

Similar to illustration

Typical weather protection functions move all the building's shades into a safe position and lock them there when there is a risk of damage; in contrast, the "Dynamic Wind Monitoring" function allows selective weather protection. In the presence of strong winds, it only protects the shades that are actually at risk of damage according to a wind analysis. This means the slat tracking for glare-free operation and the automatic thermal control for reducing cooling loads can remain active for the remaining blinds, for example. That way, they can continue to maximize comfort and optimize energy efficiency and CO2 savings. Taking local wind profiles into account also provides better protection against damage.

Notes

Note

This is an additional function for the "Weather Station" application.
A license is required for productive use of the "Dynamic Wind Monitoring" function without time restriction. The full scope of this function can be used for evaluation without a license for 30 days.
To download the license to the device, WAGOupload software is required, which can be obtained free of charge from the WAGO homepage.
Internet connection may be required for license activation.
