

TECHNICAL DATA SHEET

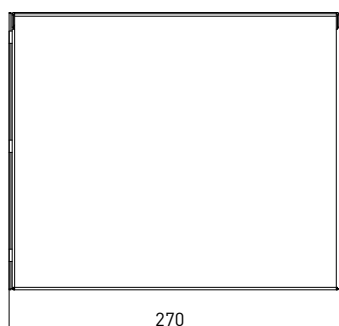

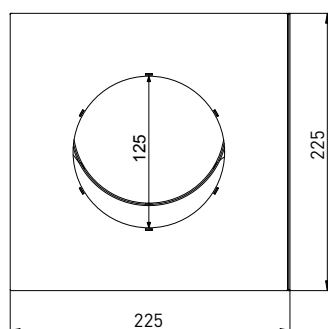

Kitchen Box Duo

The kitchen box can be used in existing buildings where only one connection point is available in the kitchen for both the cooker hood and the ventilation valve. It is equipped with 2 ventilation inlets of Ø125 to which 2 ventilation valves or 1 ventilation valve and a motorless extractor hood can be connected. Furthermore, there is 1 ventilation outlet Ø125 for connection to the connection point. Optionally, an Intelli Air Valve can be installed in the kitchen box. The kitchen box is also equipped with an additional restriction valve that can compensate for pressure differences between different kitchen boxes. In this way, the control range of the intelli air valve can be maximally used. A Duco control switch can be connected to the iAV. Please note that a wireless control switch must be placed in the same room as the kitchen box.

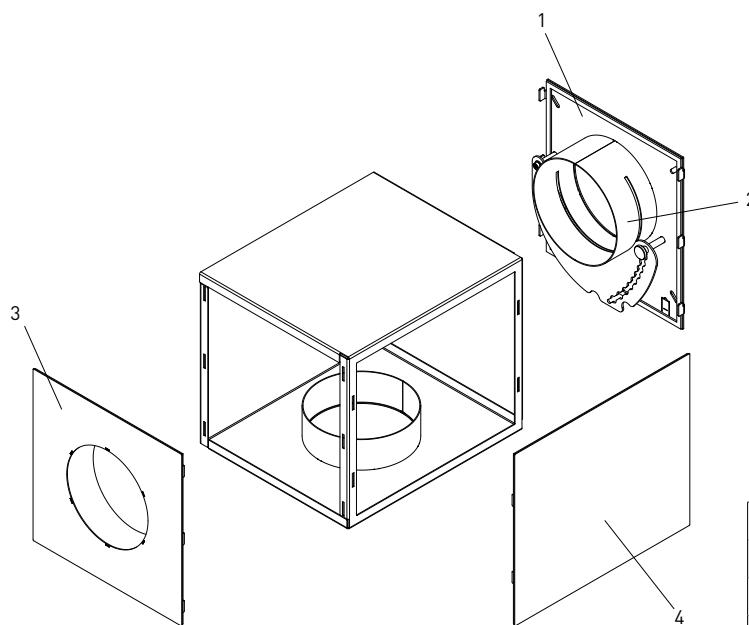

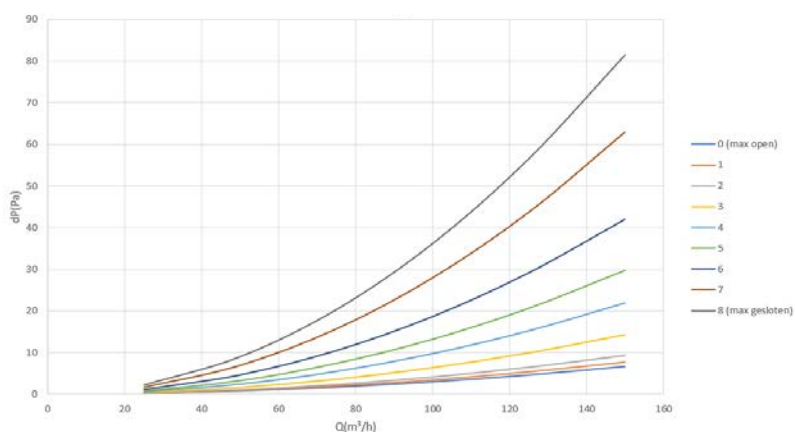

Physical characteristics

Item number	0000-4626
Dimensions (W x H x D)	225 x 225 x 270 mm
Weight:	3,5 kg
Material	Sheet steel
Applicable with	Duco Intelli Air Valve, Duco RoofFan, DucoVent ZR (Hygro)
Colour	RAL 9010
