

Elma B-Scope 900 endoskop

Elma B-Scope 900 is a smart HD video endoscope with a double camera - one camera looks straight and the other 90°, you easily switch between the two cameras with a button on the instrument. B-Scope 900 is suitable for the professional craftsman who wants a decent image quality and a robust, durable design. The large, sharp 3.5" color screen is great for visual inspection. Still images or video with sound are stored on SD cards in HD quality (1280x720 pixels) and easily transferred to PC via USB cable or SD card reader - perfect for subsequent documentation and reporting.

The video endoscope comes with a replaceable rechargeable Li-ion battery, and is ideal for checking and inspecting cavities in walls, machines, motors, ventilation systems, etc. The variable light source can be adjusted from the base unit, which gives the advantage that images and video recordings are not over- or under-exposed – and thus indistinct. The video endoscope can also be connected directly to a monitor via the video output. The standard probe on the Elma B-Scope 900 is 5.5mm in diameter and the length is 1 meter - as an accessory you can buy a 3-meter probe that is also Ø5.5mm and with a double camera.

Elma B-Scope 900 is delivered complete in a robust case incl. Ø5.5mm /1 meter double camera probe, rechargeable Li-ion battery, power supply/charger, mini USB cable, magnet, 8 GB SD memory card and Danish operating instructions.

Technical data:

Borescopes

App:	No
App Type :	Gratis download med mulighed for tilkøb i app, App kræver licens (tilbehør), Betalings-app, købes direkte i devices app-butik
Display :	LCD color
Memory:	Ja
