Productgroup:

Conduct PVbox

The PVbox is assembled using components with unique product properties from rigorously selected manufacturers. It is precisely this combination of products that allows Conduct Technical Solutions BV to offer a technically high-quality end product. Conduct offers the modularly constructed PVbox precisely because of this quality, in compliance with the applicable standards in the field of lightning protection NEN-EN-IEC62305, panel building IEC61439, and installation HD-IEC 60364.

The warranty for the PVbox has two components: product warranty and installation warranty.

- The individual product warranty falls within the original factory warranty provided by the respective manufacturer. This enables Conduct to offer the customer the highest possible functional product warranty.
- With the installation warranty, which is supported by the Metaalunievoorwaarden (Metal Union Terms and Conditions), Conduct provides the highest possible reliability.

Product warranty based on individual factory warranties.
See the references below.

Installation Warranty based on Metal Union Terms and Conditions.
See attachment: Metal Union Terms and Conditions.
