deployed in series in the system.

Since "S" states a tripping curve and not a sensitivity, these devices (dependent on the range) will be found as:

 - B/Bfq/B+ Type RCCBs (-S/B(fq/+))

Local status indication provided by the digital RCCB

| LED signals | | red / yellow / green |
|------------------------|---|---|
| Permanent light green |  | Normal operation |
| Permanent light yellow |  | The currently measured residual current is higher than 30% I _{Δn} . The system is currently drawing a fault current, and actions should be taken accordingly. |
| Permanent light red |  | The currently measured residual current is higher than 50% I _{Δn} . The system is currently drawing a critical amount of fault current, and actions should be taken immediately. |
| Flashing yellow/red |  | Please press the test button (T). If the LEDs are still present, please refer to the instruction leaflet. |

Remotely communicated status indication provided by the digital RCCB

Integrated contact for use in control circuits. Please adhere to the electrical limits of the NO contacts (0,25A ohmic load @ 240V). Without any additional protective measures (eg.: isolation transformer 1:1 according to IEC/EN 60664) the integrated auxiliary contact may only be supplied from the terminals 2, 4, 6, N. See also connection diagrams (2) and (3) for further details.

Max. back-up fuse FRCdM Type B

| Rating | Fuses | | MCB's (Characteristic B/C) | |
|--------|-------------------|--------------|----------------------------|--------------|
| | Short Circuit [A] | Overload [A] | Short Circuit [A] | Overload [A] |
| 25 | 63 gG/gI | 25 gG/gI | FAZ-C40 | FAZ-C25 |
| 40 | 63 gG/gI | 40 gG/gI | FAZ-C40 | FAZ-C40 |
| 63 | 63 gG/gI | 63 gG/gI | FAZ-C40 | FAZ-C40 |

Important:

In the case that the maximal possible operating current of the electrical installation don't exceed the rated current of the RCD only short circuit protection must be implemented. Overload protection must be implemented in the case if the maximal possible operating current of the electrical installation can exceed the rated current of the RCD.

SG02613

Description

- Line voltage independent RCCB for fault protection, additional protection as well as fire protection
- Complete range of RCCBs available to fulfil all application needs
- Fault current tripping indicator enables to determine the tripping reason
- Comprehensive accessories available
- Suitable to be put into rail rolling stock applications due to additional certification

SG02613

Description

- Line voltage independent RCCB for fault protection, additional protection as well as fire protection
- Complete range of RCCBs available to fulfill all application needs
- Special design to allow ring tongues to be fitted easily (terminal screws are removable)
- Fault current tripping indicator enables to determine the tripping reason
- Comprehensive accessories available
- Suitable to be put into rail rolling stock applications due to additional certification

Specifications | Residual Current Devices FRCmM

Description

Design

- Residual Current Circuit Breakers (RCCBs) for industrial and commercial applications
- Designed and suitable to be put into an xEffect-System
- Twin-purpose terminal (lift/open-mouthed) above and below
- Tripping indicator white - blue
- Additional safety due:
 - possibility to seal the toggle
 - possibility to lock the toggle
- The device functions irrespective of the position of installation

Accessories

- Busbar positioning optionally above or below
- Free terminal space despite installed busbar
- Auxiliary contacts to be mounted onto the device:
 - Universal tripping signal switch, also suitable for FAZ, FRBmM-1N
 - Auxiliary switch Z-HK can be mounted subsequently

Additional information for the application

- Delayed types suitable for being used with standard fluorescent tubes with or without electronical ballast
 - 30 mA-RCCBs: 30 units per phase conductor
 - 100 mA RCCBs: 90 units per phase conductor

Note: Depending on the fluorescent lamp manufacturer, partly more units possible. Symmetrical allocation of the fluorescent lamp ballasts on all phases favorably. Please still consider the technical data provided by the manufacturer of the lamps.

- Tripping is line voltage independent (VI) and therefore suitable for all BA-classes.

The RCD is suitable for fault protection, additional protection, fire protection within the regulations of the applicable wiring regulations (e.g.: IEC/EN 60364)

- The 4-pole device can also be used for 3-pole and 2 pole applications. Please refer to published connection diagrams

Test Button

- The test button "T" must be pressed once every 6 months. The system operator must be informed of this obligation and his responsibility in a way that can be proven.

Under special conditions (e.g.: damply and/or dusty environments, environments with polluting and/or corroding conditions, environments with large temperature fluctuations, installations with a risk of overvoltage due to switching of equipment and/or atmospheric discharges, portable equipment, ...), it's recommended to test in monthly intervals. Regulations according IEC/EN 60364 or wiring regulations still apply.
- The test button "T" tests the function of the RCCB itself. This test does not measure a "suitable" fault loop or if requirements of such are kept. Testing your fault loop (earth rod resistance, continuity of fault loop,...) requires special tests performed separately.

- **Type A:** These types are capable of sensing pulsating residual currents and are not negatively affected by a DC overlay of up to 6mA. These devices (depended on the range) are also available as:
 - G/A short time delayed devices which are surge current proof up to 3kA. These devices enable a reliable and safe installation with increased system availability
 - S/A selective RCCBs with improved surge current capabilities up to 5kA. These devices are selective (conditions apply) to other RCDs and enable special applications and root installations.
- **Type F:** These types are capable of sensing pulsating residual currents, residual currents up to 1kHz and are not negatively affected by a DC overlay of up to 10mA. They also offer improved availability of your system. These devices (depended on the range) are also available as:
 - G/F short time delayed devices which are surge current proof up to 3 kA. These devices enable a reliable and safe installation with increased system availability
 - S/F selective RCCBs with improved surge current capabilities up to 5kA. These devices are selective (conditions apply) to other RCDs and enable special applications and root installations.
- **Type G:** G Types offer a 10ms time delayed tripping curve and surge current proof capabilities up to 3kA and are highly recommended to be used for applications and installations where system availability is an important factor. Since "G" states a tripping curve and not a sensitivity, these devices (depended on the range) will be found as:
 - AC sensitive devices (-G)
 - A Type RCCBs (-G/A)
 - F Type RCCBs (-G/F)
 - B/Bfq/B+ Type RCCBs (-G/B(fq/+))
- **Type S:** S Types offer a 40ms time delayed tripping curve and surge current proof capabilities up to 5kA and are know as "selective" types. These devices are mainly used in root applications with additional RCDs deployed in series in the system.

Since "S" states a tripping curve and not a sensitivity, these devices (dependent on the range) will be found as:

 - AC sensitive devices (-S)
 - A Type RCCBs (-S/A)
 - F Type RCCBs (-S/F)

Note: Please make sure that these values are not exceeded and that any upstream thermal overload protection switches off in time.

Max. back-up fuse FRCmM

| Rating In [A] | Fuses | | MCB's (Characteristic B/C) | |
|------------------|-------------------|--------------|----------------------------|--------------|
| | Short Circuit [A] | Overload [A] | Short Circuit [A] | Overload [A] |
| 25 | 63 gG/gI | 25 gG/gI | FAZ-C40 | FAZ-C25 |
| 40 | 63 gG/gI | 40 gG/gI | FAZ-C40 | FAZ-C40 |
| 63 | 63 gG/gI | 63 gG/gI | FAZ-C40 | FAZ-C40 |
| 80 | 80 gG/gI | 80 gG/gI | - | - |
| 100 | 100 gG/gI | 80 gG/gI | - | - |

Important:

In the case that the maximal possible operating current of the electrical installation don't exceed the rated current of the RCD only short circuit protection must be implemented. Overload protection must be implemented in the case if the maximal possible operating current of the electrical installation can exceed the rated current of the RCD.

SG02613

Description

- Line voltage independent RCCB for fault protection, additional protection as well as fire protection
- For use in 110V applications
- Complete range of RCCBs available to fulfil all application needs
- Fault current tripping indicator enables to determine the tripping reason
- Comprehensive accessories available
- Suitable to be put into rail rolling stock applications due to additional certification

Specifications | Residual Current Devices FRCmM-110

Description

Design

- Residual Current Circuit Breakers (RCCBs) for industrial and commercial applications which operate with 110V
- Designed and suitable to be put into an xEffect-System
- Twin-purpose terminal (lift/open-mouthed) above and below
- Contact position indicator red - green
- Tripping indicator white - blue
- Additional safety due:
 - possibility to seal the toggle
 - possibility to lock the toggle
- The device functions irrespective of the position of installation

Accessories

- Busbar positioning optionally above or below
- Free terminal space despite installed busbar
- Auxiliary contacts to be mounted onto the device:
 - Universal tripping signal switch, also suitable for FAZ, FRBmM-1N
 - Auxiliary switch Z-HK can be mounted subsequently

Additional information for the application

- Tripping is line voltage independent (VI) and therefore suitable for all BA-classes.
The RCD is suitable for fault protection, additional protection, fire protection within the regulations of the applicable wiring regulations (e.g.: IEC/EN 60364)
- The 4-pole device can also be used for 3-pole and 2 pole applications. Please refer to published connection diagrams

Test Button

- The test button "T" must be pressed once every 6 months. The system operator must be informed of this obligation and his responsibility in a way that can be proven.
Under special conditions (e.g.: damply and/or dusty environments, environments with polluting and/or corroding conditions, environments with large temperature fluctuations, installations with a risk of overvoltage due to switching of equipment and/or atmospheric discharges, portable equipment, ...), it's recommended to test in monthly intervals. Regulations according IEC/EN 60364 or wiring regulations still apply.

- The test button "T" tests the function of the RCCB itself. This test does not measure a "suitable" fault loop or if requirements of such are kept. Testing your fault loop (earth rod resistance, continuity of fault loop,...) requires special tests performed separately.
- **Type A** These types are capable of sensing pulsating residual currents and are not negatively affected by a DC overlay of up to 6 mA.

SG49612

Description

- Line voltage independent RCCB for fault protection, additional protection as well as fire protection
- Certified according UL 1053 and IEC/EN 61008 to be used in applications worldwide
- Comprehensive range of RCCBs available to fulfil most application needs
- Fault current tripping indicator enables to determine the tripping reason
- Comprehensive accessories available
- Suitable to be put into rail rolling stock applications due to additional certification

Specifications | Residual Current Devices FRCmM-NA

Description

Design

- Residual Current Circuit Breakers (RCCBs) for worldwide industrial and commercial applications
- Designed and suitable to be put into an xEffect-System
- Twin-purpose terminal (lift/open-mouthed) above and below
- Contact position indicator red - green
- Tripping indicator white - blue
- Additional safety due:
 - possibility to seal the toggle
 - possibility to lock the toggle
- The device functions irrespective of the position of installation

Accessories

- Busbar positioning optionally above or below
- Free terminal space despite installed busbar
- Auxiliary contacts to be mounted onto the device:
 - Universal tripping signal switch, also suitable for FAZ, FRBmM-1N
 - Auxiliary switch Z-HK can be mounted subsequently

Additional information for the application

- Delayed types suitable for being used with standard fluorescent tubes with or without electronical ballast
 - 30 mA-RCCBs: 30 units per phase conductor
 - 100 mA RCCBs: 90 units per phase conductor

Note: Depending on the fluorescent lamp manufacturer, partly more units possible. Symmetrical allocation of the fluorescent lamp ballasts on all phases favorably. Please still consider the technical data provided by the manufacturer of the lamps.
- Tripping is line voltage independent (VI) and therefore suitable for all BA-classes.

The RCD is suitable for fault protection, additional protection, fire protection within the regulations of the applicable wiring regulations (e.g.: IEC/EN 60364)
- The 4-pole device can also be used for 3-pole and 2 pole applications. Please refer to published connection diagrams

Test Button

- The test button "T" must be pressed once every 6 months. The system operator must be informed of this obligation and his responsibility in a way that can be proven.

Under special conditions (e.g.: damply and/or dusty environments, environments with polluting and/or corroding conditions, environments with large temperature fluctuations, installations with a risk of overvoltage due to switching of equipment and/or atmospheric discharges, portable equipment, ...), it's recommended to test in monthly intervals. Regulations according IEC/EN 60364 or wiring regulations still apply.
- The test button "T" tests the function of the RCCB itself. This test does not measure a "suitable" fault loop or if requirements of such are kept. Testing your fault loop (earth rod resistance, continuity of fault loop,...) requires special tests performed separately.
- **Type A** These types are capable of sensing pulsating residual currents and are not negatively affected by a DC overlay of up to 6 mA. These devices are also available as:
 - G/A short time delayed devices which are surge current proof up to 3 kA. These devices enable a reliable and safe installation with increased system availability
- **Type G** G Types offer a 10 ms time delayed tripping curve and surge current proof capabilities up to 3 kA and are highly recommended to be used for applications and installations where system availability is an important factor.

Since "G" states a tripping curve and not a sensitivity, these devices can also be found as:

 - A Type RCCBs (-G/A-NA)

| 65° | – | – | 20 | 24 | 40 | 41 |
| 70° | – | – | 14 | 19 | 34 | 37 |
| 75° | – | – | 8 | 15 | 28 | 31 |

Note: Please make sure that these values are not exceeded and that any upstream thermal overload protection switches off in time.

Max. back-up fuse FRCmM-NA (acc. to IEC)

| Rating | Fuses | | MCB's (Characteristic B/C) | |
|--------|-------------------|--------------|----------------------------|--------------|
| | Short Circuit [A] | Overload [A] | Short Circuit [A] | Overload [A] |
| 25 | 63 gG/gI | 25 gG/gI | FAZ-C40 | FAZ-C25 |
| 40 | 63 gG/gI | 40 gG/gI | FAZ-C40 | FAZ-C40 |
| 63 | 63 gG/gI | 40 gG/gI | FAZ-C40 | FAZ-C40 |

Important:

In the case that the maximal possible operating current of the electrical installation don't exceed the rated current of the RCD only short circuit protection must be implemented. Overload protection must be implemented in the case if the maximal possible operating current of the electrical installation can exceed the rated current of the RCD.

Max. back-up fuse FRCmM-NA (acc. to UL)

| Rating | Short Circuit [A] |
|--------|-------------------|
| 25-63 | 70 J-Class Fuse |

Important:

The maximal possible operating current of the electrical installation may not exceed the rated current of the RCD (VDE 0100-520 Bbl. 2).

SG49612

Description

- Line voltage independent RCCB for fault protection, additional protection as well as fire protection
- Certified according UL 1053 and IEC/EN 61008 to be used in 110V applications worldwide
- Comprehensive range of RCCBs available to fulfil most application needs
- Fault current tripping indicator enables to determine the tripping reason
- Comprehensive accessories available
- Suitable to be put into rail rolling stock applications due to additional certification

Specifications | Residual Current Devices FRcmM-NA-110

Description

Design

- Residual Current Circuit Breakers (RCCBs) for worldwide industrial and commercial applications which operate with 110V
- Designed and suitable to be put into an xEffect-System
- Twin-purpose terminal (lift/open-mouthed) above and below
- Contact position indicator red - green
- Tripping indicator white - blue
- Additional safety due:
 - possibility to seal the toggle
 - possibility to lock the toggle
- The device functions irrespective of the position of installation

Accessories

- Busbar positioning optionally above or below
- Free terminal space despite installed busbar
- Auxiliary contacts to be mounted onto the device:
 - Universal tripping signal switch, also suitable for FAZ, FRBmM-1N
 - Auxiliary switch Z-HK can be mounted subsequently

Additional information for the application

- Delayed types suitable for being used with standard fluorescent tubes with or without electronical ballast
 - 30 mA-RCCBs: 30 units per phase conductor
 - 100 mA RCCBs: 90 units per phase conductor

Note: Depending on the fluorescent lamp manufacturer, partly more units possible. Symmetrical allocation of the fluorescent lamp ballasts on all phases favorably. Please still consider the technical data provided by the manufacturer of the lamps.
- Tripping is line voltage independent (VI) and therefore suitable for all BA-classes.

The RCD is suitable for fault protection, additional protection, fire protection within the regulations of the applicable wiring regulations (e.g.: IEC/EN 60364)
- The 4-pole device can also be used for 3-pole and 2 pole applications. Please refer to published connection diagrams

Test Button

- The test button "T" must be pressed once every 6 months. The system operator must be informed of this obligation and his responsibility in a way that can be proven.

Under special conditions (e.g.: damply and/or dusty environments, environments with polluting and/or corroding conditions, environments with large temperature fluctuations, installations with a risk of overvoltage due to switching of equipment and/or atmospheric discharges, portable equipment, ...), it's recommended to test in monthly intervals. Regulations according IEC/EN 60364 or wiring regulations still apply.
- The test button "T" tests the function of the RCCB itself. This test does not measure a "suitable" fault loop or if requirements of such are kept. Testing your fault loop (earth rod resistance, continuity of fault loop,...) requires special tests performed separately.

- **Type A:** These types are capable of sensing pulsating residual currents and are not negatively affected by a DC overlay of up to 6mA. These devices are also available as:

-G/A short time delayed devices which are surge current proof up to 3kA. These devices enable a reliable and safe installation with increased system availability

- **Type G:** G Types offer a 10ms time delayed tripping curve and surge current proof capabilities up to 3kA and are highly recommended to be used for applications and installations where system availability is an important factor. Since "G" states a tripping curve and not a sensitivity, these devices can also be found as:

- A Type RCCBs (-G/A-NA)

4-poles

30, 300mA Types:

Impact of ambient temperature on the maximum permanent current allowed (A) FRCmM-NA-110

| Ambient temperature | 25A | | 40A | | 63A | |
|---------------------|-----|----|-----|----|-----|----|
| | 2p | 4p | 2p | 4p | 2p | 4p |
| 40° | 25 | 25 | 40 | 40 | 63 | 63 |
| 45° | 21 | 22 | 37 | 37 | 59 | 59 |
| 50° | 18 | 19 | 33 | 34 | 55 | 55 |
| 55° | 14 | 16 | 30 | 31 | 50 | 50 |
| 60° | – | – | 26 | 27 | 45 | 45 |
| 65° | – | – | 20 | 24 | 40 | 41 |
| 70° | – | – | 14 | 19 | 34 | 37 |
| 75° | – | – | 8 | 15 | 28 | 31 |

Note: Please make sure that these values are not exceeded and that any upstream thermal overload protection switches off in time.

Max. back-up fuse FRCmM-NA-110 (acc. to IEC)

| Rating In [A] | Fuses | | MCB's (Characteristic B/C) | |
|------------------|-------------------|--------------|----------------------------|--------------|
| | Short Circuit [A] | Overload [A] | Short Circuit [A] | Overload [A] |
| 25 | 63 gG/gI | 25 gG/gI | FAZ-C40 | FAZ-C25 |
| 40 | 63 gG/gI | 40 gG/gI | FAZ-C40 | FAZ-C40 |
| 63 | 63 gG/gI | 40 gG/gI | FAZ-C40 | FAZ-C40 |

Important:
In the case that the maximal possible operating current of the electrical installation don't exceed the rated current of the RCD only short circuit protection must be implemented. Overload protection must be implemented in the case if the maximal possible operating current of the electrical installation can exceed the rated current of the RCD.

Max. back-up fuse FRCmM-NA-110 (acc. to UL)

| Rating In [A] | Short Circuit [A] |
|------------------|-------------------|
| 25-63 | 70 J-Class Fuse |

Important:
The maximal possible operating current of the electrical installation may not exceed the rated current of the RCD (VDE 0100-520 Bbl. 2).

SG08013

Description

- Comprehensive range of RCCBs with a rating of 125A
- All current sensitive Type B RCCBs to fulfil highest safety standards
- Line voltage independent 2 and 4 pole RCCB for fault protection, additional protection as well as fire protection
- As also stated in IEC/EN 62423, the B sensitivity relies on line voltage

Specifications | Residual Current Devices FRcmM-125, Type A

Description**Design**

- Residual Current Circuit Breakers (RCCBs) for application with higher rated nominal current
- Twin-purpose terminal (lift/open-mouthed) above and below
- Contact position indicator red - green
- The device functions irrespective of the position of installation

Accessories

- Auxiliary contact Z-HD to be mounted onto the device

Additional information for the application

- Tripping is line voltage independent (VI) and therefore suitable for all BA-classes.
The RCD is suitable for fault protection, additional protection, fire protection within the regulations of the applicable wiring regulations (e.g.: IEC/EN 60364)

Test Button

- The test button "T" must be pressed once every 6 months. The system operator must be informed of this obligation and his responsibility in a way that can be proven.
Under special conditions (e.g.: damply and/or dusty environments, environments with polluting and/or corroding conditions, environments with large temperature fluctuations, installations with a risk of overvoltage due to switching of equipment and/or atmospheric discharges, portable equipment, ...), it's recommended to test in monthly intervals. Regulations according IEC/EN 60364 or wiring regulations still apply.
- The test button "T" tests the function of the RCCB itself. This test does not measure a "suitable" fault loop or if requirements of such are kept. Testing your fault loop (earth rod resistance, continuity of fault loop,...) requires special tests performed separately.

- **Type A:** These types are capable of sensing pulsating residual currents and are not negatively affected by a DC overlay of up to 6mA. These devices (depending on the range) are also available as:
 - G/A short time delayed devices which are surge current proof up to 3 kA. These devices enable a reliable and safe installation with increased system availability
 - S/A selective RCCBs with improved surge current capabilities up to 5 kA. These devices are selective (conditions apply) to other RCDs and enable special applications and root installations.
- **Type G:** G Types offer a 10ms time delayed tripping curve and surge current proof capabilities up to 3kA and are highly recommended to be used for applications and installations where system availability is an important factor. Since "G" states a tripping curve and not a sensitivity, these devices (depending on the range) will be found as:
 - A Type RCCBs (-G/A)
- **Type S:** S Types offer a 40ms time delayed tripping curve and surge current proof capabilities up to 5kA and are known as "selective" types. These devices are mainly used in root applications with additional RCDs deployed in series in the system. Since "S" states a tripping curve and not a sensitivity, these devices (depending on the range) will be found as:
 - S/A Type RCCBs

Specifications | Residual Current Devices FRCmM-125, Type B, Bfg and B+

Description

Design

- All current sensitive Residual Current Circuit Breakers (RCCBs) for application with higher rated nominal current
- Twin-purpose terminal (lift/open-mouthed) above and below
- Contact position indicator red - green
- The device functions irrespective of the position of installation

Accessories

- Auxiliary contact Z-HD to be mounted onto the device

Additional information for the application

- Tripping is line voltage independent (VI) and therefore suitable for all BA-classes.
The RCD is suitable for fault protection, additional protection, fire protection within the regulations of the applicable wiring regulations (e.g.: IEC/EN 60364)
- As also stated in IEC/EN 62423, the B sensitivity relies on line voltage

Test Button

- The test button "T" must be pressed once every 6 months. The system operator must be informed of this obligation and his responsibility in a way that can be proven.
Under special conditions (e.g.: damply and/or dusty environments, environments with polluting and/or corroding conditions, environments with large temperature fluctuations, installations with a risk of overvoltage due to switching of equipment and/or atmospheric discharges, portable equipment, ...), it's recommended to test in monthly intervals. Regulations according IEC/EN 60364 or wiring regulations still apply.
- The test button "T" tests the function of the RCCB itself. This test does not measure a "suitable" fault loop or if requirements of such are kept. Testing your fault loop (earth rod resistance, continuity of fault loop,...) requires special tests performed separately.

- **Type B (fq, +):** These types offer the highest safety levels in electrical systems due to their all-current sensitivity and best in class reliability and system availability. Special type B from Eaton are available:
 - B+ limit the possibility of electrical ignited fires and should be considered for fire hazard applications as also mentioned in VDE-0664-400
 - Bfq are capable of reliably sensing residual currents up to 100 kHz
- **Type G:** G Types offer a 10 ms time delayed tripping curve and surge current proof capabilities up to 3 kA and are highly recommended to be used for applications and installations where system availability is an important factor. Since "G" states a tripping curve and not a sensitivity, these devices (dependent on the range) will be found as:
 - B/B+ Type RCCBs (-G/B(+))
- **Type S:** S Types offer a 40 ms time delayed tripping curve and surge current proof capabilities up to 5 kA and are known as "selective" types. These devices are mainly used in root applications with additional RCDs deployed in series in the system. Since "S" states a tripping curve and not a sensitivity, these devices (dependent on the range) will be found as:
 - S/Bfq Type RCCBs

SG05613

Description

- High-quality residual current device / miniature circuit breaker combination, line voltage-dependent
- 1+N-poles and 2-poles
- Increased protection in applications with 1-phase frequency converter due to the detection of mixed frequencies (type F)
- Reduction of nuisance tripping (type F or G/A) thanks to
 - time delayed tripping
 - increased current withstand capability
 - 3 kA
- Higher load rating with DC residual currents up to 10 mA (Type F)
- Contact position indicator red - green
- Tripping indicator white - blue
- New level of accuracy due to electronic fault current detection
- Local status indication of residual current through 3 LEDs
- 3-position DIN rail clip, permits removal from existing busbar system
- Comprehensive range of accessories suitable for subsequent installation
- Wide variety of rated tripping currents
- Rated currents up to 25 A
- Tripping characteristics B, C, D
- Rated breaking capacity 10 kA

Specifications | Combined RCD/MCB Devices FRBdM, digital

Description

- Combined RCD/MCB device
- Line voltage-dependent tripping
- Compatible with standard busbar
- Twin-purpose terminal (lift/open-mouthed) above and below
- Busbar positioning optionally above or below
- Free terminal space despite installed busbar
- Guide for secure terminal connection
- Contact position indicator red - green
- Fault current tripping indicator white - blue
- Comprehensive range of accessories suitable for subsequent installation
- The test key "T" must be pressed every year. The system operator must be informed of this obligation and his responsibility in a way that can be proven. Under special conditions (e.g. damply and/or dusty environments, environments with polluting and/or corroding conditions, environments with large temperature fluctuations, installations with a risk of overvoltages due to switching of equipment and/or atmospheric discharges, portable equipment ...), it's recommended to test in monthly intervals.
- Pressing the test key "T" serves the only purpose of function testing the residual current device (RCD). This test does not make earthing resistance measurement (R_E), or proper checking of the earth conductor condition redundant, which must be performed separately.
- **Type -A:** Protects against special forms of residual pulsating DC which have not been smoothed.
- **Type -G/A:** High reliability against unwanted tripping. Suitable for any circuit where personal injury or damage to property may occur in case of unwanted tripping. Additionally protects against special forms of residual pulsating DC which have not been smoothed.
- **Type -F:** Sensitive to pulsating DC residual current and detection of multifrequency residual currents up to 1 kHz
 - Increased protection due to the detection of mixed frequencies
 - Higher load rating with DC residual currents up to 10mA
 - Reduction of nuisance tripping thanks to time delayed tripping and increased current withstand capability of 3 kA
 Recommended for washing machines, dish washers, or motor applications with single-phase drives.

Accessories:

| | | |
|--|------------|----------------|
| Auxiliary switch for subsequent installation | ZP-IHK | 286052 |
| | ZP-WHK | 286053 |
| Tripping signal switch for subsequent installation | ZP-NHK | 248437 |
| Shunt trip release | ZP-ASA/.. | 248438, 248439 |
| Terminal cover 2-poles | Z-TC/SD-2P | 178099 |

Local Indication RCD

Service Mode (measuring of residual current I_{Δ})

Pressing test button twice to activate Service-Mode

| | |
|--|--|
| Measurement delimiter | red |
| Measurement delimiter ON time | 400 ms |
| 10 mA measurement color | amber |
| 1 mA measurement color | green |
| Double-pressing test button to activate Service Mode | press (0.1-0.4 s) -> release (0.1-0.4 s) -> press (0.1-0.4 s) |
| Time duration of Service Mode | 4 min (during activated Service Mode all protection functions are still working) |

Short-circuit Selectivity FRBdM

In case of a short-circuit, selectivity is provided up to the specified selective current values I_s (kA) applicable between the FRBdM RCD/MCB circuit breakers and the up-stream protective devices.

When a short-circuit occurs, this means that with I_{KS} current values below I_s only the MCB will trip. However, in case of short-circuit currents beyond these values both protective devices will trip.

SG03013

Description

- High-quality residual current device / miniature circuit breaker combination, line voltage-independent
- Increased protection in applications with 1-phase frequency converter due to the detection of mixed frequencies (type F)
- Reduction of nuisance tripping (type F, G, or G/A) thanks to
 - time delayed tripping
 - increased current withstand capability >3 kA
- Higher load rating with DC residual currents up to 10 mA (type F)
- Contact position indicator red - green
- Fault current tripping indicator
- Guide for secure terminal connection
- 3-position DIN rail clip, permits removal from existing busbar system
- Comprehensive range of accessories suitable for subsequent installation
- Wide variety of rated tripping currents
- Rated currents up to 40 A
- Tripping characteristics B, C, D
- Rated breaking capacity acc. to IEC/EN 61009 10 kA
- Rated breaking capacity acc. to IEC/EN 60947-2 up to 15 kA
- Classified for the use in rail rolling stock

SG03013

Description

- A range of residual current device / miniature circuit breaker combination for a wide range of applications with the added benefit of accepting cables fitted with Ring Tongue connections - as used on applications such as Rail rolling stock etc.
- Line voltage independent
- Contact position indicator red - green
- Fault current tripping indicator
- Guide for secure terminal connection
- 3-position DIN rail clip, permits removal from existing busbar system
- Comprehensive range of accessories suitable for subsequent installation
- Wide variety of rated tripping currents
- Rated currents up to 40 A
- Tripping characteristics B, C, D
- Rated breaking capacity acc. to IEC/EN 61009 10 kA
- Rated breaking capacity acc. to IEC/EN 60947-2 up to 15 kA
- Classified for the use in rail rolling stock

Specifications | Combined RCD/MCB Devices FRBm., 1+N-poles

Description

- Combined RCD/MCB device
- Line voltage-independent tripping
- Compatible with standard busbar
- Twin-purpose terminal (lift/open-mouthed) above and below
- Busbar positioning optionally above or below
- Free terminal space despite installed busbar
- Guide for secure terminal connection
- Contact position indicator red - green
- Comprehensive range of accessories suitable for subsequent installation
- Nameplate
- The test key "T" must be pressed every 6 months. The system operator must be informed of this obligation and his responsibility in a way that can be proven. Under special conditions (e.g. damply and/or dusty environments, environments with polluting and/or corroding conditions, environments with large temperature fluctuations, installations with a risk of overvoltages due to switching of equipment and/or atmospheric discharges, portable equipment ...), it's recommended to test in monthly intervals.
- Pressing the test key "T" serves the only purpose of function testing the residual current device (RCD). This test does not make earthing resistance measurement (R_E), or proper checking of the earth conductor condition redundant, which must be performed separately.
- **Type -A:** Protects against special forms of residual pulsating DC which have not been smoothed.
- **Type -G:** High reliability against unwanted tripping. Suitable for any circuit where personal injury or damage to property may occur in case of unwanted tripping.
- **Type -F:** Increased protection in applications with 1phase frequency converter due to the detection of mixed frequencies, higher load capacity with smooth DC fault currents up to 10 mA.

Let-through Energy FRBmM, Characteristic D, 1+Npolig

Short-circuit Selectivity FRBmM-../1N/

In case of a short-circuit, selectivity is provided up to the specified selective current values I_s (kA) applicable between the FRBmM RCD/MCB circuit breakers and the up-stream protective devices.

When a short-circuit occurs, this means that with I_{KS} current values below I_s only the MCB will trip. However, in case of short-circuit currents beyond these values both protective devices will trip.

FRBmM-../1N/ and DII-DIV fuse link

Short-circuit Selectivity **Characteristic B** towards fuse link **DII-DIV***)

xEffect

Combined RCD/MCB Devices FRBmM, FRBm6, 2-poles, Type AC, A, G/A and F

SG02913

Description

- High-quality residual current device / miniature circuit breaker combination, line voltage-independent
- Increased protection in applications with 1-phase frequency converter due to the detection of mixed frequencies (type F)
- Reduction of nuisance tripping (type F or G/A) thanks to
 - time delayed tripping
 - increased current withstand capability (3 kA)
- Higher load rating with DC residual currents up to 10 mA (type F)
- Contact position indicator red - green
- Fault current tripping indicator white - blue
- Guide for secure terminal connection
- 3-position DIN rail clip, permits removal from existing busbar system
- Comprehensive range of accessories suitable for subsequent installation
- Wide variety of rated tripping currents
- Rated currents up to 40 A
- Tripping characteristics B, C
- Rated breaking capacity 10 kA and 6 kA
- Classified for the use in rail rolling stock

Specifications | Combined RCD/MCB Devices FRBmM, FRBm6, 2-poles

Description

- Combined RCD/MCB device
- Line voltage-independent tripping
- Compatible with standard busbar
- Twin-purpose terminal (lift/open-mouthed) above and below
- Busbar positioning optionally above or below
- Free terminal space despite installed busbar
- Guide for secure terminal connection
- Contact position indicator red - green
- Fault current tripping indicator white - blue
- Comprehensive range of accessories suitable for subsequent installation
- The test key "T" must be pressed every 6 months. The system operator must be informed of this obligation and his responsibility in a way that can be proven. Under special conditions (e.g. damply and/or dusty environments, environments with polluting and/or corroding conditions, environments with large temperature fluctuations, installations with a risk of overvoltages due to switching of equipment and/or atmospheric discharges, portable equipment ...), it's recommended to test in monthly intervals.
- Pressing the test key "T" serves the only purpose of function testing the residual current device (RCD). This test does not make earthing resistance measurement (R_e), or proper checking of the earth conductor condition redundant, which must be performed separately.
- **Type -A:** Protects against special forms of residual pulsating DC which have not been smoothed.
- **Type -Super A:** High reliability against unwanted tripping. Suitable any circuit where personal injury or damage to property may occur in case of unwanted tripping.
- **Type -G/A:** High reliability against unwanted tripping. Suitable for any circuit where personal injury or damage to property may occur in case of unwanted tripping. Additionally protects against special forms of residual pulsating DC which have not been smoothed.
- **Type -F:** Sensitive to pulsating DC residual current and detection of multifrequency residual currents up to 1 kHz
 - Increased protection due to the detection of mixed frequencies
 - Higher load rating with DC residual currents up to 10mA
 - Reduction of nuisance tripping thanks to time delayed tripping and increased current withstand capability of 3 kA
 Recommended for washing machines, dish washers, or motor applications with single-phase drives.

| Design according to | | IEC/EN 61009 Type G according to ÖVE E 8601 IEC 61373, EN 45545-2 | |
| Classified according to | | | |
| Current test marks as printed onto the device | | | |
| Tripping line voltage-independent | | instantaneous tripping, conditional surge current proof 250 A (8/20 µs) surge current proof 3 kA (8/20 µs) (F, -G/A) | |
| Rated voltage | | | |
| FRBmM, FRBm6 | U_n | 240 V AC, 50 Hz | |
| FRBmM 120 V | U_n | 120 V AC, 50/60 Hz | |
| Rated tripping current | | | |
| FRBmM, FRBm6 | $I_{\Delta n}$ | 30, 100, 300 mA | |
| FRBmM 120 V | $I_{\Delta n}$ | 30 mA | |
| Rated non-tripping current | $I_{\Delta no}$ | 0.5 $I_{\Delta n}$ | |
| Sensitivity | | AC and pulsating DC, Type F according to IEC/EN 62423 | |
| Selectivity class | | 3 | |
| Rated short circuit capacity | | | |
| FRBmM | I_{cn} | 10 kA | |
| FRBm6 | I_{cn} | 6 kA | |
| Rated current | | | |
| FRBmM, FRBm6 | | 6 - 40 A | |
| FRBmM 120 V | | 6 - 25 A | |
| Rated impulse withstand voltage | U_{imp} | 4 kV (1.2/50µs) | |
| Characteristic | | B, C | |
| Maximum back-up fuse (short circuit protection) | | 100 A gL (>10 kA) | |
| Endurance | | | |
| electrical components | | ≥ 4,000 operating cycles | |
| mechanical components | | ≥ 10,000 operating cycles | |
| Mechanical | | | |
| Frame size | | 45 mm | |
| Device height | | 80 mm | |
| Device width | | 35 mm (2MU) | |
| Mounting | | 3-position DIN rail clip, permits removal from existing busbar system | |
| Degree of protection switch | | IP20 | |
| Degree of protection, built-in | | IP40 | |
| Upper and lower terminals | | open mouthed/lift terminals | |
| Terminal protection | | finger and hand touch safe, DGUV VS3, EN 50274 | |
| Terminal capacity | | 1 - 25 mm ² | |
| Terminal torque | | 2 - 2.4 Nm | |
| Busbar thickness | | 0.8 - 2 mm | |
| Operation temperature | | -25°C to +40°C | |
| Storage- and transport temperature | | -35°C to +60°C | |
| Resistance to climatic conditions | | acc. to IEC 60068-2-30 (25..55°C / 90..95% RH) | |

Short-circuit Selectivity FRBmM 2-poles

In case of a short-circuit, selectivity is provided up to the specified selective current values I_s (kA) applicable between the FRBmM RCD/MCB circuit breakers and the up-stream protective devices.

When a short-circuit occurs, this means that with I_{KS} current values below I_s only the MCB will trip. However, in case of short-circuit currents beyond these values both protective devices will trip.

FRBmM 2-poles and NZM1/NZM2

Short circuit currents in kA, rated currents of fuses in A.

Overload and short-circuit release unit NZM at max. value

Description

- High-quality residual current device / miniature circuit breaker combination, line voltage-independent
- Contact position indicator red - green
- Fault current tripping indicator white - blue
- Guide for secure terminal connection
- 3-position DIN rail clip, permits removal from existing busbar system
- Comprehensive range of accessories suitable for subsequent installation
- Wide variety of rated tripping currents
- Rated currents up to 32 A
- Tripping characteristics B, C, D
- Rated breaking capacity acc. to IEC/EN 61009 10kA
- Rated breaking capacity acc. to IEC/EN 60947-2 15kA
- Classified for the use in rail rolling stock

SG02013

Specifications | Combined RCD/MCB Devices FRBmM, 3-poles

Description

- Combined RCD/MCB device
- Line voltage-independent tripping
- Compatible with standard busbar
- Twin-purpose terminal (lift/open-mouthed) above and below
- Busbar positioning optionally above or below
- Free terminal space despite installed busbar
- Guide for secure terminal connection
- Contact position indicator red - green
- Fault current tripping indicator white - blue
- Comprehensive range of accessories suitable for subsequent installation
- The test key "T" must be pressed every 6 months. The system operator must be informed of this obligation and his responsibility in a way that can be proven. Under special conditions (e.g. damply and/or dusty environments, environments with polluting and/or corroding conditions, environments with large temperature fluctuations, installations with a risk of overvoltages due to switching of equipment and/or atmospheric discharges, portable equipment ...), it's recommended to test in monthly intervals.
- Pressing the test key "T" serves the only purpose of function testing the residual current device (RCD). This test does not make earthing resistance measurement (R_e), or proper checking of the earth conductor condition redundant, which must be performed separately.
- **Type -A:** Protects against special forms of residual pulsating DC which have not been smoothed.
- **Type -G:** High reliability against unwanted tripping. Suitable any circuit where personal injury or damage to property may occur in case of unwanted tripping.

Accessories:

| | | |
|--|------------|----------------|
| Auxiliary switch for subsequent installation | ZP-IHK | 286052 |
| | ZP-WHK | 286053 |
| Tripping signal switch for subsequent installation | ZP-NHK | 248437 |
| Shunt trip release | ZP-ASA/.. | 248438, 248439 |
| Terminal cover 4-poles | Z-TC/SD-4P | 178101 |

Short-circuit Selectivity FRBmM, 3-poles

In case of a short-circuit, selectivity is provided up to the specified selective current values I_s (kA) applicable between the FRBmM RCD/MCB circuit breakers and the up-stream protective devices.

When a short-circuit occurs, this means that with I_{KS} current values below I_s only the MCB will trip. However, in case of short-circuit currents beyond these values both protective devices will trip.

FRBmM, 3-poles, Characteristic B and NZM 1/2

Selectivity-limit current I_s [kA] for selectivity between FRBmM-.../B and NZM (overload and short-circuit release unit NZM at max. value).

| FRBmM-B I_n [A] | NZM...1-A... $I_{cu} = 25(36)(50)(100)$ kA bei $U_e = 400/415$ V | | | | | |

SG02213

Description

- High-quality residual current device / miniature circuit breaker combination, line voltage-independent
- Contact position indicator red - green
- Fault current tripping indicator white - blue
- Guide for secure terminal connection
- 3-position DIN rail clip, permits removal from existing busbar system
- Comprehensive range of accessories suitable for subsequent installation
- Wide variety of rated tripping currents
- Rated currents up to 32 A
- Tripping characteristics B, C, D
- Rated breaking capacity 6 kA or 4.5 kA acc. to IEC/EN 61009 & IEC/EN 60947
- Classified for the use in rail rolling stock

Specifications | Combined RCD/MCB Devices FRBm6, FRBm4, 3+N-poles

Description

- Combined RCD/MCB device
 - Line voltage-independent tripping
 - Compatible with standard busbar
 - Twin-purpose terminal (lift/open-mouthed) above and below
 - Busbar positioning optionally above or below
 - Free terminal space despite installed busbar
 - Guide for secure terminal connection
 - Contact position indicator red - green
 - Fault current tripping indicator white - blue
 - Comprehensive range of accessories suitable for subsequent installation
 - The test key "T" must be pressed every 6 months. The system operator must be informed of this obligation and his responsibility in a way that can be proven. Under special conditions (e.g. damply and/or dusty environments, environments with polluting and/or corroding conditions, environments with large temperature fluctuations, installations with a risk of overvoltages due to switching of equipment and/or atmospheric discharges, portable equipment ...), it's recommended to test in monthly intervals.
 - Pressing the test key "T" serves the only purpose of function testing the residual current device (RCD). This test does not make earthing resistance measurement (R_e), or proper checking of the earth conductor condition redundant, which must be performed separately.
- **Type -A:** Protects against special forms of residual pulsating DC which have not been smoothed.

Accessories:

| | | |
|--|------------|----------------|
| Auxiliary switch for subsequent installation | ZP-IHK | 286052 |
| | ZP-WHK | 286053 |
| Tripping signal switch for subsequent installation | ZP-NHK | 248437 |
| Shunt trip release | ZP-ASA/.. | 248438, 248439 |
| Terminal cover 4-poles | Z-TC/SD-4P | 178101 |

Back-up Protection FRBm4/FRBm6

The up-stream protective devices will protect the down-stream FRBm4/FRBm6 up to the short-circuit current specified.

FRBm and NZM1

Short circuit currents in kA.

| FRBm4/ FRBm6 | NZMB1(C1)(N1)(H1)-A... | | |

1.154 Add-on Residual Current Protection

xEffect

Add-on Residual Current Protection Unit FBSmV, Type AC and A

SG03613

Description

- Combining this device with a top-quality miniature circuit breaker of Type FAZ (except FAZ-PN) will form a top-quality RCBO unit (combined RCD/MCB device)
- Draw-out connection bar locked in installation position
- For subsequent mounting onto 2-, 3-, 3+N- and 4-pole miniature circuit breakers FAZ
- Rated current 40 and 63 A
- 120 V Types
- Classified for the use in rail rolling stock

Specifications | Add-on Residual Current Protection Unit FBSmV

Description

- Add-on residual current unit
- Line voltage-independent tripping
- By combining this device with a top-quality miniature circuit breaker type FAZ (except FAZ-PN) a top-quality RCBO unit (combined RCD/MCB device) is formed
- Rated current 40 and 63 A
- Permits combinations with a variety of characteristics thanks to the different rated currents and characteristics of the FAZ-miniature circuit breakers which can be connected
- Comprehensive range of accessories suitable for subsequent installation onto FAZ
- The test key "T" must be pressed every 6 months. The system operator must be informed of this obligation and his responsibility in a way that can be proven. Under special conditions (e.g. damply and/or dusty environments, environments with polluting and/or corroding conditions, environments with large temperature fluctuations, installations with a risk of overvoltages due to switching of equipment and/or atmospheric discharges, portable equipment ...), it's recommended to test in monthly intervals.
- Pressing the test key "T" serves the only purpose of function testing the residual current device (RCD). This test does not make earthing resistance measurement (R_e), or proper checking of the earth conductor condition redundant, which must be performed separately.
- **Type -A:** Protects against special forms of residual pulsating DC which have not been smoothed.
- **Type -G:** High reliability against unwanted tripping. Suitable for any circuit where personal injury or damage to property may occur in case of unwanted tripping.
- **Type -S:** Selective residual current device sensitive to AC, Type -S. Suitable for systems with surge arresters downstream of the RCD.
- **Type -S/A:** Additionally protects against special forms of residual pulsating DC which have not been smoothed.

Accessories:

| | |
|---------------------------------------|----------|
| Cover cap for draw-out connection bar | included |
| Slotted one-way cheese head screw | included |

Accessories (on FAZ):

Description

- By combining this device with a top-quality miniature circuit breaker of type AZ a top-quality RCBO unit (combined RCD/MCB device) is formed.
- Add-on residual current unit (screw connection) for 80 or 125 A (2-pole and 4-pole)
- High flexibility and ease of installation thanks to variable wiring
- Free selection of main power supply
- Auxiliary switch 1 make contact included as standard in all FBHmV versions
- Permits combinations with a variety of characteristics thanks to the different rated currents and characteristics of the miniature circuit breakers AZ which can be connected
- For commercial and industry applications
- For subsequent mounting onto 2, 3, 3+N and 4-pole-miniature circuit breakers AZ
- The screw connection to the AZ-device can be unscrewed at any time. Consequently, in case of modifications of the systems to be protected, the installation can be adapted to new requirements at any time.
- Classified for the use in rail rolling stock

Specifications | Add-on Residual Current Protection Unit FBHmV

Description

- By combination with miniature circuit breaker AZ => RCBO-Unit (MCCB)
- Add-on residual current unit (screw connection) for 80 or 125 A (2-pole and 4-pole)
- High flexibility and ease of installation thanks to variable wiring (400 mm flexible connection wires 2p = 2 units, 4p = 4 units included in the set)
- Free selection of main power supply
- Auxiliary switch 1 NO included as standard in all FBHmV versions
- Permits combinations with a variety of characteristics thanks to the different rated currents and characteristics of the miniature circuit breakers AZ which can be connected
- For trade and industry applications
- For subsequent mounting onto 2, 3, 3+N and 4-pole-miniature circuit breakers AZ
- Toggle (serves as switch position- and tripping indicator)
- The screw connection to the AZ-device can be unscrewed at any time. Consequently, in case of modifications of the systems to be protected, the installation can be adapted to new requirements at any time.
- The test key "T" must be pressed every 6 months. The system operator must be informed of this obligation and his responsibility in a way that can be proven. Under special conditions (e.g. damply and/or dusty environments, environments with polluting and/or corroding conditions, environments with large temperature fluctuations, installations with a risk of overvoltages due to switching of equipment and/or atmospheric discharges, portable equipment ...), it's recommended to test in monthly intervals.
- Pressing the test key "T" serves the only purpose of function testing the residual current device (RCD). This test does not make earthing resistance measurement (R_E), or proper checking of the earth conductor condition redundant, which must be performed separately.

Accessories:

Flexible connection wires (connection to AZ) are included in the standard set:

| | | |

Description

- The highest standards of safety and reliability at 24 V DC circuits
- Direct connection of up to 3 loads
- Simple and quick installation with push-in terminals and busbars
- Active current limitation
- Sequence control - easy linking of channels
- Modular system
- Individual and collective fault messages
- ON-OFF remote reset function
- Subsequent switching of system in fault situation
- PLC compatible conform to IEC/EN 61131-2
- Local sliding switch
- UL approval
- Classified for the use in rail rolling stock

| Service life when used as a relay | see Time / Current Table | | |
| Mechanical | | | |
| Number of Channels | 1 | | |
| Width | 17.5 (1MU) | | |
| Height | 92.5 mm | | |
| Depth | 119.2 mm | | |
| Type of terminals | Push-In terminals | | |
| Line terminals (optional) | 3x LINE (+) and 3x GND (-) | | |
| Load terminals | 3x LOAD (+) and 3x GND (-) | | |
| Terminal capacity Input/Output terminals | 2.5 mm ² (flexible with wire end sleeve) 4 mm ² (rigid) | | |
| Terminal capacity Communication plug | 1 mm ² (flexible with wire end sleeve) 1.5 mm ² (rigid) | | |
| Communication plug | 2x control output (internal linked) 2x control input (internal linked) 1x GND | | |
| Busbar | LINE (+) and GND (-); max. 80 A in various length up to 1 m | | |
| Montage | Snapping on DIN rail TH35 (EN 60715) | | |
| Status LED | Bi-colour; Green = OK; Red = tripped; OFF = channel not in use | | |
| Sliding switch | ON/OFF/Reset | | |
| Control output | Tripped; about Communication plug (according to IEC 61131-2), Class: 0.1 A; Typ1/Typ2 and Typ3 Digital Inputs Max. 30 PXS24V Other indication devices up to 0.2 A @ 24 V (EATON RMQ series,...) | | |
| Control input | ON/OFF/Reset; about Communication plug (according to IEC 61131-2) Type1/Type3; Max. 30 PXS24 | | |
| Sequencer | About Communication plug | | |
| Text field | 17,5 x 6 mm | | |
| Degree of protection | IP20 | | |
| Operation temperature | -30 °C to +55 °C | | |
| Storage Temperature | -40 °C to +100 °C | | |

Time / Current Table

| Rated current I_N [A] | Shut-off time [ms] | Active current limiting | Service life when used as a relay $t_{on} = 0.05 \text{ s} / t_{off} = 10 \text{ s}$ |
|----------------------------|-----------------------|-------------------------|---|
| 2 | 470 | $1.25 \times I_N$ | > 10,000,000 |
| 4 | 280 | $1.25 \times I_N$ | > 10,000,000 |
| 6 | 170 | $1.25 \times I_N$ | > 10,000,000 |
| 8 | 110 | $1.25 \times I_N$ | 400,000 |
| 10 | 90 | $1.25 \times I_N$ | 10,000 |
| 13 | 80 | $1.25 \times I_N$ | no usage as relay - only protection |
| 16 | 70 | $1.25 \times I_N$ | no usage as relay - only protection |

Overview of the PXS24 features

| Feature | Economy | Standard |
|--|----------------|-----------------|
| Rated current (fixed, 2, 4, 6, 8, 10, 13, 16 A) | 0-10 A | 0-16 A |
| Active current limiting | x | x |
| Modular system | x | x |
| 3 load connections (+/-) | x | x |
| Push-in terminals | x | x |
| Busbar (+/-) | x | x |
| Local status LED | x | x |
| Local switch (on/off/reset) | x | x |
| Sequencer | | x |
| Digital control outputs (on/off/reset) | | x |
| Digital control inputs (on/off/reset) | | x |

Note for UL applications: The PXS solid state overcurrent protector has been tested in accordance to UL 508 and CSA 22.2 No. 14 for DC general use. Temperature, overload and endurance, dielectric and breakdown of component tests were conducted. Calibration and overloaded operation tests were conducted in accordance with UL 2367.

2.174 Miniature Circuit Breakers

Miniature Circuit Breakers FAZ, FAZ-PN, FAZ-HS

xEffect

SG55812

Description

FAZ

- High-quality miniature circuit breakers for industrial applications and residential applications
- Contact position indicator red - green
- Guide for secure terminal connection
- 3-position DIN rail clip, permits removal from existing busbar system
- Comprehensive range of accessories suitable for subsequent installation
- Rated currents up to 63 A
- Tripping characteristics B, C, D, K, S, Z
- Rated breaking capacity up to 15 kA according to IEC/EN 60947-2
- Classified for the use in rail rolling stock

FAZ-PN

- Tripping characteristic B
- Rated breaking capacity up to 6 kA according to IEC/EN 60898-1
- Module width 1MU (1+N-poles)
- Classified for the use in rail rolling stock

FAZ-HS

- Tripping characteristic B
- Rated breaking capacity up to 10 kA according to IEC/EN 60898-1
- 1- and 2-poles available
- Miniature bircuit breaker with reduced Let-through-energy for control circuits to protect the auxiliary switch contacts from welding.

Short Circuit Selectivity FAZ

In case of short circuit, there is selectivity between the miniature circuit breakers FAZ and the upstream protection devices up to the specified values of the selectivity limiting current I_s [kA] (i. e. in case of short-circuit currents I_{ks} under I_s , only the MCB will trip, in case of short circuit currents above this value both protective devices will respond).

*) basically in accordance with EN 60898-1 D.5.2.b

FAZ towards NH-00 Fuses

Influence of the Line Frequency FAZ

On the Instantaneous Tripping Current I_{MA}

| | Line Frequency f [Hz] | | | | | | |
|--------------------------------------|------------------------------------|-----------|-----------|------------|------------|------------|------------|
| | 16²/₃ | 50 | 60 | 100 | 200 | 300 | 400 |
| $I_{MA}(f)/I_{MA}(50\text{ Hz})$ [%] | 91 | 100 | 101 | 106 | 115 | 134 | 141 |

The use of the products in networks with other frequencies than 50/60 Hz are in the customer's responsibility.

SG56012

Description

FAZ-T

- High-quality miniature circuit breakers for industrial and commercial applications
- Contact position indicator red - green
- Accessories suitable for subsequent installation
- Rated currents up to 40 A
- Tripping characteristics B, C, D
- Rated breaking capacity up to 25 kA according to EN 60947-2
- Classified for the use in rail rolling stock

Technical Data

| | | FAZ-T |
|--|-----------|--|
| Productstandard | | IEC/EN 60947-2, IEC/EN 60898-1 |
| Classified according to | | IEC 61373, EN 45545-2 |
| Current test marks as printed onto the device | | |
| Number of poles | | 1, 1p+N, 2, 3, 3p+N, 4 |
| Mechanical | | |
| Device width | | 17.7 mm (1p), 27 mm (1p+N), 36 mm (2p), 54 mm (3p), 72 mm (3p+N), 72 mm (4p) |
| Frame size | | 45 mm |
| Device height | | 80 mm |
| Device depth | | 60 mm |
| Terminals | | lift terminal |
| Terminal capacity rigid solid/stranded wire | | 1-25 mm ² |
| Terminal screw | | M5 (with slotted screw acc. to EN ISO 4757-Z2, PZ2) |
| Fastening torque of terminal screws | | max. 2.4 Nm |
| Snap on fixing | | tristable (on DIN rail acc. to EN 50022) |
| Finger proof | | acc. to VBG4, ÖVE EN-6 |
| Degree of protection (DIN VDE 0470) | | |
| Surface mounted | | IP20 |
| Built-in behind panel | | IP40 |
| Contact position indicator | | red / green |
| Electrical | | |
| Rated voltage | U_n | 255/440 V AC (Characteristic B, C), 240/415 V AC (Characteristic D) 60 V DC per pole |

Influence of the Line Frequency FAZ-T

On the Instantaneous Tripping Current I_{MA}

| | Line Frequency f [Hz] | | | | | | |
|--------------------------------------|------------------------------------|-----------|-----------|------------|------------|------------|------------|
| | 16²/₃ | 50 | 60 | 100 | 200 | 300 | 400 |
| $I_{MA}(f)/I_{MA}(50\text{ Hz})$ [%] | 91 | 100 | 101 | 106 | 115 | 134 | 141 |

The use of the products in networks with other frequencies than 50/60 Hz are in the customer's responsibility.

Description

FAZ-DC

- High-quality miniature circuit breakers for DC-applications
- Contact position indicator red - green
- Guide for secure terminal connection (not for FAZ-NA)
- 3-position DIN rail clip, permits removal from existing busbar system
- Comprehensive range of accessories suitable for subsequent installation
- Rated currents up to 50 A
- Tripping characteristic C
- Rated breaking capacity 10 kA according to IEC/EN 60947-2
- Up to 250 V DC per pole
- Classified for the use in rail rolling stock

Technical Data

| | | FAZ-DC *) |
|---|-----------|---|
| Productstandard | | IEC/EN 60947-2 |
| Classified according to | | IEC 61373, EN 45545-2 |
| Current test marks as printed onto the device | | |
| Number of poles | | 1, 2 |
| Mechanical | | |
| Device width | | 17.7 mm (1p), 36 mm (2p) |
| Frame size | | 45 mm |
| Device height | | 80 mm |
| Device depth | | 60 mm |
| Terminals | | lift terminal |
| Terminal capacity rigid solid/stranded wire | | 1-25 mm ² |
| Terminal screw | | M5 (with slotted screw acc. to EN ISO 4757-Z2, PZ2) |
| Fastening torque of terminal screws | | max. 2.4 Nm |
| Snap on fixing | | tristable (on DIN rail acc. to EN 50022) |
| Finger proof | | acc. to VBG4, ÖVE EN-6 |
| Degree of protection (DIN VDE 0470) | | |
| Surface mounted | | IP20 |
| Built-in behind panel | | IP40 |
| Contact position indicator | | red / green |
| Electrical | | |
| Rated voltage DC | U_n | 2 A Type: 220V (per pole) 3-50 A Typen: 250V (per pole) |
| Rated current | I_n | Type C: 2, 3, 4, 6, 8, 10, 13, 16, 20, 25, 32, 40, 50 A |
| Rated insulation voltage | U_i | 440 V AC |
| Rated impulse withstand voltage | U_{imp} | 4 kV (1.2/50) µsec |
| Tripping characteristic | | |
| Conventional non-tripping current | I_{nt} | $I_{nt} = 1,13 I_n$ |
| Conventional tripping current | I_t | $I_t = 1,45 I_n$ |
| Reference temperature | | 40 °C |
| Temperature factor | | 0.4%/K |
| Instantaneous tripping current | I_{mt} | Type B: $4 I_n < I_{mt} = 7 I_n$; $t(I_{mt}) < 0.1$ sec Type C: $7 I_n < I_{mt} = 15 I_n$; $t(I_{mt}) < 0.1$ sec |
| Rated short-circuit breaking capacity | I_{cn} | 10 kA |
| Selectivity class | | 3 |
| Number of electrical operations | | > 4.000 |
| Number of mechanical operations | | > 20.000 |
| Climatic conditions | | acc. to IEC 60068-2-30 (25..55°C / 90..95% RH) |
| Operating temperature range | | -40°C up to +75°C |
| Storage- and transport temperature | | -40°C up to +75°C |

*) not for PV string protection!

Tripping Characteristics FAZ-...-DC

Characteristics C - IEC/EN 60947-2

Maximum Let-Through Energy FAZ-...-DC

Type C

SG56912

Description

FAZ-NA, FAZ-RT

- According to UL 489, CSA C22.2 No. 5 and also IEC 60947-2 standard
- For Applications, which are permitted for UL 1077 or CSA C22.2 No. 235
- Auxiliary switch and voltage trips suitable for subsequent installation
- Serie with removable terminal screws (Type FAZ-...-RT), for use with ring cable lug
- Contact position indicator red - green
- Easy mounting at DIN-rail
- Classified for the use in rail rolling stock

Miniature Circuit Breakers FAZ-...-NA, -RT

Accessories:

| | | |
|---|-----------------------|--------|
| Auxiliary switch for subsequent installation | Z-IHK-NA | 113895 |
| Tripping signal contact for subsequent installation | Z-NHK | 248434 |
| Shunt trip release | FAZ-XAA-NA12-110V AC | 102037 |
| | FAZ-XAA-NA110-415V AC | 102036 |
| Switching interlock | Z-IS/SPE-1TE | 274418 |

Technical Data IEC/EN

| | | FAZ-...-NA, -RT |
|---|-----------|--|
| Productstandard | | IEC/EN 60947-2 |
| Classified according to | | IEC 61373, EN 45545-2 |
| Current test marks as printed onto the device | | |
| Number of poles | | 1, 2, 3, 4 |
| Mechanical | | |
| Device width | | 17.7 mm (1-pole), 35.4 mm (2-poles), 53.1 mm (3-poles), 70.8 mm (4-poles) |
| Frame size | | 45 mm |
| Device height | | 105 mm |
| Device depth | | 60 mm |
| Terminals | | lift terminal / ring-tongue |
| Terminal capacity rigid solid/stranded wire | | 1-25 mm ² |
| Terminal screw | | M5 (with slotted screw Pozidriv PZ2) |
| Fastening torque of terminal screws | | max. 2.4 Nm |
| Degree of protection (DIN VDE 0470) | | |
| Surface mounted | | IP20 |
| Built-in behind panel | | IP40 |
| Contact position indicator | | red / green |
| Electrical | | |
| Rated voltage | U_n | Only characteristic B, C (up to 40 A): 254/440 V AC For characteristic B, C (50 and 63 A) and characteristic D: 240/415 V AC |
| Rated current | I_n | 0.5, 1, 1.5, 2, 3, 4, 5, 6, 7, 8, 10, 13, 15, 16, 20, 25, 30, 32, 35, 40, 50, 63 A |
| Rated insulation voltage | U_i | 440 V AC |
| Rated impulse withstand voltage | U_{imp} | 4 kV (1.2/50) μ sec |
| Tripping characteristic | | |
| Conventional non-tripping current | | $I_{nt} = 1.05 I_n$ |
| Conventional tripping current | | $I_t = 1.30 I_n$ |
| Reference temperature | | 30 °C |
| Temperature factor | | 0.5%/K |
| Instantaneous tripping current | I_{mt} | Type B: $3 I_n < I_{mt} = 5 I_n \cdot t (I_{mt}) < 0.1$ sec Type C: $5 I_n < I_{mt} = 10 I_n \cdot t (I_{mt}) < 0.1$ sec Type D: $10 I_n < I_{mt} = 20 I_n \cdot t (I_{mt}) < 0.1$ sec |
| Rated short-circuit breaking capacity | I_{cu} | 15 kA |
| Service short circuit capacity | I_{cs} | 7.5 kA |
| Selectivity class | | 3 (acc. to EN 60898) |
| Number of electrical operations | | > 1,500 |
| Number of mechanical operations | | > 10,000 |
| Climatic conditions | | acc. to IEC 60068-2-30 (25..55°C / 90..95% RH) |
| Operating temperature range | | -40°C up to +75°C |
| Storage- and transport temperature | | -40°C up to +75°C |
| Operating utility frequency | | 50/60 Hz |

SG56612

Description

FAZ-NA-DC

- High-quality miniature circuit breakers for DC-applications
- Contact position indicator red - green
- Guide for secure terminal connection (not for FAZ-NA)
- 3-position DIN rail clip, permits removal from existing busbar system
- Comprehensive range of accessories suitable for subsequent installation
- Rated currents up to 40 A
- Tripping characteristic C
- Rated breaking capacity 10 kA according to IEC/EN 60947-2
- Up to 125 V DC per pole
- Classified for the use in rail rolling stock

Technical Data

| | | FAZ-...-NA-DC |
|---|-----------|--|
| Productstandard | | UL 489, CSA C22.2 No. 5-02 |
| Classified according to | | IEC 61373, EN 45545-2 |
| Current test marks as printed onto the device | | |
| Number of poles | | 1, 2 |
| Mechanical | | |
| Device width | | 1 pole = 0.697 inch, 2 poles = 1.394 inch |
| Frame size | | 1.772 inch |
| Device height | | 4.134 inch |
| Device depth | | 2.362 inch |
| Terminals | | lift terminal / ring-tongue |
| Terminal capacity rigid solid/stranded wire | | 1 Wire: #18-6 AWG (Cu only) 2 Wires: #18-10 AWG (Cu only) |
| Terminal screw | | M5 (with slotted screw Pozidriv PZ2) |
| Fastening torque of terminal screws | | #18-12 AWG: 2.4 Nm (21 lb-in) #10-8 AWG: 2.8 Nm (25 lb-in) #6 AWG: 4 Nm (36 lb-in) |
| Snap on fixing | | tristable (on DIN Rail according to IEC/EN 60715) |
| Finger proof | | acc. to VBG4, ÖVE EN-6 |
| Contact position indicator | | red / green |
| Electrical | | |
| Rated voltage | U_n | 125 V DC (1p) 250 V DC (2p) |
| Rated current | I_n | 2, 3, 4, 5, 6, 7, 8, 10, 13, 15, 16, 20, 25, 30, 32, 35, 40 A |
| Rated impulse withstand voltage | U_{imp} | 4 kV (1.2/50) μ sec |
| Tripping characteristic | | |
| Conventional non-tripping current | | $I_{nt} = 1,00 I_n$ |
| Conventional tripping current | | $I_t = 1.35 I_n$ |
| Reference temperature | | 25 °C |
| Temperature factor | | 0.5%/K |
| Instantaneous tripping current | I_{mt} | $7 I_n < I_{mt} = 15 I_n \cdot t (I_{mt}) < 0.1 \text{ sec}$ |
| Current interrupting rating | | 10 kA |
| Number of electrical operations | | 6,000 |
| Number of mechanical operations | | 10,000 |
| Climatic conditions | | acc. to IEC 60068-2-30 (25..55°C / 90..95% RH) |
| Operating temperature range | | -25°C up to +55°C |

Tripping Characteristics FAZ-...-NA-DC

Characteristics C - UL 489

SG56612

Description

FAZ-...-RT-DC

- According to IEC 60947-2 standard
- Auxiliary switch and voltage trips suitable for subsequent installation
- With removable terminal screws for use with ring cable lug
- Contact position indicator red - green
- Easy mounting at DIN-rail
- Classified for the use in rail rolling stock

Technical Data

| | | FAZ-...-RT-DC |
|---|-----------|---|
| Productstandard | | IEC/EN 60947-2*) |
| Classified according to | | IEC 61373, EN 45545-2 |
| Current test marks as printed onto the device | | |
| Number of poles | | 1, 2 |
| Mechanical | | |
| Device width | | 1 pole = 0.697 inch, 2 poles = 1.394 inch |
| Frame size | | 1.772 inch |
| Device height | | 4.134 inch |
| Device depth | | 2.362 inch |
| Terminals | | lift terminal / ring-tongue |
| Terminal capacity rigid solid/stranded wire | | 1-25 mm ² |
| Terminal screw | | M5 (with slotted screw Pozidriv PZ2) |
| Fastening torque of terminal screws | | max. 2.4 Nm |
| Snap on fixing | | tristable (on DIN Rail according to IEC/EN 60715) |
| Finger proof | | acc. to VBG4, ÖVE EN-6 |
| Contact position indicator | | red / green |
| Electrical | | |
| Rated voltage | U_n | 2 A Type: 220 V (per poles) 3-50 A Types: 250 V (per poles) |
| Rated current | I_n | 2, 3, 4, 5, 6, 7, 8, 10, 13, 15, 16, 20, 25, 30, 32, 35, 40 A |
| Rated impulse withstand voltage | U_{imp} | 4 kV (1.2/50) μ sec |
| Tripping characteristic | | |
| Conventional non-tripping current | | $I_{nt} = 1.13 I_n$ |
| Conventional tripping current | | $I_t = 1.45 I_n$ |
| Reference temperature | | 30 °C |
| Temperature factor | | 0.5%/K |
| Instantaneous tripping current | I_{mt} | Type B: $4 I_n < I_{mt} = 7 I_n$; $t(I_{mt}) < 0.1$ sec Type C: $7 I_n < I_{mt} = 15 I_n$; $t(I_{mt}) < 0.1$ sec |
| Current interrupting rating | | 10 kA |
| Number of electrical operations | | > 4,000 |
| Number of mechanical operations | | > 20,000 |
| Climatic conditions | | acc. to IEC 60068-2-30 (25..55°C / 90..95% RH) |
| Operating temperature range | | -40°C up to +75°C |
| Storage- and transport temperature | | -40°C up to +75°C |

*) not for PV string protection!

Connection diagram

Dimensions (mm) FAZ-...-RT-DC

Connection of ring cable lugs (only FAZ...RT)

Connection examples FAZ-...-RT-DC

Connection example at 250V=, 1-pole

Connection example at 500V=, 2-poles

Only if the fault case 'Electrically conductive connection between line side and load side' can be definitely excluded.

Tripping Characteristics FAZ-...-RT-DC

Characteristics C - IEC/EN 60947-2

Maximum Let-Through Energy FAZ-...-RT-DC

Type C

SG08911

Description

- High-quality miniature circuit breakers for industrial applications and residential applications
- Contact position indicator red - green
- Guide for secure terminal connection
- 3-position DIN rail clip, permits removal from existing busbar system
- Comprehensive range of accessories suitable for subsequent installation
- Rated currents up to 63 A
- Tripping characteristics B, C, D

Influence of the Line Frequency FAZ

On the Instantaneous Tripping Current I_{MA}

| | Line Frequency f [Hz] | | | | | | |
|--------------------------------------|------------------------------------|-----------|-----------|------------|------------|------------|------------|
| | 16²/₃ | 50 | 60 | 100 | 200 | 300 | 400 |
| $I_{MA}(f)/I_{MA}(50\text{ Hz})$ [%] | 91 | 100 | 101 | 106 | 115 | 134 | 141 |

The use of the products in networks with other frequencies than 50/60 Hz are in the customer's responsibility.

Load Capacity of Series Connected Miniature Circuit Breakers

SG51412

Description

- High-quality miniature circuit breakers for industrial and commercial applications
- Contact position indicator red - green
- Accessories suitable for subsequent installation
- Rated currents up to 125 A
- Tripping characteristics B, C, D
- Rated breaking capacity up to 25 kA according to EN 60947-2
- Classified for the use in rail rolling stock

Type C

Type D

Short Circuit Selectivity AZ

In case of short circuit, there is selectivity between the miniature circuit breakers AZ and the upstream protection devices up to the specified values of the selectivity limit current I_s [kA] (i. e. in case of short-circuit currents I_{ks} under I_s , only the MCB will trip, in case of short circuit currents above this value both protective devices will respond).

sg09615

Description

- Photovoltaic - Switch-disconnectors
- Acc .to EN 60947-3 DC-PV1 or DC-PV2 resp.
- Very compact
- Improved reliability due to independent manual operation
- Stable performance at any load current
- Polarity independent
- Only one path per pole => lower power loss

2.300 Photovoltaic - DC-Disconnection

xEffect

DC Switch-Disconnecter PV-DIS 2-poles

SG10911

Description

- Load circuit breaker with isolating function
- Highly wear resistant contacts
- Quick make
- Terminal capacity 50 mm²
- Compatible busbars
- 1-, 2-, 3-, 4-pole
- Classified for the use in rail rolling stock

Switching interlock IS/SPE-1TE

- Without lock
- Also suitable for PFIM, CF16, PKNM, CKN6

Terminal Cover Caps Z-IS/AK-1TE

- Can be sealed with leads
- Modular design, width 1 MU

Description

- Load circuit breaker with isolating function
- Design according to IEC/EN 60947-3
- Highly wear resistant contacts
- Quick make, black toggle
- Terminal capacity 50 mm²
- Compatible busbars with switchgear series Xpole by use of the mouth terminal in combination with standard fork busbar

Auxiliary SWD Module for MCBs, RCCBs and RCBOs

SG00114, sg01515

| Description | Type Designation | Article No. | Units per package |
|---------------|------------------|-------------|-------------------|
| SWD Module | MCB-HK-SWD | 177175 | 1 |
| Spare End Cap | SWD4-OS | 178150 | 10 |

Description Auxiliary SWD Module

- Auxiliary module for the connection of an MCB, RCCB or RCBO to the SWD line
- Connection to an RCCB on the left side and to an MCB or RCBO on the right side
- Communication of on/off and trip status, trip indicator
- SWD connection on the top and bottom possible
- Integrated SWD-bus LED

Technical Data

| | MCB-HK-SWD |
|-----------------------|-----------------------------------|
| Pollution degree | 2 |
| Degree of protection | IP20 |
| Power supply | via SWD line |
| Operation temperature | -25 up to +40°C |
| Dimensions | W x H x D = 17.5 x 88.3 x 77.3 mm |

Combination with the following Types

RCCB

Description Auxiliary Switch Z-HK, Z-AHK; Tripping Signal Switch Z-NHK

- Design according to IEC/EN 60947-5-1, IEC/EN 62019
- Can be mounted subsequently (screws) onto FRCmM, FRCdM
- The specified minimum voltages are per contact.
Take into account particularly in case of series connection!
- **Z-AHK, Z-NHK:** Contact function with relative movement (selfcleaning contacts)
- Contact material and design particularly suitable for extra low voltage
- **Z-NHK:** The function of one of the two change-over contacts can be switched from "auxiliary switch" to "tripping signal switch"
- Tripping signal contact transmits message of electric tripping, not mechanical switch-off
- Test key for contact function "electrical tripping"

| Design: for snapping | | | | |
|  | MCB, RCBO / 1NO+1NC | ZP-IHK | 286052 | 4/120 |
|  | MCB, RCBO / 1CO | ZP-WHK | 286053 | 4/120 |
|  | MCB, RCBO / 2CO | ZP-NHK | 248437 | 4/120 |

Description Auxiliary Switch ZP-IHK, ZP-WHK; Tripping Signal Switch ZP-NHK

- Design according to IEC/EN 62019
- No screws required. Can be snapped onto FAZ and FRBmM-1N subsequently
- **ZP-IHK, ZP-WHK:** Can be snapped on additionally 1 time onto itself
- The specified minimum voltages are per contact. Take into account particularly in case of series connection!
- Contact material and design particularly suitable for extra low voltage.
- Contact function with relative movement (self-cleaning contacts)e)
- **ZP-NHK:** The function of one of the two change-over contacts can be switched from "auxiliary switch" to „tripping signal switch“
- Tripping signal contact transmits message of electric tripping, not mechanical switch-off
- **ZP-NHK:** The "Service button" is used to check whether or not the auxiliary switch is correctly wired in the tripping-signal-switch position. Activating the "service button" will mechanically simulate an electrical switch-off, so the mechanism for the electrical switchoff will disengage and can be checked. The main switchgear (MCB or combined MCB/RCD) connected to the ZP-NHK auxiliary switch does not need to trip as well during an inspection through the service button.

Description RCCB Tripping Module Z-FAM, Z-KAM

- For remote switch-off of RCCBs, standard and electronic combined RCD/MCB devices
- Remote switch-off by one or several parallel potential-free contacts, e.g. pushbutton max. rated current 3 A at 250 V, take into account maximum pushbutton voltage
- Remote tripping test by means of remote testing module Z-FW
- Can be mounted subsequently, to be wired according to connection diagram with the respective terminals of the RCCB
- No undesired voltage rise in the consumer system during remote switch-off thanks to integrated breaker contact K1-K2

| 2 | 10 | PLSM-B4/2-HS | 247222 | 1 / 60 |

SG54312

Description MCB for Auxiliary Switch Circuits PLSM-B4/-HS

- Design according to EN 60898-1, 4 A, Characteristic B
- Very low let-through energy in order to prevent contact welding in auxiliary switches of any and all switchgear, as well as thermostats control devices, timers, etc.
- Busbar connection to PFIM, PKN, ...

Technical Data

| PLSM-B4/-HS | |
|--------------------------------------|---|
| Electrical | |
| Number of poles | 1-, 1+N-, 2pole |
| Rated voltage | 230/400 V |
| Frequency | 50/60 Hz |
| Rated current | 4 A |
| Rated breaking capacity | 10 kA |
| Mechanical | |
| Frame size | 45 mm |
| Device height | 80 mm |
| Device width | 17.5 mm (1MU) / 26.3 mm / 35 mm (2MU) |
| Mounting | quick fastening with 2 lock-in positions on DIN rail IEC/EN 60715 |
| Degree of protection, built-in | IP40 |
| Terminal protection | finger and hand touch safe according to DGUV VS3, EN 50274 |
| Terminals | Twin-purpose terminals |
| Terminal capacity | 1-25 mm ² |
| Terminal screws | M3 (Pozidrive) |
| Tightening torque of terminal screws | 0.8-1.0 Nm |
| Busbar thickness | 0.8 - 2 mm |

Connection diagram

e.g. 1pole

Dimensions (mm)

Let-through Energy PLSM-B4-HS, Characteristic B, 1pole

Practical Hint

Even auxiliary switches must be protected against overload and short circuit by means of suitable back-up fuses according to manufacturer specification. According to IEC 60947-5 a maximum back-up fuse is specified for conditional short circuit prevention up to 1,000 A. Therefore, connection of the auxiliary switch to the nearest MCB is not permitted. Danger of contact welding! The MCB for auxiliary switch circuits ...-HS offers a simple solution.

Auxiliary Switch Z-IHK-NA

| | | | |
|-----|----------|--------|---|
| 250 | Z-IHK-NA | 113895 | 1 |
|-----|----------|--------|---|

Description Auxiliary Switch Z-IHK-NA

- Design according to IEC/EN 60947-5-1, IEC/EN 62019
- Field installable
- The specified minimum voltages are per contact—take into account particularly in case of series connection
- Self-cleaning contacts
- Contact material and design particularly suitable for extra low voltage
- Tripping signal contact transmits message of electric tripping, not mechanical switch-off
- Test key for contact function “electrical tripping”
- Will allow for > 480Y/277 VAC rating

Z-FW-MO

Connection Example

Description Remote Testing Module Z-FW (for Z-FW-LP)

- External testing module with testing resistor for RCDs
- Proper „external“ test key function according to the applicable rules thanks to design adapted to the rated tripping current
- For remote testing with remote control and automatic switching device Z-FW-LP
- No undesired voltage rise in the consumer system during remote switch-off thanks to integrated breaker contact K1-K2
- Can also be used as a remote tripping module for RCDs

Description

Busbar System xEffect is the modular design system for busbars. xEffect busbars are available as yard goods with 1, 2 or 3 poles. Now, there is a special feature: each bar can easily be extended by one-pole bar as you like. The additional pole can be added completely without tools by easy clamping technique. The lugs or forks in the xEffect bars - available in 10 and 16 mm² and all common distances - can be broken out at a predetermined breaking point. There is actually no more flexibility available.

Busbar System xEffect saves time and material

The yard good can be cut with a saw of course. However, there is no need neither for deburring nor for cutting the conductor. Just cut to the required dimension and close with the fitting end cap -ready! The end caps have also breakable edges, which enable further connecting of the Busbar System xEffect. By overlapping assembly, doubling the cross section can be achieved.

Busbar System xEffect in use

Busbar System xEffect is especially well suited for solving flexible busbar applications rack-mounted models in series. Fork-pin combinations for 1+N-applications can be realized by individual combinations - for this also the one-pole version with blue isolation is available besides the one with grey isolation. Even different cross sections can be combined in this case.

Accessories, such as feeder terminals and self adhesive phase marking labels will complete the comfortable total package. Existing contact prevention caps can be used.

Busbar System xEffect at a glance:

- Yard goods can be cut
- No cutting back of copper required
- No deburring required
- Almost no waste during cutting
- End caps available with 1- to 4-poles, end caps can be broken out for further extensions
- 4-pole end cap molded in pairs (left and right)
- Overlapping rail extension possible

- Rails can be extended on demand by 1-pole rails (plug-in technology)
- All step distances
- 10 and 16 mm²
- Fork and stud
- Lugs can be broken out at any predetermined breaking point
- Self adhesive phase indication labels available
- Contact preventing caps (ZV-BS-G) can be used
- Simple, flexible handling
- All assembly requirements can be covered by the Busbar System xEffect
- Low storage space requirements due to modular system
- Less time consuming (no deburring, no cutting back)
- Individual and self configurable
- Fork-pin combination for 1+N application possible, feeding through rail (terminal clamp) not possible.
- Protected technology

Approvals and shipping classifications for world markets

In their basic version, the Moeller-branded Eaton devices are approved for use throughout the world, including the USA and Canada. As such, they can be used without restriction as devices for world markets. The standard versions of some devices, such as circuit breakers, can be used worldwide except in the USA and Canada. For export to North America, numerous devices are available in special UL- and CSA-approved versions.

For currently available approvals, see our website:
<http://www.eaton.eu/approvals>

Eaton's Moeller-branded low-voltage switchgear and switchgear assemblies conform to national and international specifications, making it possible to construct control systems that will conform to the national and international specifications of any country in the world.

This, of course, means that due consideration must be given to the national standards of the respective country, such as those concerning installation, operation, installation materials and methods, as well as any pertaining to circumstances such as severe environmental conditions. The device rating data given in this catalog for 220 – 240 V, 380 – 440 V, 500 V, 600 V, and 690 V covers virtually all existing three-phase systems worldwide.

Deviating requirements for the USA and Canada are given in detail in each chapter of this catalog. Read also the detailed description "Switchgear for North America" from Page 22/13. For the worldwide use of switchgear, special installation standards and approval requirements must also be observed in addition to the widely differing system conditions:

Where screw fuses are used in a control system, some European countries – such as Denmark, Finland, the Netherlands, Norway and Sweden – require gage screws. In this case, "FORM P" fuse bases must be used. Switzerland no longer requires the use of gage screws, but they are still often requested by customers. The majority of countries permit the import of switchgear assemblies and devices on the manufacturer's undertaking that they have been constructed in accordance with the pertinent specifications. In some countries, such as the USA and Canada, however, there is a legal obligation to obtain official approval. In these countries, devices and enclosures – sometimes even complete control systems – are tested and approved by independent bodies.

In Scandinavia and in Switzerland, an official approval for low-voltage switchgear and controlgear had to be sought to some extent. For industrial switchgear, this legal obligation has now been abolished, provided the devices have been manufactured and tested in accordance with harmonized European standards (such as IEC/EN 60947). There is then no longer a requirement for them to carry their country's own approval mark. Eaton develops switchgear to international

standards, such as IEC/EN 60947 and applies the corresponding marks. Devices that conform to the European Low-Voltage Directive and are sold within the European Union must contain the CE mark.

Europe, Conformité Européen (CE)

The CE mark indicates that the device corresponds with all relevant requirements and standards. Mandatory marking allows unrestricted use of marked devices within the European economic area.

Devices sold within the European union must comply with the Electro-magnetic Compatibility (EMC) Directive. Eaton has performed the required tests for all Moeller-branded products subject to this Directive and applied the CE mark, which demonstrates compliance with the EMC Directive. Because devices bearing the CE mark comply with the harmonized standards, approval and the associated marking is no longer required in the following countries: Belgium, Denmark, Finland, France, the Netherlands, Norway, Sweden, and Switzerland.

An exception is installation material. In some areas, miniature circuit breakers and residual current device must still be labeled and therefore carry the corresponding approval mark.

Belgien, Comité Electrotechnique Belge/Belgisch Elektrotechnisch Comité (CEBEC)

Germany, Verband Deutscher Elektrotechniker (VDE)

France, Union Technique de l'Electricité (UTE)

Austria, Österreichischer Verband für Elektrotechnik (ÖVE)

Switzerland, Schweizerischer Elektrotechnischer Verein (SEV)

Devices for export to the USA and Canada have either additional UL and CSA approval or are available in a separate version with UL and CSA approval.

USA, Underwriters Laboratories (UL) - Listing

USA, Underwriters Laboratories (UL) - Recognition

Canada, Canadian Standards Association (CSA)

Approval for electrical products is also required in Argentina, China, Russia, South Africa, and the Ukraine. Marking is partly mandatory for these countries. As in other European countries, the IEC rating data is accepted here. Romania requires that components that are to be used in public buildings must be approved by the Romanian test authority ICECON.

Russia

Devices for Russia must bear the appropriate marking.

Russia, Goststandart (GOST-R)

Ukraine

Devices for the Ukraine must bear the appropriate marking.

Ukraine, Goststandart (Ukrain-GOST)

China

Devices for China must bear the appropriate marking.

China, China Suitable Certification (CCC)

South Africa

In South Africa approval is mandatory for circuit breakers and busbar trunking systems: These devices must bear the appropriate marking.

South Africa, South African Bureau of Standards (SABS)

Argentina

In Argentina, mandatory approval is based on Resolution 92/98. From April 01, 2001, miniature circuit breakers and residual-current circuit breakers are subject to mandatory approval. As of this date, circuit breakers up to $I_n = 63$ A and $U_e \max = 440$ V must carry the following marks:

Argentinien, Instituto Argentino de Normalización y Certificación (IRAM)

Selection of devices

In addition to the required approvals and conformance with applicable regulations, the design of devices and systems themselves must be suitable for the target market. Points to keep in mind when selecting switchgear for export include:

Motor-protective circuit breakers

Use auto-protected circuit breakers, which are capable of controlling the highest prospective fault levels at the point of installation without the need for back-up protection.

Advantages

Can be positioned anywhere and are fully independent of the local circuit-protection system; no spare part problems

Circuit-breakers

Use makes with visible contacts, and quick-make and quick-break operation as standard. For high short-circuit levels, use current-limiting circuit breakers. Selective switches are recommended for the selective gradation of networks.

Advantages

Independence from local accident prevention regulations requiring visible contacts, and safety from faults caused by inexperienced operating personnel. The effects of shortcircuits are kept to a minimum. Fuseless installations offer greater safety and reliability in plant operation. In the event of a fault, only the faulty section of the system is isolated.

Contactors

Use contactors whose entire range provides consistently reliable operation in the event of voltage drops (80% U_n should be aimed for) and whose contact system will not assume an indeterminate position on closing or opening under these conditions.

Advantages

During the electrification work in areas such as Africa and the Middle East, an insufficient voltage stability is – at least for a certain time – likely in many applications (for example due to long spur lines or small local generators). The use of devices that fulfil the above requirements will eliminate one of the main failure causes related to contactors.

Enclosures

Use insulated enclosures with transparent covers (i.e. "totally insulated" enclosures).

Approvals and shipping classifications for world markets

Advantages

Total insulation is the best possible protective measure from the user's point of view, avoiding, reliance on the possibly doubtful skills of unknown installation personnel. Furthermore, protective measures based on grounding are often extremely difficult, if not impossible (in the Middle East, for example, due to the dryness of the ground). Insulated enclosures completely eliminate the need for any additional protection against corrosion. The transparent covers contribute significantly to the correct operation of a system, because switchgear operation can be monitored even with the doors or covers closed, thus virtually eliminating the possibility of these being left open through carelessness. The transparent cover is an important contribution to safety, especially where exports to areas of uncertain skills are concerned.

Overcurrent protection devices

Always use circuit breakers or motor-protective circuit breakers and avoid fuses wherever possible.

Advantages

The operational reliability of a system is especially important for export contracts. Circuit-breakers and motor-protective circuit breakers provide this reliability in full measure since they can be immediately reclosed once a fault has been cleared, they disconnect all poles, they have ideal protection through high tripping accuracy and they can be used for selective operation. Because they have no fuses or other consumables, they also greatly reduce the problem of obtaining replacement parts. The advantages of fuseless design for export are especially evident in this case. No complicated investigation is needed to find out which fusing system is used in the respective location and which specifications have to be followed to select the correct fuses. Often several different fuse systems with widely varying characteristics are used side-by-side in the same country. For the uninitiated, it may be almost impossible to find the right fuse in these circumstances. These problems do not arise where a circuit-breaker is used.

Main switch and safety switch

Use devices with positive contact separation and clear switch position indication.

Advantages

The mechanical coupling of the actuating element with the contacts ensures that the Off position is indicated only when all main contacts are separated by the prescribed distance, and only in this position can the switch be padlocked. This ensures safety when carrying out maintenance and repair work on the installation or machinery.

Shipping classifications

Many Moeller-branded Eaton devices are approved by all important shipping associations: Germanischer Lloyd, Lloyd's Register of Shipping, Bureau Veritas, Russian Maritime Register of Shipping, Registro Italiano Navale, Det Norske Veritas, Polski Rejestr Statków, etc. Because the status of currently valid shipping approvals is subject to significant variations, this Catalog does not provide an overview, as this would quickly be out of date.

Please see our corresponding, up-to-date information on the Internet. <http://www.eaton.eu/approvals>

Switchgear for the global market and for North America:

Practically all devices can be used in compliance with IEC norms.

The selection pages of this catalogue indicate the products that have been approved for the North American market with the USA and Canadian flags. This does not mean these devices are exclusively for North America! Approval for North America has been granted special emphasis due to the strong export share of these devices and because standards deviate from IEC/EN norms, selection and processing requirements must be highlighted. The article "Switchgear for North America" in the appendix of this catalogue contains everything you need to know about this subject. A glossary in the appendix explains the specifically American technical terms.

Information relevant for export to North America

Planning safety and process optimization: CAD data at the click of a mouse!

- 22.000 article data items and macros
- Download from EPLAN Data Portal
- Version P8

- Models for approx. 22,000 products
- 80 different neutral & native formats

www.eaton.eu/cad

Eaton is providing its customers with CAD data to offer optimum support during planning. Both electrical and mechanical design data can be called up quickly and conveniently from the Internet at any time. This reduces processing times, minimizes errors and thus reduces costs already in the engineering phase of control panels, systems and machinery.

eCAD: Eaton has product data and macros available for EPLAN Electric P8. More than 22,000 products, but will also be able to export them and import them into your own EPLAN item database.

mCAD: Eaton makes 2D and 3D data available for more than 20,000 products. Over 80 different neutral and native formats guarantee compatibility with the project engineering systems of the customer. The models can either be integrated directly into the planning software from the Partcommunity Portal on the Internet or via the CADENAS Partsolution software.

Eaton's electrical business is a global leader with deep regional application expertise in power distribution and circuit protection; power quality, backup power and energy storage; control and automation; life safety and security; structural solutions; and harsh and hazardous environment solutions. Through end-to-end services, channel and an integrated digital platform & insights Eaton is powering what matters across industries and around the world, helping customers solve their most critical electrical power management challenges.
