Current transformer terminal block, 2007 Series, Push-in CAGE CLAMP®

Our current transformer terminal block (item number 2007-8821/044-000) simplifies electrical installations. Ensure that the strip lengths are between 13 and 15 mm when connecting conductors to this current transformer terminal block. This product features conductor terminals and utilizes Push-in CAGE CLAMP®. Push-in CAGE CLAMP® connection technology is ideal for connecting all conductor types. Both solid and fine-stranded conductors with ferrules can be plugged in without the need for tools—all thanks to its pluggable design. Depending on the type of conductor, this current transformer terminal block is designed for conductor cross sections ranging from 0.5 mm² to 10 mm².

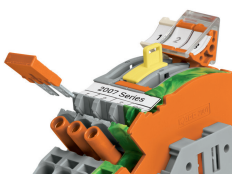
Installation Notes

Commoning

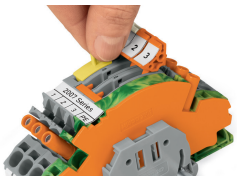


Additional commoning option on the transformer side

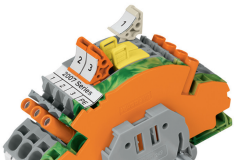
Preparing shorting path for the current transformer circuits.

Insert insulated, touch-proof circuit jumpers into jumper slot.

Insert insulated, touch-proof circuit jumpers into jumper slot.



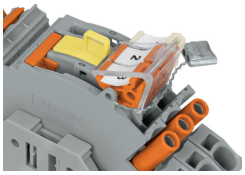
Lock-out prevents accidental operation of disconnect link.



Lock-out snaps into one of two notched positions.

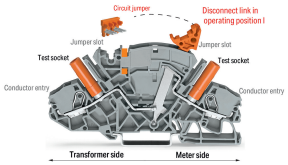
Locking system

Using locking covers or profiles for adjacent terminal blocks allows disconnect links to be operated simultaneously.

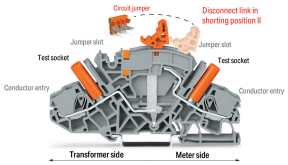


A lock-out seal can be used on the disconnect link in operating position I when combined with an end and separator plate (Item No. 2007-8893 or Item No. 2007-8894).

Interlocking link mechanically locks multiple links for multi-pole switching applications.



Disconnect/Test Terminal Block (Item No. 2007-8821)



Disconnect/Test Terminal Block (Item No. 2007-8821)

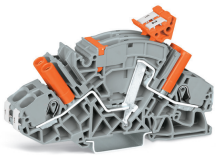
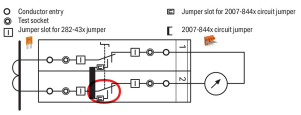
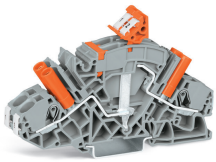
Measurement



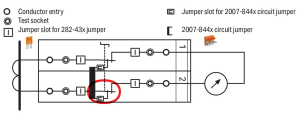
Disconnect link in operating position I
Terminal blocks required:
2 x disconnect/test terminal block (Item No. 2007-8821)
1 x circuit jumper, orange (Item No. 2007-8442)
Locking covers or interlocking links (option)



In the operating position, the measurement device is connected to the transformer, the circuit jumper is inserted and the disconnect link is in position I.



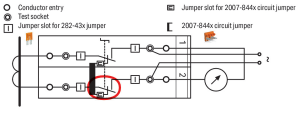
Disconnect link in shorting position II



The transformer is not disconnected from the measuring device yet, the shorting path is activated by moving the disconnect link into shorting position II and the transformer is safely shorted.

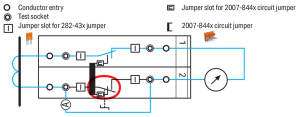
Measurement

Test current measurement: Disconnect link in measuring position III



The measuring device is electrically disconnected from the transformer. If required, an external voltage can be applied to the measuring device via the test socket.

Measurement testing (using both test sockets)
Terminal block 1: Disconnect link in operating position I
Terminal block 2: Disconnect link in measuring position III



Measurement testing: First insert the reference current meter (A) into the test socket, then move the disconnect link into measurement point III (test current measurement).

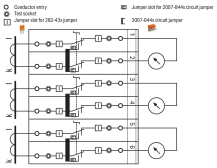
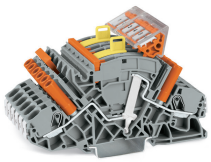
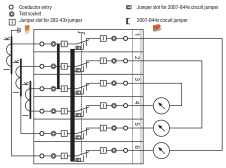
Measuring set for a three-phase current transformer
Terminal blocks required:
6 x disconnect/test terminal block (Item No. 2007-8821)
3 x circuit jumper, orange (Item No. 2007-8442)
In addition: interlocking link, locking cover, lock-out



Pairs of disconnect links are interconnected via locking cover or interlocking link. Measurement testing is performed after the interlocking is released.



Measuring set for a three-phase current transformer with 'Y' point
Terminal blocks required:
6 x disconnect/test terminal block (Item No. 2007-8821)
1 x circuit jumper, orange (Item No. 2007-8446)
1 x jumper, orange (Item No. 282-433)
In addition: interlocking link, locking cover, lock-out



All six disconnect links are interconnected via locking cover or interlocking link.

Marking

Marking via WMB Multi markers or marking strips.
