8. Geëigende technische documentatie en/of specifieke technische documentatie: -

De prestaties van het hierboven omschreven product zijn conform de aangegeven prestaties. Deze prestatieverklaring wordt in overeenstemming met Verordening (EU) nr. 305/2011 onder de exclusieve verantwoordelijkheid van de hierboven vermelde fabrikant verstrekt.

Ondertekend voor en namens de fabrikant door:

Thilo Pregartner, Dr.-Ing.
Tumlingen, 2020-10-19

Peter Schillinger, Dipl.-Ing.

Deze DoP is opgesteld in meerdere talen. In het geval van geschillen over de interpretatie zal de Engelse tekst altijd prevaleren.

Het aanhangsel bevat vrijwillige en aanvullende informatie in het Engels die de (taal-neutraal gespecificeerde) wettelijke vereisten overschrijdt.

Specific Part

1 Technical description of the product

The fischer concrete screw ULTRACUT FBS II is an anchor of sizes 6, 8, 10, 12 and 14 mm made of hardened carbon steel. The anchor is screwed into a predrilled cylindrical drill hole. The special thread of the anchor cuts an internal thread into the member while setting. The anchorage is characterised by mechanical interlock in the special thread.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex B 4, Annex C 1 and C 2
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C 1 and C 2
Displacements and Durability	See Annex C 7 and Annex B 1
Characteristic resistance and displacements for seismic performance categories C1 and C2	See Annex C 3, C 4 and C 7

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C 5 and C 6

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with European Assessment Document EAD No. 330232-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

Specification of intended use

Table B1.1: Anchorages subject to

Size	6		8		10			12			14		
Nominal embedment depth [mm]	40-55	50	65	55	65	85	60	75	100	65	85	115	
Static and quasi-static loads in cracked and uncracked concrete	✓												
Fire exposure													
Seismic performance category C1	✓		✓			✓			✓			✓	
Seismic performance category C2													

Base materials:

- Compacted reinforced or unreinforced normal weight concrete without fibres (cracked and uncracked) according to EN 206:2013+A1:2016
- Strength classes C20/25 to C50/60 according to EN 206:2013+A1:2016

Use conditions (Environmental conditions):

- Structures subjected to dry internal conditions

Design:

- Anchorages are to be designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the screw is indicated on the design drawings (e.g. position of the screw relative to reinforcement or to supports, etc.).
- Design of fastenings according to EN 1992-4: 2018 and EOTA Technical Report TR 055.

Installation:

- Hammer drilling or hollow drilling:
All sizes and embedment depths.
- Alternative diamond drilling: All sizes and embedment depths from diameter 8.
- Screw installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters on site.
- In case of aborted hole: New hole must be drilled at a minimum distance of twice the depth of the aborted hole or closer, if the hole is filled with a high strength mortar and only if the hole is not in the direction of the oblique tensile or shear load.
- Adjustability according to Annex B4 for: All sizes and embedment depths.
- Cleaning of drill hole is not necessary when using a hollow drill with functional suction or:
 - If drilling vertically upwards
 - If drilling vertical downwards and the drill hole depth has been increased. It is recommended to increase the drill depth with additional $3 d_0$
- After correct installation further turning of the screw shall not be possible.
- The head of the screw must be fully engaged on the fixture and show no signs of damage.
- For seismic performance category C2 applications: The gap between screw shaft and fixture must be filled with mortar; mortar compressive strength $\geq 50 \text{ N/mm}^2$ (e. g. FIS V, FIS HB, FIS SB or FIS EM Plus).

Adjustment

It is permissible to untighten the screw up to two times for adjustment purposes. Therefore, the screw may be untightened to a maximum of $L_{adj} = 20$ mm to the surface of the initial fixture.

The total permissible thickness of shims added during the adjustment process is $t_{adj} = 10$ mm

(Fig. not to scale)

¹⁾ Drill hole depth according to table B2.1

fischer concrete screw ULTRACUT FBS II	Annex B 4 Appendix 10/ 19
Intended use Adjustment Minimum thickness of members, minimum spacing and edge distance	

Installation instruction part 1

Step 1: Creation of the drill hole:

Drill the hole using hammer drill, hollow drill or diamond core drill (from diameter 8).

Drill hole diameter d_0 and drill hole depth h_1 according to table B2.1 and B3.1

Step 2: Cleaning of the drill hole - horizontal:

Clean the drill hole. This step can be omitted in the preparation of the hole by using a hollow drill bit or diamond core drill. (recommendation: use the fischer FHD hollow drill bit)

Step 2: Cleaning of the drill hole - vertical:

Cleaning of the drill hole can be omitted, if drilling vertically upwards or if drilling vertically downwards and the hole depth has been increased. It is recommended to increase the drill hole depth by an additional $3 \times d_0$ when drilling vertically downwards.

Step 3: Installation:

Installation with any torque impact screw driver up to the maximum mentioned torque moment ($T_{imp,max}$ according to table B2.1 and B3.1).

(recommendation: use the fischer FSS 18V 400BL)

Alternatively, all other tools without an indicated torque moment are allowed (e.g. ratchet spanner). The indicated torque moments $T_{imp,max}$ for impact screw driver are not decisive for manual installation.

Step 4: Checking of the correct installation:

After installation a further turning of the screw must not be possible. The head of the screw must be in contact with the fixture and is not damaged

Intended use
Installation instruction

Annex B 5

Appendix 11/ 19

Installation instruction part 2

Adjustment

Optional:

It is permissible to adjust the screw twice. Therefore, the screw may be untightened to a maximum of $L_{adj} = 20$ mm off the surface of the initial fixture. The total permissible thickness of shims added during the adjustment process is $t_{adj} = 10$ mm.

Filling of the annular gap

For seismic performance category C2 applications: The gap between screw shaft and fixture must be filled with mortar; mortar compressive strength ≥ 50 N/mm² (e. g. FIS V, FIS HB, FIS SB or FIS EM Plus). As an aid for filling the gap, the filling disc FFD is recommended.

Table C5.1: Characteristic values for resistance to fire with FBS II 6¹⁾

FBS II 6							
Nominal embedment depth	h_{nom}	[mm]	40	45	50	55	
Steel failure for tension load and shear load							
Characteristic resistance for all head shapes	$N_{Rk,s,fi}$	R30	[kN]	1,00			
		R60		0,60			
		R90		0,50			
		R120		0,40			
	$V_{Rk,s,fi}$	R30		1,00			
		R60		0,60			
		R90		0,50			
		R120		0,40			
Characteristic bending resistance for all head shapes	$M^0_{Rk,s,fi}$	R30	[Nm]	0,80			
		R60		0,50			
		R90		0,40			
		R120		0,35			
Pullout failure							
Characteristic resistance	$N_{Rk,p,fi}$	R30	[kN]	0,6	0,9	1,0	
		R60					1,2
		R90					
		R120					
				0,5	0,7	0,8	
Edge distance							
R30 to R120	$C_{cr,fi}$	[mm]	2 h_{ef}				
In case of fire attack from more than one side, the minimum edge distance shall be ≥ 300 mm							
Spacing							
R30 to R120	$S_{cr,fi}$	[mm]	2 $C_{cr,fi}$				
¹⁾ The embedment depth has to be increased for wet concrete by at least 30 mm compared to the given value.
