ABB Purpose & Embedding Sustainability

ABB is committed to continually promoting and embedding sustainability across its operations and value chain, aspiring to become a role model for others to follow. With its ABB Purpose, ABB is focusing on reducing harmful emissions, preserving natural resources and championing ethical and humane behavior.

General Information

Reference product	Cover plate 2gang, Future linear (2CKA001710A3164)
Description of the product	The product family covered in this study is called Cover Plate (Thermoplastic). It is used as an aesthetical cover plate for universal data connection boxes which protects persons from direct contact. The product is a white square (63,14x63,21x17,64 mm), which is mainly made of thermoplastic (polycarbonate) and steel components (for the screws). It is designed for the indoor application and is mounted onto the outlet using a screwdriver.
Functional unit	Protect users during 20 years against direct contact with live parts, with a protection class IP and IK.
Other products covered	Variant 1: Cover plate 2gang, Reflex SI (2CKA001753A8402); Variant 2: Cover plate 2gang, Balance SI (2CKA001753A0226); Variant 4: Cover plate Telephone, Reflex SI (2CKA001724A0913); Variant 5: Cover plate Telephone, Balance SI (2CKA001724A4333); Variant 6: Cover plate Telephone, Future linear (2CKA001710A3162); Variant 7: Cover plate TV, Reflex SI (2CKA001724A1754) Variant 8: Cover plate Antenna, Balance SI (2CKA001724A4335); Variant 9: Cover plate TV, Future linear (2CKA001724A2774)

Additional Environmental Information

Manufacturing	<p>The Cover plate is produced at and delivered from two internal BJE sites in Germany. One site is in Lüdenscheid and the other one in Bad Berleburg/Aue. The thermoplast molding, assembly and packaging is performed in Bad Berleburg/Aue, while the storage and distribution happens in and from Lüdenscheid. The screws and packaging materials are procured from an external supplier. No recycled material content is assumed. All components are transported by lorry from the supplier to these two manufacturing sites.</p> <p>The manufacturing waste for all materials is included. The values are as follows, based on BJE expert knowledge: 2,9% for metal, 2% for paper and cardboard, 2% for metal, and 30% for all remaining materials (based on chapter 3.1.5.1.2 of PSR-0005-ed3).</p> <p>The electricity mix on both manufacturing sites is largely renewable from Scandinavian hydropower and rooftop solar power on the Lüdenscheid site (together 82% in Bad Berleburg/Aue and 81% in Lüdenscheid). Instead of hydropower, a German electricity market mix was modelled to avoid double counting of renewable energy. The remaining power and heating demand is met by combustion of natural gas, for which all CO₂ emissions are compensated through ClimatePartner. Nevertheless, this compensation is not accounted for in the model of this EPD.</p> <p>Production waste is assumed to be transported by lorry (1000 km by default in the PCR) and treated by incineration (without energy recovery).</p> <p>Specific one-year data from 2022 on manufacturing site level was collected and allocated to the product by economic partitioning following the requirements of ISO 14044.</p>
Distribution	<p>The transport scenario is estimated based on the distance to the capital city of the countries it is sold to, according to the sales data for 2022.</p>
Installation	<p>Installation is done manually with the help of a screwdriver, without using energy or other auxiliary materials. Treatment of packaging waste is included in this stage, assuming an incineration scenario.</p>
Use	<p>No power is consumed during the use stage, as the Cover plate is solely an aesthetic protective cover with no energy use itself.</p>
End of life	<p>The standard scenario set in the PCR is considered.</p>
Benefits and loads beyond the system boundaries	<p>Steel has a recovery rate of 80% according to the PCR. The Module D formula from the PCR was used to calculate the benefits of steel. Other materials were not included here, due to a material recovery rate of 0 or lack of recycling in real life scenarios.</p>

Environmental Impacts

Reference lifetime	20 years
Product category	3.13 "Other equipment"
Installation elements	Not applicable
Use scenario	Not applicable
Geographical representativeness	Production site data is for Germany, power consumption during the use stage is related to the country it is sold to, all other data has a European scope.
Technological representativeness	Materials and process data are specific for the production of the Cover Plate.
Software and database used	SimaPro 9.4.0.2., ecoinvent 3.8, PEF 3.0

Energy model used

Manufacturing	Electricity, high voltage {DE} market for Cut-off, U Electricity, low voltage {DE} electricity production, photovoltaic, 3kWp slanted-roof installation, single-Si, panel, mounted Cut-off, U Natural gas, high pressure {DE} market for Cut-off, S
Installation	Not applicable
Use	Not applicable
End of life	A market for electricity from all European countries except Switzerland and Austria is included in the dataset used to model the End of Life of steel ("Steel, low-alloyed {Europe without Switzerland and Austria} steel production, electric, low-alloyed Cut-off, U")

Extrapolation Factors

For other products than the Reference product covered by this PEP, the environmental impacts for each phase of the lifecycle are obtained by multiplying the values of the Reference product by the following coefficients:

* if the coefficient is "1", the impacts of the phase of the life cycle are assimilated to the Reference product, meaning that the impacts are unchanged in comparison to the Reference product

Environmental Impact Indicator Glossary

Impact indicators

Indicator	Description	Distribution
Global warming potential (GWP) - total	Indicator of potential global warming caused by emissions to air contributing to the greenhouse effect. The total global warming potential (GWP-total) is the sum of three sub-categories of climate change. GWP-total = GWP-fossil + GWP-biogenic + GWP- land use and land use change	kg CO ₂ eq.
Ozone depletion (ODP)	Emissions to air that contribute to the destruction of the stratospheric ozone layer	kg CFC-11 eq.
Acidification of soil and water (A)	Acidification of soils and water caused by the release of certain gases to the atmosphere, such as nitrogen oxides and sulphur oxides	H+ eq.
Eutrophication (E)	Indicator of the contribution to eutrophication of water by the enrichment of the aquatic ecosystem with nutritional elements, e.g. industrial or domestic effluents, agriculture, etc. This indicator is divided to three: freshwater, marine and terrestrial.	kg P eq., kg N eq., mole N eq.
Photochemical ozone creation (POCP)	Indicator of emissions of gases that affect the creation of photochemical ozone in the lower atmosphere (smog) because of the rays of the sun.	kg NMVOC eq.
Depletion of abiotic resources – elements (ADPe)	Indicator of the depletion of natural non-fossil resources	kg Sb eq.
Depletion of abiotic resources – fossil fuels (ADPf)	The use of non-renewable fossil resources in an unsustainable way (e.g. from material to waste)	MJ (lower heating value)
Water Deprivation potential (WDP)	Deprivation-weighted water consumption. Assesses the potential of water deprivation, to either humans or ecosystems, building on the assumption that the less water remaining available per area, the more likely another user will be deprived.	m ³ e depr.

Resource use indicators

Indicator	Description	Distribution
Total use of primary energy	Total use of non-renewable primary energy resources (primary energy and primary energy resources used as raw materials) + Total use of renewable primary energy resources (primary energy and primary energy resources used as raw materials)	MJ (lower heating value)
