

BA-2016: External Bending spring 20x2 l=50cm

Commercial information

We recommend using a bending spring to make bends in a multilayer pipe. This will prevent kinks in the pipe when bending. That is why the bending spring is placed around the pipe before bending. It is a steel spiral spring; the thin spiral forms allow you to easily make any bends. For a 90° bend, an elbow fitting is recommended.

Certificates

Applications

Potable water, Heating, Cooling, Compressed air, Underfloor Heating, Gas, Sanitary

Solutions

Building installations, Industry, Underfloor heating, Oil & gas, Utility, Shipbuilding

Technical characteristics

| | | | |
|-----------------------------------|---|---------------|------------------|
| Suitable for aluminium tube | ✓ | Tube diameter | 20 20 Millimetre |
| Suitable for plastic tube | ✓ | | |
| Suitable for copper tube | ✗ | | |
| Suitable for steel tube | ✗ | | |
| Suitable for stainless steel tube | ✗ | | |
| Suitable for other tube materials | ✗ | | |
| With inner cable | ✗ | | |
