

# ENSTALL

## ClickFit Evo

TILED ROOF

## Mounting has never been this easy

Thanks to the clever click connection, you only need 4 components for a simple, easy and fast installation.

### Fastening of your choice; hooks or screws

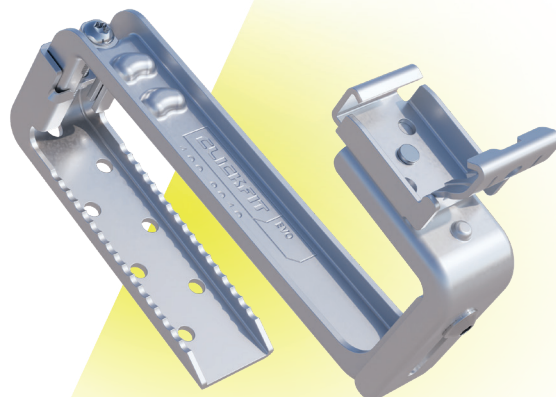

Drilling into the roof construction is not necessary thanks to the universal roof hook. If you prefer to use screws, choose the Truss Hook or the Roof Hook Pro.

### Flexible and easy mounting

With Clickfit EVO, you only need one tool. The revolutionary hook and click technique makes other tools unnecessary. Thanks to the clever design of this innovative mounting system, you can install panels both horizontally and vertically.

## Why ClickFit Evo for Tiled Roof?

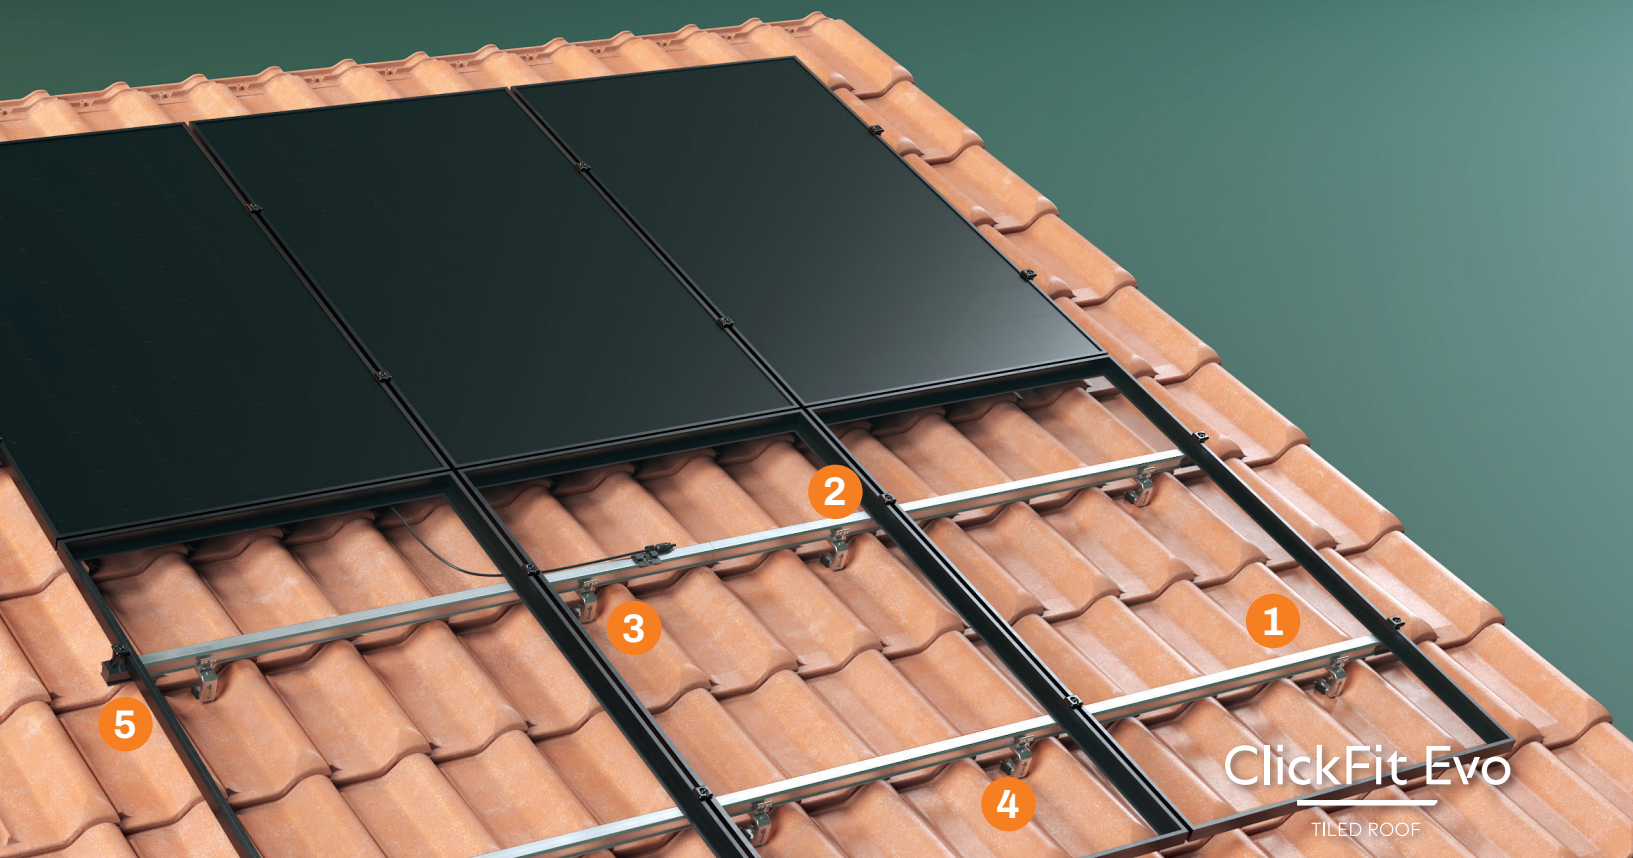

- ✓ Strong Magnelis® steel hook system
- ✓ Compatible with portrait and landscape mounting
- ✓ Lightweight and strong
- ✓ Also available in aesthetically pleasing black
- ✓ Integrated cable management

# Rock-solid base for solar panels

ClickFit Evo

TILED ROOF

## Patented click connection

The roof hook has a self-aligning click connection. This makes the mounting rail quick and easy to install.

## Universally adjustable

The universal Roof Hook is infinitely adjustable to fit all standard roof tile/batten combinations.

## Integrated cable management

Cables and plugs can always be neatly and safely tied up in the roof hook.

## Screw option possible

If clamping behind the batten is not possible, use the Truss Hook. You can combine the Roof Hook and Truss Hook in one solar project if/when necessary.

## Always the right measurements

The universal module clamp is height-adjustable and therefore suitable for solar panels with a frame thickness of 30-50 mm.
