ABB is committed to continually promoting and embedding sustainability across its operations and value chain, aspiring to become a role model for others to follow. With its ABB Purpose, ABB is focusing on reducing harmful emissions, preserving natural resources and championing ethical and humane behavior.

## **General Information**

Reference product	Product TY27MX
Description of the product	Ty-Raps® are cable ties characterized by a corrosion-resistant, non- magnetic stainless-steel locking barb in its head grips tightly and allows for a completely adjustable fit. Moreover, its raised tail makes it easy to pick up, even with gloved hand, and its easy-grip tail surface makes it easy to pull tight, even in wet or cold conditions.
Functional unit	The function unit is to mount a cable or a tube at a point with a cable tie with a clamping capacity between 1.5 mm and 229 mm for a reference lifetime of 20 years. The reference product is one piece of TY27MX cable tie with a weight of 4.043 g and its packaging of 0.5804 g.
Other products covered	List of other products covered in this PEP is presented in the paragraph which concerned the extrapolation rules

Manufacturing	The manufacturing stage includes the production and transportation to the manufacturer's last logistic platform of Ty-Rap® cable ties and its packaging. The final assembly of the product is carried out at ABB's plant located in Vega Baja (PR)
Distribution	The transport from ABB PR factory to storages (Byhalia, Mississippi and Phoenix, Arizona) sites were taken into account. For the distribution of the product from storages to the final customer, secondary data for the distance has been used for lorry and a weighted average has been computed relative to distances with a cut- off about 10%.
Installation	No installation materials are required in the life cycle of the product. During this phase there is the disposal of the excess cable tie cut and the packaging.
Use	No material and energy consumption occur during the use stage. No maintenance happens during the use phase, the environmental impacts linked to this procedure have been considered equal to zero in the respective results section.
End of life	The default end-of-life scenario provided by the PCR document has been adopted for the the Ty-Rap® cable ties (100% incineration).
Benefits and loads beyond the system boundaries	No benefits and loads beyond the system boundaries has been considered.

# Environmental Impacts

Reference lifetime	20 years
Product category	PCR-ed4-EN-2021 09 06 PSR-0003-ed2-EN-2023 06 06
Installation elements	No installation materials are required in the life cycle of the product. During this phase there is the disposal of the excess cable tie cut
Use scenario	No material and energy consumption occur during the use stage. No maintenance phase is planned for the the Ty-Rap® cable ties.
Geographical and temporal representativeness	The geographical representativeness is global. All primary data collected from ABB are from 2022, which is a representative production year. Secondary data refers to the ecoinvent database v3.9.1 published in 2022. The temporal coverage for each secondary process used in the LCA model is specified in the metadata section of the ecoivent database
Technological representativeness	Technological representativeness refers to the specific production process for primary data.
Software and database used	SimaPro 9.5 and ecoinvent 3.9.1
Energy model used	
Manufacturing	The energy-related processes used for the inputs of the manufacturing stage is an ad-hoc process which considers 100% hydroelectric energy Netherlands as reported in the RECs.

Installation	No energy consumption occur during the installation stage.
Use	No energy consumption occur during the use stage.
End of life	The energy-related processes used for the inputs of the end-of-life stage are those included in ecoinvent 3.9.1

#### Approach for extrapolation rules applied to a homogeneous environmental family

The PEP can cover products different from the reference product if they belong to a homogeneous environmental family. This means that the group of products must satisfy the following characteristics:

- same function;
- same product standard;
- same manufacturing technology: the same type of materials and same manufacturing processes.

The Ty-Rap® cable ties product family satisfy these conditions, so extrapolation rules were applied to assess the environmental impact of the products belonging to the family, following the PCR indication. No extrapolation rules for cable management products are set in the PSR, thus the next steps have been followed to define the extrapolation rules:

- analyse the products covered by the PEP belonging to the same homogenous family;
- perform the LCA of a representative product of the homogeneous family;
- identify and quantify the product parameters that vary between the various products of the homogeneous environmental family (i.e. dimensions, the weight of parts, materials, energy consumption, etc.).

Lastly, a sensitivity analysis was performed for each life cycle stage to identify which parameters of the ones selected are sensitive to environmental impacts to create extrapolation rules.

The parameters identified are listed below:

- ties weight;
- packaging weight;
- ties composition (nylon and steel);
- input of recycled nylon.

The representative product considered for the calculation of the extrapolation rules is TY27MX. This product is most representative for the sales.

The products included in the Ty-Rap® cable ties product family and considered for the application of the extrapolation rules are resented in the following table.

#### **Extrapolation rules**

The extrapolation rules have been calculated based on the environmental impact assessment results considering all 20 products, and the sensitivity analysis carried out to individuate the influential parameters.

For the manufacturing stage, distribution stage and end-of-life stage, the influential parameters considered for the calculation of the LCIA impacts of the variants are the ties weight, packaging weight and ties composition (nylon and steel). For the end-of-life stage, the influential parameters considered for the calculation of the LCIA impacts of the variants are the ties weight and ties composition (nylon and steel). For the installation stage, the influential parameter considered for the calculation of the LCIA impacts of the variants are the ties weight and ties composition (nylon and steel). For the installation stage, the influential parameter considered for the calculation of the LCIA impacts of the variants is the packaging weight. The calculation of the LCIA impacts of the variants is the packaging weight. The calculation of the LCIA impacts of the variants through these parameters indicated that the correlation between the impacts of the representative product and the variants is linear. For the creation of extrapolation rules, the extrapolation principle applied is a linear correlation between the impacts and weight of cable ties for the production and end-of-life stages, and between the impacts and weight of the cable tie + weight of the packaging for the distribution and installation stages.

Each environmental indicator value shall be calculated using the following formulas:

For the manufacturing and end-of-life stages:

$$y = a_n x_1 + b_n$$

where x1 is the weight of the cable tie (g);

For distribution and installation stages:

$$y = a_n x_2 + b_n$$

where  $x^2$  is the weight of the cable tie (g) + weight of the packaging referred to the functional unit (g).

For the weight of the cable tie + weight of the packaging of all the variants, please refer to the table above.

The calculation of the coefficients a&b for the Use Stage was not performed because the selected parameters do not affect the values for this stage.

The following table reports the linear coefficients an & bn for each life cycle stage.

#### Comparability

EPDs published within the same product category, though originating from different programs, may not be comparable. Full conformance with a PCR allows PEP comparability only when all stages of a life cycle have been considered. However, variations and deviations are possible.

#### Applicable product standards

List of applicable product standards and certifications for Ty-rap products: Lloyd's Register of Shipping, DNV-GL, Mil Specification, American Bureau of Shipping (ABS), CE declaration, compliant to the low voltage directive, EN/IEC 62275, UL 62275, CSA 62275, MS3367/3368 and EN45545.

### Environmental Impact Indicator Glossary

### Impact indicators

Indicator	Description	Distri- bution
Global warming potential (GWP) - total	Indicator of potential global warming caused by emissions to air contributing to the greenhouse effect. The total global warming potential (GWP-total) is the sum of three sub-categories of climate change. GWP-total = GWP-fossil + GWP-biogenic + GWP- land use and land use change	kg CO₂ eq.
Ozone depletion (ODP)	Emissions to air that contribute to the destruction of the stratospheric ozone layer	kg CFC-11 eq.
Acidification of soil and water (A)	Acidification of soils and water caused by the release of certain gases to the atmosphere, such as nitrogen oxides and sulphur oxides	H+ eq.
Eutrophication (E)	Indicator of the contribution to eutrophication of water by the enrichment of the aquatic ecosystem with nutritional elements, e.g. industrial or domestic effluents, agriculture, etc. This indicator is divided to three: freshwater, marine and terrestrial.	kg P eq., kg N eq., mole N eq
Photochemical ozone creation (POCP)	Indicator of emissions of gases that affect the creation of photochemical ozone in the lower atmosphere (smog) because of the rays of the sun.	kg NMVOO eq.
Depletion of abiotic resources – elements (ADPe)	Indicator of the depletion of natural non-fossil resources	kg Sb eq.
Depletion of abiotic resources – fossil fuels (ADPf)	The use of non-renewable fossil resources in an unsustainable way (e.g. from material to waste)	MJ (lower heating value)
Water Deprivation potential (WDP)	Deprivation-weighted water consumption. Assesses the potential of water deprivation, to either humans or ecosystems, building on the assumption that the less water remaining available per area, the more likely another user will be deprived.	m³ eq. depr.

### Resource use indicators

Indicator	Description	Distri- bution
Total use of primary energy	Total use of non-renewable primary energy resources (primary energy and primary energy resources used as raw materials) + Total use of renewable primary energy re-sources (primary energy and primary energy resources used as raw materials)	MJ (lower heating value)
