

## New installation system - high speed mounting!

These key parts are firmly locking the front cover of the board section

Learn more about Eaton ProfiSNAP.

## ProfiSNAP

is a new installation system based on a new front cover locking mechanism. The new system replaces the **previous Profi+ installation system**. This technical innovation not only offers advantages during installation, but has also other positive effects such as a reduction in parts (compared to the previous solution) and therefore lower stock-keeping costs.

### Within seconds and error-free assembly - the secret behind it

The new snap technology ensures that the front cover always fits perfectly and that no errors can occur. The new locking mechanism is already pre-assembled on the front cover. When it is slid through the openings provided, the small side wings are squeezed in and, once fully pushed through, are pressed back into the initial position by an internal spring with two audible clicks. These clicks during assembly indicate that the front cover is firmly connected. This process happens within seconds.

### ALL ADVANTAGES AT A GLANCE:

- **Tool-less** installation via snap-in method (DST patented technology)
- **Integrated sealing** functionality
- **Self-earthing function** included
- **Fully metal** constructed for durability (no plastic due to fire regulations)
- **Horizontal leveling** compensates manufacturing tolerances
- **Modern look, feel and handling procedure**
- **Captive fastener** always pre-mounted for highest convenience

**EATON**

Powering Business Worldwide

#### Step 1

The locking mechanism will be positioned where the front cover should sit.

#### Step 2

With a little push it gets connected to the board (sounds like a 'click - click').

#### Step 3

This is the final position of the firmly connected front cover.

#### Step 4

For demounting: just use a standard sized slotted screwdriver and make a quarter turn to the left.

#### Step 5

With a quarter turn, the front cover disconnects from the board and is ready to remove.

## Profi+ becomes ProfiSNAP

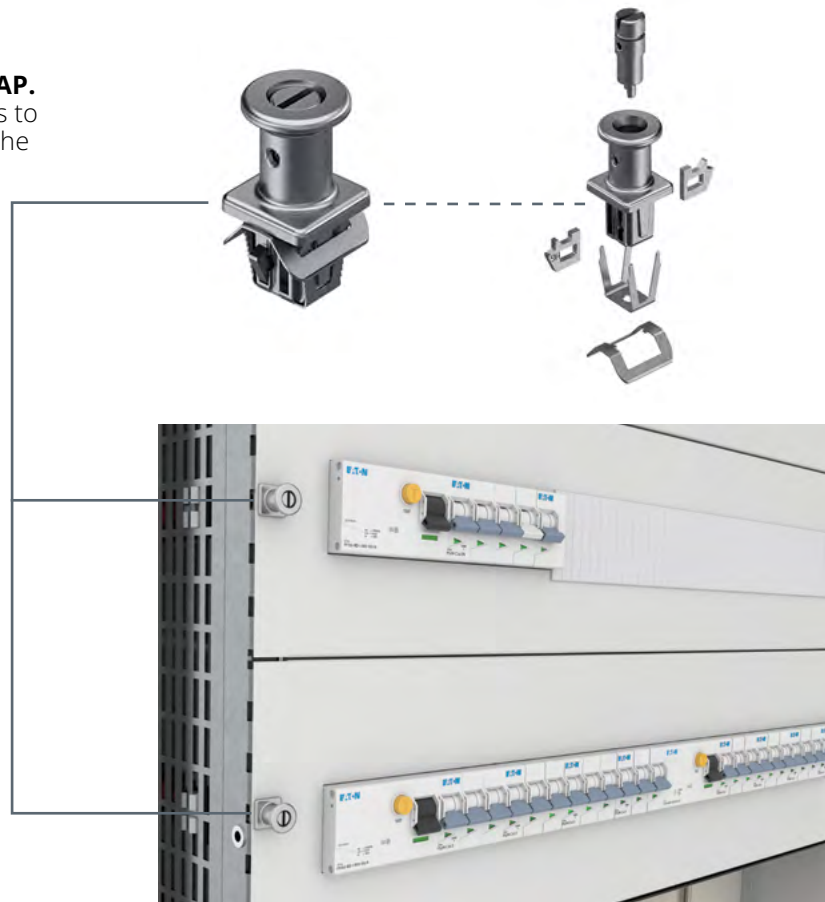

The existing **Profi+** will be replaced by the new **ProfiSNAP**. The new snap technology which is a patented system helps to do your job more efficient. What are you going to do with the gained time?

### Advantages of the new snap technology

- Up to 50% time saving during mounting
- Tool-less usage
- Customized design
- High-performance and friction-locked connection
- Vibration and earthquake-proof
- Corrosion resistance

### What else is coming with the change?

- Standard color RAL 7035 for cabinet interior parts
- Complexity reduction: 50% less parts need. One new part replaces up to three or four old parts.
- New types abbreviation: e.g PSN-FP-800/150-45 (ProfiSNAP Front Plate 800 mm wide / 150 mm high, with 45 mm cut-out)

RAL 7035
