PEP ecopassport® Product Environmental Profile

BUSCH-BALANCE® AP SURFACE MOUNTING HOUSINGS

ABB Purpose & Embedding Sustainability

ABB is committed to continually promoting and embedding sustainability across its operations and value chain, aspiring to become a role model for others to follow. With its ABB Purpose, ABB is focusing on reducing harmful emissions, preserving natural resources and championing ethical and humane behavior.

General Information

Reference product	2TKA00005511 1-gang surface mounted housing high The content of this PEP cannot be compare with content from another program.
Description of the product	The reference product is 2TKA00005511 1-gang surface mounted housing high, whose dimensions are 53 x 85 x 85 mm. The reference product belongs to Busch-balance ® SI surface mounted housings family, which allows flush-mounted devices to be surface mounted.
Functional unit	Surface mounting housing with IP20 safety system with a reference lifetime of 20 years. Dimensions: 53 x 85 x 85 mm.
Other products covered	The PEP covers other products from Busch-balance AP suface mounted housings family. All the products coverd by this PEP are listed on page 9.

Manufacturing	Includes the environmental impacts associated with the extraction and processing of the raw materials making up the product and its packaging, as well as their transport to the manufacturing site. Additionally, its includes the electricity consumption required for the product assembly and the wastes generated during the manufacturing process.
Distribution	Includes the transportation in its packaging from the manufacturer's last logistics platform to the customer.
Installation	Installation stage includes the manual installation of the products by the customer (no energy consumption is required during installation) and the disposal of the packaging.
Use	Includes the energy consumption due to electrial lossed during the RLT in the customer's locations. Due to the nature of the product, no energy is consumed during the RLT.
End of life	Includes the transportation of the product from the installation site to the final end of life treatment site, as well as the end of life treatment processes. A value of 1,000 km transport by lorry is used for the transportation.
Benefits and loads beyond the system boundaries	Potential for reuse, recovery and/or recycling, expressed as net benefits and impacts

Environmental Impacts

Reference lifetime	20 years
Product category	Other equipments
Installation elements	Manual installation by the customer.
Use scenario	Non-applicable.
Geographical representativeness	Global.
Technological representativeness	Materials and processes data are representative of the production of 2TKA00005511 and other products of its homogeneous environmental Busch-balance® SI surface mounting housings family.
Software and database used	SimaPro 9.5.0.1 & Ecoinvent 3.9
Energy model used	
Manufacturing	Estonian electricity mix
Installation	No energy required.
Use	Non-applicable.
End of life	Product recycling

Extrapolation Factors

For other products than the Reference product covered by this PEP, the environmental impacts for each phase of the lifecycle are obtained by multiplying the values of the Reference product by the following coefficients:

* if the coefficient is "1", the impacts of the phase of the life cycle are assimilated to the Reference product, meaning that the impacts are unchanged in comparison to the Reference product

Environmental Impact Indicator Glossary

Impact indicators

Indicator	Description	Distri- bution
Global warming potential (GWP) - total	Indicator of potential global warming caused by emissions to air contributing to the greenhouse effect. The total global warming potential (GWP-total) is the sum of three sub- categories of climate change. GWP-total = GWP-fossil + GWP-biogenic + GWP- land use and land use change	kg CO₂ eq.
Ozone depletion (ODP)	Emissions to air that contribute to the destruction of the stratospheric ozone layer	kg CFC-11 eq.
Acidification of soil and water (A)	Acidification of soils and water caused by the release of certain gases to the atmosphere, such as nitrogen oxides and sulphur oxides	H+ eq.
Eutrophication (E)	Indicator of the contribution to eutrophication of water by the enrichment of the aquatic ecosystem with nutritional elements, e.g. industrial or domestic effluents, agriculture, etc. This indicator is divided to three: freshwater, marine and terrestrial.	kg P eq., kg N eq., mole N eq.
Photochemical ozone creation (POCP)	Indicator of emissions of gases that affect the creation of photochemical ozone in the lower atmosphere (smog) because of the rays of the sun.	kg NMVOC eq.
Depletion of abiotic resources – elements (ADPe)	Indicator of the depletion of natural non-fossil resources	kg Sb eq.
Depletion of abiotic resources – fossil fuels (ADPf)	The use of non-renewable fossil resources in an unsustainable way (e.g. from material to waste)	MJ (lower heating value)
Water Deprivation potential (WDP)	Deprivation-weighted water consumption. Assesses the potential of water deprivation, to either humans or ecosystems, building on the assumption that the less water remaining available per area, the more likely another user will be deprived.	m³ eq. depr.

Resource use indicators

Indicator	Description	Distri- bution
Total use of primary energy	Total use of non-renewable primary energy resources (primary energy and primary energy resources used as raw materials) + Total use of renewable primary energy re-sources (primary energy and primary energy resources used as raw materials)	MJ (lower heating value)
