

BI-1612: Internal Bending spring 16x2 l=50

Commercial information

We recommend using a bending spring to make bends in a multilayer pipe. This will prevent kinks in the pipe when bending. That is why the bending spring is placed in the pipe before bending. It is a steel spiral spring; the thin spiral form allows you to easily make any bends. For a 90° bend, an elbow fitting is recommended

Basic unit dimensions

Height	11 mm
Length	505 mm
Width	11 mm
Net weight	0.194 kg

Certificates

Applications

Potable water, Heating, Cooling, Compressed air, Underfloor Heating, Gas, Sanitary

Solutions

Building installations, Industry, Underfloor heating, Oil & gas, Utility, Shipbuilding

Technical characteristics

Suitable for aluminium tube	✓	Tube diameter	16 16 Millimetre
Suitable for plastic tube	✓		
Suitable for copper tube	✗		
Suitable for steel tube	✗		
Suitable for stainless steel tube	✗		
Suitable for other tube materials	✗		
With inner cable	✗
