The importance of sunlight

Make the positive effects of sunlight part of your daily showering routine. A healthy dose of sunlight; that is what Sunshower® offers all year round with its warming infrared and low-dose UV light. Sunlight nourishes the body and makes you feel fitter, more vital and energetic.

In this brochure you will find the Sunshower models with the relevant technical information.

Infrared

Warming infrared

Infrared offers many advantages for the body. A wonderfully relaxed feeling, better blood circulation and relief from pain.

Infrared spectrum

The infrared from Sunshower® consists of two wave lengths: the short wave (IRA) and the medium wave (IRB). IRA penetrates deeply into your body and ensures your body warms itself. It improves your blood circulation, which enables waste to be removed more easily. It decreases both muscle tension and joint pain. IRB is absorbed almost entirely by the top layers of your skin, which gives you the warm sensation.

Benefits

- 1** Improved blood circulation and pain relief
- 2** Pleasant heat for the body
- 3** Deep cleaning of the skin

Sunshower PLUS/L Black - Built-in

Increase in oxygen |
increases the removal
of waste

Improved mobility and
less muscle tension

Radiant and
healthy skin

UV light

Low dose UV light

UV light plays an important role in your bodily functions. Low dosed UV light offers many benefits for the immune systems and pigment formation, among other things.

Types of UV light

The UV light from Sunshower® consists of two wave lengths: UVA and UVB. Sunshower® emits 80% UVB light and 20% UVA light. UVB light plays a big role in the production of vitamin D in the skin. UVA light penetrates deeper into the skin and transforms the pigment there into a summery complexion.

Low dose

For Sunshower®, safety is the highest priority. That is why we collaborate closely with medical specialists and we have been doing research on the effects of UV light since 2007. Sunshower® always provides a healthy, safe dose of UV light during your daily shower ritual.

Benefits

- 1** Maintain vitamin D level all year-round
- 2** Positive effect on sense of wellbeing
- 3** Good preparation for the summer sun

Sunshower PLUS/L Black - Built-in

Always a low and safe dose of UV light during your daily shower ritual

One session is equal to 10 minutes of North European summer sun

30 minutes a week doubles the vitamin D level in the winter months
