<b>Veiligheid in geval van brand (BWR 2)</b>			
Reactie op brand:	Klasse (A1)		

8. Geëigende technische documentatie en/of specifieke technische documentatie: -

De prestaties van het hierboven omschreven product zijn conform de aangegeven prestaties. Deze prestatieverklaring wordt in overeenstemming met Verordening (EU) nr. 305/2011 onder de exclusieve verantwoordelijkheid van de hierboven vermelde fabrikant verstrekt.

Ondertekend voor en namens de fabrikant door:

Thilo Pregartner, Dr.-Ing.  
Tumlingen, 2020-07-03

Peter Schillinger, Dipl.-Ing.

Deze DoP is opgesteld in meerdere talen. In het geval van geschillen over de interpretatie zal de Engelse tekst altijd prevaleren.

Het aanhangsel bevat vrijwillige en aanvullende informatie in het Engels die de (taal-neutraal gespecificeerde) wettelijke vereisten overschrijdt.

## Specific Part

### 1 Technical description of the product

The Shear connector fischer concrete screw UTRACUT FBS II is a concrete screw made of galvanised steel anchored into a predrilled cylindrical drill hole in existing concrete. The special thread of the concrete screw cuts an internal thread into the member while setting. The fischer concrete screw UTRACUT FBS II is connecting two layers of concrete cast at different times (existing concrete and concrete overlay). The side with head of concrete screw is finally embedded in the concrete overlay.

The product description is given in Annex A.

### 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Existing concrete: - resistances - edge distance and spacing	See Annex C 1 See Annex B 3
Concrete overlay: - resistances - edge distance and spacing	See Annex A 2 and C 2 See Annex B 3
Shear interface parameter under static and quasi-static and fatigue cyclic loading - material and geometric parameters - factor for fatigue cyclic loading	See Annex C 2 No performance assessed

#### 3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1

### 4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with European Assessment Document EAD No. 332347-00-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

# Installed condition

Existing Concrete

Concrete overlay

$h_{nom,ex}$  Overall embedment depth in existing concrete  
 $h_1$  Drill hole depth  
 $h_{ex}$  Thickness of existing concrete  
 $R_t$  Roughness according to EOTA TR 066:2018-11

$h_{ef,ov}$  Effective embedment depth in concrete overlay  
 $h_{nom,ov}$  Overall embedment depth in concrete overlay  
 $h_{ov}$  Thickness of concrete overlay  
 $d_0$  Nominal drill hole diameter

## Specifications of intended use

### Anchorage subject to:

- Static or quasi static actions
- Surface roughness “very smooth” to “very rough” of the shear interface according to EOTA Technical Report TR 066:2018-11

### Base materials:

- For use to strengthen existing concrete by concrete overlay. Both concrete members are compacted reinforced or unreinforced normal weight (cracked and uncracked) concrete without fibres in the range C20/25 to C50/60 according to EN 206:2013+A1:2016.

### Design:

- Anchorages are to be designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the screw is indicated on the design drawings (e.g. position of the screw relative to reinforcement or to supports, etc.).
- Post-installed shear connections are designed in accordance with EOTA Technical Report TR 066:2018-11
- For the concrete overlay the following requirements on the mixture according to TR 066:2018-11, chapter 3.2 apply:
  - Concrete compressive strength of the new concrete shall be higher than the concrete compressive strength of the existing concrete.
  - Use of concrete with low shrinkage is recommended.
  - Slump of fresh concrete  $f \geq 380$  mm, a slump value  $f \geq 450$  mm is recommended, if applicable.
  - Concrete consolidation with vibratory screed. With thickness of the overlay concrete  $> 10$  cm specific vibratory screed must be checked for its maximum working depth.
  - Very good posttreatment.

### Installation:

- The screw installation is executed by trained personal, ensuring that the installation instruction and the specifications by the engineer are observed.
- Hammer drilling, hollow drilling or diamond drilling:  
All sizes and embedment depths
- Screw installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters on site
- Cleaning of drill hole is not necessary when using a hollow drill with functional suction or:
  - If drilling vertically upwards
  - If drilling vertically downwards and the drill hole depth has been increased. It is recommended to increase the drill hole depth with additional  $3 d_0$ .
- The requirements for construction works given in EOTA Technical Report TR 066:2018-11 have to be observed.

# Installation instruction

	<p><b>Step 1: Creation of the drill hole:</b></p> <p>Drill a hole to the required setting depth using a hammer drill bit, hollow drill bit or a diamond drill bit.</p>
	<p><b>Step 2: Cleaning of the drill hole - horizontal:</b></p> <p>Clean the drill hole. This step can be omitted in the preparation of the hole by using a hollow drill bit. (recommendation: use the fischer FHD hollow drill bit)</p>
	<p><b>Step 2: Cleaning of the drill hole - vertical:</b></p> <p>Cleaning of the drill hole can be omitted, if drilling vertically upwards or if drilling vertically downwards and the hole depth has been increased. We recommend increasing the drill hole depth by an additional 3 x drilling <math>\varnothing</math> when drilling vertically downwards.</p>
	<p><b>Step 3: Installation via Impact Wrench:</b></p> <p>Installation with any impact wrench at a max. mentioned torque moment (<math>T_{imp, max}</math>) and with simultaneous axial pressure on the impact wrench. (recommendation: use the fischer FSS 18V 400BL)</p>
	<p><b>Step 4: Installation on the right depth:</b></p> <p>First, install the concrete screw FBS II in the existing concrete to the defined setting depth <math>h_{nom, ex}</math>, while ensuring the desired setting depth <math>h_{ef, ov}</math> is fulfilled in the top concrete layer (for an easy installation it is allowed to use the fischer setting tool SC-ST).</p>
	<p><b>Process after the installation of the screw:</b></p> <p>After installing the concrete screw, further work can be completed on the reinforcements and using the top concrete layer.  <b>ATTENTION:</b> In accordance with TR 066: 2018-11, the requirements for properties of the composite surface and concrete mixture must be observed.</p>
