WAGO Lighting Management is a highly sophisticated solution for lighting control in large spaces, such as production facilities and warehouses. By combining predefined hardware and user-friendly software, WAGO offers a lighting management system that makes planning and commissioning new lighting systems easier while providing numerous advantages for operation. The basic idea: WAGO Lighting Management is designed around the need to meet the vastly different light requirements of both warehouses and production facilities. For example, a production facility can be divided into virtual rooms in which light can be adapted flexibly. Each virtual room receives signals from sensors and actuators to set the appropriate light intensity automatically. Virtual rooms allow quick, easy implementation of both conversions and room changes, as well as easy operation via Web configuration.
